1.0 INTRODUCTION

VET Environmental Engineering, LLC (VET) was retained by the City of Bloomington Redevelopment Commission (RDC) to conduct a Further Site Investigation (FSI) for RDC's project located at 226 South College Avenue, Bloomington, Monroe County, Indiana (Site). This FSI presents results of environmental investigations, research, and other information pertaining to the evaluation of environmental conditions at the Site.

The Site is comprised of two land parcels zoned for commercial use. The Site is located on the west side of South College Avenue between West 4th Street and West 3rd Street in Bloomington Township, Bloomington, Monroe County, Indiana (**Exhibit 1**). The Site was previously identified in environmental investigations as 216 South College Avenue and is commonly referred to as College Square. Parcel numbers are included in **Table A** and depicted on **Exhibit 2**.

2.0 SUMMARY OF HISTORICAL INVESTIGATIONS

The Site is currently occupied by a commercial office building. Pursuant to planned redevelopment of the Site, RDC commissioned environmental investigations at the Site as a due diligence measure. VET was retained by RDC to coordinate further investigation, remedy implementation, and ultimately Site closure through the Indiana Finance Authority (IFA) Brownfields Program (Brownfields). Summaries of reports reviewed as a part of this FSI are included in *Section 2.1* through *Section 2.4*.

2.1 Phase I ESA – BCA Environmental Consultants, May 29, 2019

BCA Environmental Consultants (BCA) conducted a Phase I Environmental Site Assessment on behalf of the City of Bloomington Office of Economic & Sustainable Development dated May 29, 2019 (PI-2019, **Attachment 1**). The following recognized environmental conditions (RECs) related to the Site were identified in the PI-2019:

- *"The historical presence of a rail spur on the western portion of the [Site] along with coal storage piles is a REC."*
- *"The historical presence of two gasoline filling stations that operated on the north-central and north-eastern portions of the [Site] from the 1920s through at least the late 1940s with no documentation of proper closure is a REC."*

- *"The historical presence of two (2) battery and ignition service stations in the north-central portion of the [Site] from the 1920s through at least the late 1940s, with no information on the operations that took place. Possible chemical releases associated with the historical battery service stations on site are a REC."*

- *"Vulcanizing activities were reported to historically have been present on the [Site]. These activities are associated with the use of many different chemicals, including potential [volatile organic compounds (VOCs)], [polycyclic aromatic hydrocarbons (PAHs)], and metals. As such, this is a REC."*

- *"The presence of a trench drain and suspected oil/water separator (or grease trap) observed on the northwest portion of the Subject Site is a REC."*

- *"Former Central Indiana Lighting & Gas Works, 302 W. 3rd Street (aka Indiana Gas Company, Inc., 205 S. Madison Street) – [the] historical use of this property, adjoining the [Site] to the west across the B-Line Trail, as a manufactured gas plant site, is a REC, especially since it is directly upgradient from the [Site] with respect to measured groundwater flow direction."*

The PI-2019 also identified several de minimis conditions associated with the Site. Based on the conclusions of the PI-2019, BCA recommended performing soil and groundwater investigation at the Site to evaluate whether impacts exist from the RECs identified.

2.2 Phase II Environmental Site Investigation – BCA Environmental Consultants, July 3, 2019

BCA conducted a Phase II Environmental Site Assessment in 2019 (PII-2019) (**Attachment 2**) to address recognized environmental conditions (RECs) from PI-2019. The PII-2019 was performed on behalf of City of Bloomington Office of Economic & Sustainable Development. A geophysical survey was performed prior to drilling activities, during which potential buried utilities, subsurface anomalies, and the suspected former UST locations were marked with paint. Five soil borings were advanced on May 16, 2019 (SP-1 through SP-5). The locations of the BCA PII-2019 investigative points are depicted on **Exhibits 4** and **5** of this FSI.

Nine soil samples were analyzed for VOCs, 12 soil samples were analyzed for PAHs, and 11 soil samples were analyzed for a list of 14 metals. Six additional soil samples were submitted for analysis of arsenic following receipt of initial metals results. Four groundwater samples were analyzed for VOCs, PAHs, and the list of 14 metals. Three of the groundwater samples were submitted for analysis of hexavalent chromium. Based on the initial groundwater results, one field filtered sample was analyzed for arsenic, and one field filtered sample was analyzed for lead and arsenic.

Bedrock beneath the Site was encountered between approximately 8.2 and 18.8 feet below ground surface (bgs). BCA concluded that based on groundwater elevation data collected during the PII-2019, groundwater flow direction was to the east. However, based on readily available data for adjoining sites and topographic contours in the vicinity of the Site, groundwater flow is likely to be to the south-southeast.

Analytical results were compared to IDEM screening criteria available at the time in accordance with the 2012 Remediation Closure Guide (RCG). Benzene, 1,2,4-trimethylbenzene, 1,3,5-trimethylbenzene, naphthalene, arsenic, and thallium identified in soil above the RCG screening levels (SLs) published at the time. IDEM since revised the RCG. The concentrations of benzene, 1,2,4-trimethylbenzene, 1,3,5-trimethylbenzene, and naphthalene in soil identified during the PII-2019 are below the current applicable Risk-based Closure Guide (R2) IDEM published levels (PLs). The concentrations of arsenic and thallium in soil identified during the PII-2019 exceed the current Long-Term Residential PLs. Benzene, 1-methylnaphthalene, naphthalene, arsenic, and lead were identified in groundwater above the RCG SLs published at the time. Concentrations of benzene, 1-methylnaphthalene, naphthalene, arsenic, and lead in groundwater identified in the PII-2019 exceed the current Long-Term Residential PLs.

VOC and PAH concentrations in soil and groundwater were highest in the vicinity of the historic USTs. Metals impacts were identified throughout the Site in soil. However, metals concentrations in groundwater were primarily identified on the eastern portion of the Site. Based on the results of the PII-2019, BCA recommended further investigation of petroleum constituents identified at the Site, and to employ land-use restrictions to eliminate exposure pathways to contamination identified at the Site.

2.3 Phase I ESA – BCA Environmental Consultants, May 31, 2023

BCA prepared a Phase I ESA for the Site dated May 31, 2023 (PI-2023) on behalf of the City of Bloomington Redevelopment Commission (**Attachment 3**). The PI-2023 identified the following RECs and vapor encroachment conditions (VECs) associated with the Site:

- *"The detection of elevated concentrations of petroleum related compounds in the soil and groundwater at the [Site] during the Phase II ESA in 2019 is a REC and a VEC."*
- *"The historical utilization of the [Site] as a gasoline filling station that operated on the [Site] with multiple gasoline tanks from the 1920s through at least the late 1950s with no documentation of proper closure is a REC and a VEC."*
- *"The historical presence of a battery and ignition service station on the [Site] in the late 1940s, with no information of the operations is a REC."*

The PI-2023 also identified several de minimis conditions related to the Site. BCA recommended further investigation at the Site to address the RECs and VECs identified in the PI-2023.

2.4 Phase II Environmental Site Investigation – BCA Environmental Consultants, September 30, 2024

BCA prepared a Supplemental PII-ESA at the Site dated September 30, 2024 (SPII-2024) on behalf of the Bloomington Redevelopment Commission (**Attachment 4**) to investigate the RECs identified in the PI-2023. A limited geophysical study was performed prior to drilling activities to identify potential buried utilities, subsurface anomalies, and to attempt to locate possible USTs. No evidence of USTs was reported based on the results of the limited geophysical study.

Seven soil borings were advanced on July 10, 2024 (SP-3R, and SP-6 through SP-11). The locations of the BCA SPII-2024 investigative points are depicted on **Exhibits 4** and **5** of this FSI. Eight soil samples were collected and analyzed for VOCs, and 12 soil samples were collected and analyzed for PAHs. Five groundwater samples were analyzed for VOCs and PAHs, and six groundwater samples were analyzed for arsenic and lead. Bedrock beneath the Site was encountered between approximately 10 and 18 feet bgs. BCA concluded that local groundwater flow direction is to the south or southeast, however a Site-specific groundwater flow direction based on data obtained during the PII-2024 is not provided. Analytical results were compared to 2024 R2 PLs. No concentrations of VOCs or PAHs in soil exceeded the R2 PLs. Benzene, 1-methylnaphthalene, naphthalene, arsenic, and lead concentrations identified in groundwater exceeded the Long-Term Residential PLs.

Based on the results of the PII-2019, BCA concluded that soil impacts are concentrated between depths of approximately six feet and 12 feet on the northeastern portion of the Site in the location of the former filling station and associated USTs. BCA concluded that benzene and PAH impacts in shallow groundwater at the Site are likely attributable to a petroleum source associated with the historical filling station and USTs. BCA concluded that the levels of arsenic and lead in groundwater may be attributable to sediment in the filtered samples, however the historical use of the Site as a filling station may also have contributed to elevated metals concentrations in shallow groundwater.

Based on evaluation of analytical results from the PII-2019 and PII-2024, BCA recommended mitigating potential exposure to contaminated soil at the Site via institutional controls, establishment of an IDEM-approved Site average for constituents identified, or removal of impacted soil. BCA recommended implementing institutional controls to mitigate exposure to impacted groundwater at the Site, as groundwater is not used for consumptive purposes at the Site.

In addition to the recommended controls to mitigate exposure to identified contaminants, BCA recommended *"further investigation to delineate petroleum impacts in soil and groundwater; further investigation to confirm the groundwater metal impacts detected at SP-10 and SP-11 are in dissolved or mobile phase; if future land use includes a building on the northeast corner of the [Site], conduct a limited soil gas survey in that area; [and] in lieu of further investigation, develop a plan for Site remediation. Remediate impacts or restrict future land use through an Environmental Restrictive Covenant (ERC) with a Soil Management Plan (SMP) (or another administrative tool) to eliminate potential exposure pathways to impacted soil and groundwater."*

3.0 RESPONSE TO COMMENTS

VET was retained by RDC coordinate further investigation, remedy implementation, and ultimately Site closure with Brownfields. VET submitted the above-referenced historical reports for review by Brownfields. Brownfields issued informal comments via email regarding activities at the Site on November 24, 2025. VET's responses to IFA's comments are detailed below:

In the September 2024 Supplemental Phase II ESA the following were recommended by BCA, which the Program agrees with:

1. *Further investigation to delineate petroleum impacts in groundwater.*

   Response: Understood. VET performed the FSI to further delineate groundwater impacts at the Site.

2. *Further investigation to confirm the groundwater metal impacts detected at SP-10 and SP-11 are in a dissolved phase.*

   Response: Understood. VET's FSI included analysis of lead and arsenic in groundwater samples. Groundwater samples submitted for metals analysis were field filtered to obtain data representative of dissolved-phase contaminants in groundwater.

3. *If future land use includes a building on the northeast corner of the Site, conduct a limited soil gas survey in that area.*

   Response: VET planned to conduct a limited soil gas survey as part of the FSI activities. VET encountered evidence that USTs may still be present in the subsurface during FSI activities. Based on conversations with RDC, VET is developing a remediation plan for the Site that will include removal of soil and any USTs, if present, on the northeast portion of the Site. As such, a soil gas survey was determined to be pre-emptive based on the planned remediation at the Site.

The Program comments on and requests the following:

4. *Include depths to groundwater for which groundwater samples were collected in future reports. Including an updated version of the September 2024 Phase II ESA with depths to groundwater would also be beneficial.*

   Response: VET recorded depths to groundwater on the FSI soil boring logs included in **Attachment 6**. Groundwater flow direction based on data obtained during the FSI is depicted on **Exhibit 5**.

5. *Petroleum release related chemicals (RRCs) in soil are delineated. 1-methynaphthalene is not a risk driver and given the depths at which it remains detected in soil above its R2 RSPL during the July 2024 sampling event, I do not foresee the need for a soil restriction and/or soil management plan at this time, unless future data suggest otherwise.*

   Response: Understood.

6. *Groundwater impacts need further delineation. A site-specific groundwater flow direction has yet to be provided. The additional proposed investigation needs to provide a potentiometric surface map that clearly provides a groundwater flow direction. This information is needed to characterize contamination at the Site and its extent and to determine potential ERC(s). The Program infers groundwater flow is to the south.*

   Response: VET recorded depths to groundwater on the FSI soil boring logs included in **Attachment 6**. Groundwater flow direction based on data obtained during the FSI is depicted on **Exhibit 5**.

4.0 FURTHER SITE INVESTIGATION ACTIVITIES

VET was retained by RDC to conduct this FSI to address comments issued by IFA discussed in *Section 3.0* of this report. A utility locate request was submitted prior to commencement of FSI activities. VET representatives Ms. Sara Hamidovic, MS, PE, CHMM, CPESC and Ms. Mia Keller conducted FSI activities at the Site on February 23, 2026. VET's FSI activities were uninhibited by weather conditions.

4.1 Soil Sampling Rationale, Methodology, and Protocols

VET and personnel with Strata Environmental Contractors, LLC (Strata), the drilling subcontractor, advanced five soil borings (VB-1 through VB-5) at the Site on February 23, 2026 utilizing a track-mounted Geoprobe® 7822DT direct push technology (DPT) drill rig. Concrete refusal was encountered at three attempted boring locations in the vicinity of VB-4 (VB-4A through VB-4C). Concrete refusal was also encountered at two attempted boring locations in the vicinity of VB-5 (VB-5A and VB-5B). Soil cores were collected continuously, visualized, and logged by Ms. Hamidovic. Soil samples collected during field sampling activities were classified in the field in accordance with the Unified Soil Classification System (USCS). Soil boring logs with soil classification, color (identified with Munsell Color Chart), moisture, and conditions including the presence of staining and atypical odors are included in **Attachment 6**. Based on Site conditions identified during the FSI, VET submitted a report to the IDEM Spill Response Hotline that the historic USTs may still be present in the subsurface.

Sample depth intervals within each boring were selected as an expected worst-case scenario based upon a combination of visual, olfactory, and field screening observations. Field screening was conducted with a PID by exposing soil from specified depth intervals placed in dedicated Ziplock bags to segregate depth intervals. Following field screening activities, media was transferred to laboratory-supplied sampling jars. Field screening results are recorded on soil boring logs (**Attachment 6**).

Soil boring locations were selected to provide soil and groundwater data representative of the areas of concern on the Site. Soil boring VB-1 was advanced at the far northeast corner of the Site along the eastern Site boundary. VB-1 was advanced to the northeast of the northernmost suspect UST location that is the presumed contaminant source. Soil boring VB-1 was advanced in a location

intended to further delineate soil and groundwater impacts at the Site related to the on-Site source. VB-1 was advanced to an approximate depth of 12 feet bgs and was terminated on the weathered limestone bedrock interface. A soil sample was collected from the 10-foot to 12-foot depth interval (VB-1 (10'-12')) due to the presence of a strong petroleum odor and saturated soil conditions. A duplicate sample (VB-DUP-1) was collected from the 10-foot to 12-foot depth interval. A temporary monitoring well was installed at VB-1 (MW-1) on February 23, 2026. A groundwater sample was collected on February 23, 2026. Discussion of groundwater sampling methodology is included in **Section 4.2**.

Soil boring VB-2 was advanced along the eastern Site boundary to the south of the southernmost suspect UST location. Soil boring VB-2 was advanced in a location intended to further delineate soil and groundwater impacts at the Site related to the on-Site source. VB-2 was advanced to an approximate depth of 16 feet bgs and was terminated on the weathered limestone bedrock interface. A soil sample was collected from the 10-foot to 12-foot depth interval (VB-2 (10'-12')) due to the presence of a petroleum odor and saturated soil conditions. A minor petroleum odor was also identified at the weathered limestone bedrock interface at the 15' – 16' depth interval. A temporary monitoring well was installed at VB-2 (MW-2) on February 23, 2026. A groundwater sample was collected on February 23, 2026. Discussion of groundwater sampling methodology is included in **Section 4.2**.

Soil boring VB-3 was advanced on the northeast portion of the Site, to the west of the suspect UST locations. Soil boring VB-3 was advanced in a location intended to further delineate soil and groundwater impacts at the Site related to the on-Site source. VB-3 was advanced to an approximate depth of 11.5 feet bgs and was terminated on the weathered limestone bedrock interface. A soil sample was collected from the 10-foot to 11.5-foot depth interval (VB-3 (10'-11.5')) due to the presence of a petroleum odor and saturated soil conditions. A temporary monitoring well was installed at VB-3 (MW-3) on February 23, 2026. A groundwater sample was collected on February 23, 2026. Discussion of groundwater sampling methodology is included in **Section 4.2**.

Soil boring VB-4 was advanced on the southeast corner of the Site. VET attempted soil boring and encountered concrete refusal in three locations (VB-4A through VB-4C) prior to encountering suitable drilling conditions at VB-4. Soil boring VB-4 was advanced in a location intended to further delineate soil and groundwater impacts at the Site related to the on-Site source. VB-4 was advanced to an approximate depth of 16 feet bgs and was terminated due to an obstruction in the subsurface that deflected the Geoprobe tooling equipment. A soil sample was collected from the 10-foot to 12-foot depth interval (VB-4 (10'-12')) due to the presence of saturated soil conditions. A temporary monitoring well was installed at VB-4 (MW-4) on February 23, 2026. A groundwater sample was collected on February 23, 2026. Discussion of groundwater sampling methodology is included in **Section 4.2**.

Soil boring VB-5 was advanced on the southwest corner of the Site. VET attempted soil boring and encountered concrete refusal in two locations (VB-5A and VB-5B) prior to encountering suitable drilling conditions at VB-5. Soil boring VB-5 was advanced in a location intended to further delineate soil and groundwater impacts at the Site. Soil boring VB-5 was advanced in a location expected to be downgradient with respect to groundwater flow from the former Indiana Gas Plant and the historic on-Site coal and lime storage areas. VB-5 was advanced to an approximate depth of nine feet bgs and was terminated at the weathered limestone bedrock surface. A soil sample was collected from the six-foot to eight-foot depth interval (VB-5 (6'-8')) due to the presence of saturated soil conditions. A temporary

monitoring well was installed at VB-5 (MW-5) on February 23, 2026. MW-5 was dry throughout the duration of investigative activities on February 23, 2026, therefore no groundwater sample was collected.

VOC samples were collected first to minimize the loss of VOCs to the atmosphere through volatilization. Surface soil samples were collected utilizing Method 5035 for VOCs and traditional methodology for the balance of the parameters. Method 5035 samples were collected by advancing 5g Terra Core samplers directly into the soil to be sampled and placing individual aliquots directly into laboratory-supplied (one Methanol preserved and two unpreserved) 40mL vials.

Soil jars (moisture and balance of parameters) were filled by placing soil directly into laboratory-supplied, certified clean, glass soil jars. VET used new, dedicated disposable equipment for all samples collected. New nitrile gloves were donned for each sample. Non-dedicated equipment was decontaminated between samples utilizing an Alconox detergent and tap water rinse in a stainless-steel wash bucket. All disposable equipment was discarded at the completion of each sampling point and replaced with fresh equipment.

Soil samples were subsequently packed in iced coolers and shipped via FedEx to Test America Laboratories in Tinley Park, Illinois under strict chain of custody documentation. One trip blank and matrix spike and matrix spike duplicate (MS/MSD) were submitted with the soil samples shipped to Test America on February 23, 2026. All soil samples were analyzed for the following constituent groups under each respective USEPA method of analysis:

TABLE B. SOIL ANALYTICAL PARAMETERS		
Parameter	**Abbreviation**	**Method**
Volatile Organic Compounds to include lead scavengers	VOCs	USEPA 8260D
Polycyclic Aromatic Hydrocarbons	PAHs	USEPA 8270E
Lead and Arsenic	Pb and As	USEPA 6010D

4.2 Groundwater Sampling Rationale, Methodology, and Protocols

A total of five temporary monitoring wells were installed at the Site (MW-1 through MW-5) on February 23, 2026. The temporary wells were co-located with soil borings VB-1 through VB-5, respectively. Temporary wells were constructed by installing clean, 0.1-inch slotted polyvinyl chloride (PVC) screens, and 1-inch PVC riser pipes to the base of the soil borings. Screen lengths were selected based on depth to water and were generally installed across the saturated-unsaturated soil interface based on visual observations of the moisture content of the extracted soil.

Wells were installed and allowed time to equilibrate with normal air pressure prior to performing initial water elevation measurements. Depth to groundwater was determined using a QED Model MP30 Micropurge© Drawdown/Water Level Meter. The water level probe and groundwater-exposed measurement tape were decontaminated with an Alconox solution followed by a tap water rinse between each water level measurement. VET collected depth to water level measurements from the north side of each temporary monitoring well. Depth to water (from top of casing) was recorded at each well and used to calculate groundwater elevations (**Attachment 6**).

Groundwater sample collection was attempted at all temporary monitoring wells. Groundwater was not encountered at MW-5, therefore no sample was collected in this location. Groundwater sampling was conducted utilizing best practical methods to minimize disturbance and obtain

representative groundwater samples. Groundwater was collected utilizing dedicated ¼" low-density polyethylene (LDPE) tubing lowered into each well. LDPE tubing was affixed to a short, dedicated section of nylon tubing connected to a GeoTech peristaltic pump. The peristaltic pump was set to a low flow rate of approximately 500 milliliters per minute (mL/min) to minimize agitation of samples collected from temporary piezometers.

Sampling groundwater from temporary wells can be problematic in the presence of silty soils where soil particles are suspended in the water column. The presence of suspended sediment can cause metals results in laboratory analysis to be biased high. These results are at least partially attributable to metals associated with suspended particles and are not fully representative of metals dissolved in the groundwater. As this is a known challenge and in presence of suspended sediment content on this Site, VET submitted filtered groundwater samples from each temporary well for laboratory analysis. Groundwater samples were analyzed for VOCs, PAHs, lead, and arsenic.

Groundwater samples were collected in clean, laboratory-supplied containers directly from the dedicated nylon tubing affixed to the dedicated LDPE tubing extended into the well. Groundwater samples analyzed for lead and arsenic were field filtered using the peristaltic pump and dedicated 0.45-micron (µm) filters. Metals samples were field filtered to reduce suspended sediment present in the sample.

Temporary wells were abandoned subsequent to sample collection by extracting the PVC risers and slotted well screens and pouring bentonite chips into the soil boring cavity. Groundwater samples were collected in clean, laboratory-supplied containers and shipped to Eurofins Laboratory for analysis of the parameters listed in **Table C**.

TABLE C. GROUNDWATER ANALYTICAL PARAMETERS

Parameter	Abbreviation	Method
Volatile Organic Compounds	VOCs	USEPA 8260D
Polycyclic Aromatic Hydrocarbons	PAHs	USEPA 8270E
Lead and Arsenic	Pb and As	USEPA 6010D

5.0 ANALYTICAL RESULTS

Soil laboratory analytical results are tabulated in **Table 1**. Groundwater analytical results are tabulated in **Table 2**. The Level II analytical reports are included in **Attachment 6**. The Level IV QA/QC reports are available upon request. Analytical results are compared to 2025 IDEM Risk-Based Closure Guide (R2) Published Levels (PLs). 2026 PLs were not published as of the date of this writing. IDEM R2 PLs represent concentrations of chemicals in soil, groundwater, or vapor that the IDEM Office of Land Quality (OLQ) has determined are acceptable under specific exposure scenarios, including residential, commercial/industrial, and construction worker exposures.

5.1 Soil Lithology

Site soils are mapped as Udorthents, Loamy (100%) (**Exhibit 3**). Udorthents, Loamy is not included on the Hydric Soils List for Monroe County. Udorthents, Loamy soils are typically cut-and-filled, with a wide range of drainage and permeability qualities. Site soils observed were predominantly composed of clay. Lithologic descriptions are included on the boring logs in **Attachment 6**.

5.2 Soil Analytical Results

Subsurface soil analytical results are compared to IDEM R2 PLs for long-term residential, long-term commercial/industrial, and short-term soil excavation exposure scenarios. Soil analytical results are tabulated in **Table 1**. Soil sample locations are displayed graphically on **Exhibit 4**.

5.2.1 VOCs

VOCs are compounds that exhibit a high vapor pressure and are emitted as gases from certain solids or liquids. The list of VOCs investigated and analyzed as part of the FSI-2024 includes a variety of chemicals that can have both short- and long-term health effects on both humans and ecological receptors. VOCs are included in a myriad of manmade products including but not limited to paints and lacquers, paint thinners and strippers, hydraulic fluids, cleaning supplies, refrigerants, dry cleaning agents, pesticides, building materials and furnishings, copiers and printers, glues and adhesives, byproducts from the drinking water chlorination process, and petroleum products. All of these products can release organic compounds while in use, but can also cause contamination in soil, groundwater, and can emit potentially harmful vapors when released to the environment.

Select VOCs were detected above laboratory reporting limits in soil samples VB-1 (10'-12'), VB-2 (10'-12'), VB-3 (10'-12'), VB-4 (10'-12'), VB-5 (6'-8') and the duplicate sample (VB-DUP-1) co-located with VB-1 (10'-12'). All detections of VOCs were at concentrations below all of the 2025 IDEM R2 PLs.

5.2.2 PAHs

PAHs are a class of chemicals that occur naturally in coal, crude oil, and gasoline but are also produced during incomplete combustion of organic substances. PAHs are generated when burning fossil fuels as in motor vehicle exhaust, burning garbage, smoking tobacco, eating charred or grilled meats, burning wood, and in fumes from asphalt roads. Many PAHs are considered to be cancer-causing in both humans and ecological receptors.

Select PAHs were detected above laboratory reporting limits in soil samples VB-1 (10'-12'), VB-2 (10'-12'), VB-3 (10'-12'), and the duplicate sample (VB-DUP-1) co-located with VB-1 (10'-12'). The concentration of 1-methylnaphthalene (0.44 milligrams per kilogram (mg/kg)) exceeded the Long-Term Residential PL of 0.3 mg/kg. All other concentrations of PAHs in these samples were below IDEM PLs. No detections of PAHs above laboratory reporting limits were reported in samples VB-4 (10'-12'), or VB-5 (6'-8').

5.2.3 Lead and Arsenic

Lead is a naturally occurring, bluish-gray metallic element. It is reported that the amount of lead in the environment today is over 100 times greater than in prehistoric times. Humans have extracted lead from the Earth's crust for thousands of years and for countless anthropogenic applications increasing the amount of lead in the surficial environment. The increased presence of lead in the environment has increased human exposures to lead through time. The United States uses about 50 percent of the world's lead. Lead has a number of modern commercial and industrial uses to include the production of chemicals, paints, glazes, dyes, insecticides, solder, plumbing, ammunition, explosives, match heads, fishing sinkers, divers' suits and shoes, radioactive shielding, pewter

products, and gasoline (Leonard, 2009).

Arsenic occurs naturally in southern Indiana soils, and specifically Bloomington soils, at levels that often exceed the most conservative IDEM R2 PLs. IDEM's Office of Land Quality Fact Sheet titled "Arsenic in Soils" indicates that background concentrations of arsenic may exceed the residential soil PL of 10 mg/kg. As such, it is VET's opinion, based on experience and published documentation, that ubiquitous presence of arsenic on a site in southern Indiana is likely attributable to a naturally occurring condition. This does not, however, discount relevance of the PLs published by IDEM, nor does it suggest that naturally occurring arsenic poses any less risk than that from an anthropogenic source. The argument that arsenic is naturally occurring serves to communicate challenges with regard to remedy selection and implementation due to its widespread nature.

Arsenic was detected above laboratory reporting limits in soil samples VB-1 (10'-12'), VB-2 (10'-12'), VB-3 (10'-12'), VB-4 (10'-12'), VB-5 (6'-8') and the duplicate sample (VB-DUP-1) co-located with VB-1 (10'-12'). The concentrations of arsenic in samples VB-1 (10'-12') (13 mg/kg), (VB-DUP-1) (12 mg/kg), and VB-5 (6'-8') (20 mg/kg) exceeded the Long-Term Residential PL of 10 mg/kg, but were generally consistent with background levels.

Lead was detected above laboratory reporting limits in soil samples VB-1 (10'-12'), VB-2 (10'-12'), VB-3 (10'-12'), VB-5 (6'-8') and the duplicate sample (VB-DUP-1) co-located with VB-1 (10'-12'). The concentrations of lead identified in these samples were all below the applicable IDEM PLs.

5.3 Groundwater Analytical Results

Groundwater analytical results are compared to the IDEM R2 PLs for the long-term residential groundwater exposure scenario. The long-term residential groundwater PLs are the only available screening criteria. These PLs are most applicable to sites where groundwater obtained from on-site wells is used for drinking, showering, cooking, etc. Groundwater analytical results are tabulated in **Table 2**. Groundwater sample locations are displayed graphically on **Exhibit 5**.

5.3.1 VOCs

Select VOCs were detected above laboratory reporting limits in all groundwater samples collected during the FSI. The concentrations of VOCs identified in samples MW-1, the duplicate sample co-located with MW-1 (MW-DUP-1), and MW-4 were all below the Long-Term Residential PLs. The concentrations of benzene in samples MW-2 (180 micrograms per liter (µg/L)) and MW-3 (41 µg/L) exceeded the Long-Term Residential PL of 5.0 µg/L. The concentration of methylcyclohexane in sample MW-2 (250 µg/L) exceeded the Long-Term Residential PL of 200 µg/L.

Laboratory reporting limits for select VOCs exceed the applicable IDEM R2 PLs for samples collected during the FSI. According to an IDEM memorandum dated January 16, 2013, there are instances known to the agency where PLs may be lower than achievable laboratory reporting limits using standard analytical methodologies. If IDEM deems it necessary, the agency may request the use of "non-routine" USEPA analytical methods. Based on evaluation of historical investigations at the Site and the results of the FSI, it is VET's professional opinion additional analysis to reconcile this discrepancy is not warranted.

5.3.2 PAHs

Select PAHs were detected above laboratory reporting limits in samples MW-2 and MW-3. The concentrations of 1-methylnaphthalene at MW-2 (14 µg/L) and MW-3 (12 µg/L) exceeded the Long-Term Residential PL of 0.06 µg/L. All other PAHs were either reported at concentrations below the Long-Term Residential PL or below laboratory reporting limits.

Laboratory reporting limits for select PAHs exceed the applicable IDEM R2 PLs for samples collected during the FSI. Based on evaluation of historical investigations at the Site and the results of the FSI, it is VET's professional opinion additional analysis to reconcile this discrepancy is not warranted.

5.3.3 Lead and Arsenic

Arsenic was detected above laboratory reporting limits in sample MW-DUP-1. The concentration of arsenic in sample MW-DUP-1 (21 µg/L) exceeded the Long-Term Residential PL of 10 µg/L. Arsenic was not detected above laboratory reporting limits in any of the remaining samples collected during the FSI.

Lead was detected above laboratory reporting limits in samples MW-1 and MW-DUP-1. The concentration of lead in sample MW-DUP-1 (23 µg/L) exceeded the Long-Term Residential PL of 10 µg/L. The concentration of lead in sample MW-1 was below the Long-Term Residential PL. Lead was not detected above laboratory reporting limits in any of the remaining samples collected during the FSI.

6.0 DISCUSSION

The R2 is IDEM's system for describing selected approaches to investigation and risk-based closure of contaminated or potentially contaminated sites as prescribed in Indiana Code (IC). VET evaluated all applicable exposure scenarios, including the soil direct contact exposure scenario for construction workers developing the Site, long-term commercial use, and long-term residential exposure scenario for future users of the Site.

6.1 Soil

Analytical results from the FSI and previous Site investigations indicate that soil VOC, PAH, and metals impacts exist at the Site. Petroleum contaminants of concern (COCs) are present primarily on the northeastern portion of the Site in the vicinity of the former filling station and USTs. Arsenic impacts in soil are consistent with background concentrations. However, the presence of arsenic in soil above the Long-Term Residential PL warrants implementation of institutional or engineering controls to mitigate exposure to arsenic in soil for workers developing the Site and for long-term residential or commercial occupants. VET recommends development and implementation of a Site-specific SMP to address elevated levels of arsenic in soil.

Areas where soil COCs are present at the Site are currently paved, therefore no immediate risk of exposure to on-Site occupants exists. Based on Site conditions observed, VET recommends implementing a remedial strategy to mitigate exposure to petroleum impacts in soil for workers developing the Site and for long-term residential or commercial occupants.

6.2 Groundwater

Analytical results from the FSI and previous Site investigations indicate that groundwater VOC, PAH, and metals impacts exist at the Site. Petroleum COCs are present in groundwater primarily on the northeastern portion of the Site in the vicinity of the former filling station and USTs. Based on groundwater elevation data collected during the FSI, groundwater flow across the Site is toward the southeast. Benzene and methylcyclohexane were identified above the Long-Term Residential PLs along the eastern boundary of the Site (MW-2). COCs were not identified above laboratory reporting limits at the southeasternmost downgradient well on-Site (MW-4).

Groundwater impacts were identified below IDEM PLs in delineation samples collected at the northeastern and southeastern corners of the Site. Groundwater impacts above IDEM PLs are present along the eastern Site boundary adjoining the public right-of-way (ROW) and South College Avenue. Data suggest that the groundwater plume at the Site terminates prior to reaching the southeastern corner or migrates off-Site to the east. The Site and adjoining properties are serviced by the City of Bloomington Utilities Department. Groundwater is not used for consumptive purposes in this area of Bloomington. Several unlocated wells are mapped by the Indiana Department of Natural Resources (IDNR) Water Well Viewer within one mile and to the southeast of the Site. These downgradient wells were installed between the 1950s and 1970s and were installed between 42 feet bgs and 175 feet bgs. Based on the years of installation, depth, and uncertainty with respect to their actual location, it is not likely that groundwater is used for consumptive purposes downgradient of the Site.

VET recommends further investigations and/or remedial measures to address petroleum impacts on the northeastern portion of the Site to remove the soil source contributing to groundwater impacts. VET further recommends considering implementation of institutional controls to prevent groundwater use at the Site.

6.3 Vapor

Investigations into vapor on the Site were not formally conducted. The concentrations of petroleum COCs, specifically benzene, indicate the vapor exposure pathway warrants additional investigation or remedy. Based on evidence suggesting USTs may remain at the Site, additional investigation or remedy is warranted following source removal activities.

The Site is located in Radon Zone 1. Radon is a naturally-occurring gas that is not associated with the identified COCs in soil and groundwater at the Site. Radon was not investigated as part of this FSI. VET recommends existing structures along with future developments on the Site be appropriately tested, mitigated, and/or constructed utilizing radon resistant new construction (RRNC) technology to prevent intrusion of radon. An appropriately designed and constructed radon mitigation system also serves as a vapor mitigation system reducing intrusion of both radon gas and volatile vapors associated with releases of VOCs. VET recommends installation of an appropriate radon/vapor mitigation system constructed in accordance with applicable standards.

7.0 CONCLUSIONS AND RECOMMENDATIONS

The FSI was not an exhaustive study but rather an evaluation that sought to further delineate environmental conditions at the Site. The FSI was designed based on IFA's comments and Site conditions that might influence decision-making with respect to planned development. The FSI did not evaluate vapor intrusion in the existing structures, nor did it serve to identify potentially harmful conditions associated with other out of scope considerations such as radon gas intrusion.

Historic Site investigations and IFA recommendations were used to guide sampling locations while field screening readings were used to guide sample depth interval selection at each location. Sample locations were further selected based on field observations at the Site. Sample locations were placed in areas that serve to further delineate impacts at the Site. Based on analytical results and Site observations, a release exists in the area of the former fueling station and USTs at the northeast corner of the Site. Based on Site conditions identified during the FSI, VET submitted a report to the IDEM Spill Response Hotline that the historic USTs may still be present in the subsurface. VET recommends that RDC retain experienced environmental counsel to evaluate reporting requirements based on the results of the FSI. A copy of the Indiana Spill Rule is included in **Attachment 8**. Based on work at the Site and the findings of this FSI, further investigation, remediation, and or implementation of institutional/engineering controls are warranted.

VET appreciates the opportunity to provide environmental consulting services for RDC. If you have any questions or concerns, please do not hesitate to contact VET at (812) 822-0400.

Respectfully submitted,

Sara R. Hamidovic, MS, PE, CHMM, CPESC
President/CEO, Principal Engineer

RE: Phase I Environmental Site Assessment
Commercial Building
216 S. College Ave.
Bloomington, Indiana 47404
BCA Project No. 8131/19-132

Dear Mr. Payne:

Please find enclosed for your review an electronic (PDF) copy of the Phase I Environmental Site Assessment report that we recently completed for City of Bloomington on the referenced property. Should you have any questions regarding the findings of this report or should you need additional information, please do not hesitate to contact us at (317) 578-4233.

Sincerely,

Leonard D. Hinrichs II, LPG
Business Development Manager

H. City Directory Search

1.0 SUMMARY

BCA Environmental Consultants, L.L.C. (BCA) has performed a Phase I Environmental Site Assessment (ESA) of the Commercial property located at 216 S. College Avenue, Bloomington, Monroe County, Indiana 47404 (Subject Site). The work was conducted within the framework of the ASTM 1527-13 and the All Appropriate Inquiry (AAI) Standards. The Subject Site is bounded by commercial and municipal properties.

Environmentally significant information pertaining to the Subject Site and surrounding area that was found during the course of this investigation includes:

1. Commercial Building (Subject Site), 216 S. College Avenue
   The Subject Site was historically a former livery and lime, coal, and lumber storage facility from the early 1880s through at least 1913; the location of filling stations and battery & ignition service shops from before 1927 until sometime after 1947; and a costume shop, financial and law offices since before 1963 to the present. The property is located along a former main railroad line (adjoining to the west) until it was converted into the B-Line rail trail in the early 2010s.

   - The historical presence of a rail spur on the western portion of the Subject Site along with coal storage piles is an environmental concern.
   - The historical presence of two gasoline filling stations that operated on the north-central and north-eastern portions of the Subject Site from the 1920s through at least the late 1940s is an environmental concern.
   - The historical presence of two (2) battery and ignition service stations in the north-central portion of the Subject Site from the 1920s through at least the late 1940s is an environmental concern
   - Vulcanizing activities, reported to historically have been present on the Subject Site, are an environmental concern
   - The presence of a trench drain and suspected oil/water separator (or grease trap) observed on the northwest portion of the Subject Site is an environmental concern.

2. Former Central Indiana Lighting & Gas Works, 302 W. 3rd Street (aka Indiana Gas Company, Inc., 205 S. Madison Street)
   The presence of this former manufactured gas plant site, adjoining the Subject Site to the west across the B-Line Trail, is an environmental concern, especially since it is directly upgradient from the Subject Site with respect to measured groundwater flow direction.

2.0 INTRODUCTION

2.1 Location and Legal Description

The Subject Site is comprised of three (3) parcels of land identified by two (2) parcel numbers (# 53-05-33-310-240.000-005 and # 53-05-33-310-243.000-005) totaling approximately 1.7 acres of land, and is situated in the SW ¼ of the SW ¼ of the SW 1/4 of Section 33, Township 9N, Range 1W in Bloomington, Monroe County, Indiana. The Subject Site has a legal address of 216 South College Avenue, Bloomington, Indiana, 47404 (Figure 1 and Figure 2).

2.1.1 Site and Vicinity General Characteristics

The Subject Site is located on the northwest corner of S. College Avenue and W. 3rd Streets in downtown Bloomington, IN. The area is predominantly commercial and municipal in nature.

2.1.2 Current Uses of the Property

The Subject Site is zoned CD (Commercial Downtown). The on-site buildings are currently used as commercial office space and a retail shop.

2.1.3 Descriptions of Structures, Roads, Other Improvements

The Subject Site consists of two adjoining parcels (# 53-05-33-310-240.000-005 and # 53-05-33-310-243.000-005) with surface dimensions of approximately 280 feet x 289 feet, totaling 1.7 acres of land. The parcel (# 53-05-33-310-243.000-005) is divided into two equal lots, each having surface dimensions of 135 feet x 60 feet, on which are paved parking lots. An approximately 29,000 square feet (ft^2), brick and block building on concrete slab occupies the western portion of the Subject Site. The remainder of the property is covered by an asphalt paved parking lot with access points on 4th Street to the north and S. College Avenue to the east. The B-Line recreational trail adjoins the Subject Site to the west, and W. 3rd Street adjoins to the south. The Subject Site has electricity, natural gas, and city water and sewer services available to it.

2.1.4 Current Uses of the Adjoining Properties

A museum and retail shops adjoin the Subject Site to the north and northwest across 4th Street. The Indiana Limestone Co. office adjoins the Subject Site to the northeast. Commercial services and an entertainment center adjoin the Site to the east across College Ave. The Monroe County Convention Center adjoins the Subject Site to the south across 3rd Street. Vectren Gas Co. adjoins the Site to the west across the B-Line Trail.

2.2 Purpose

BCA was requested and authorized by Mr. Brian Payne, Assistant Director, Office of Economic and Sustainable Development, City of Bloomington, Indiana to perform a Phase I Environmental Site Assessment (ESA) of the Commercial Building site located at 216 S. College Avenue in Bloomington, Indiana. This report presents the

information obtained during the investigation and provides findings, opinions, and conclusions based on the information.

2.3 Detailed Scope-Of-Services

BCA performed this Phase I Environmental Site Assessment pursuant to the scope of work requested by the client. This work was performed in accordance with the "Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process," ASTM E1527-13 (the Standard) with the exceptions noted in Section 2.5 below and the All Appropriate Inquiry (AAI) standard codified at 40 CFR 312 as updated December 31, 2013. To accomplish the goals set forth in the Standard and AAI, BCA personnel conducted historical research, a review of public records, interviews and a site visit.

The scope of historical research conducted by BCA in the preparation of this Phase I site assessment included a search of Sanborn Fire Insurance Map coverage for the area of and around the Subject Site, a review of available city directory listings for addresses near the subject property, a review of historical aerial photographs of the subject property and surrounding land, a review of available Property Tax Records, and a review of available building permits.

The public records search included, but is not limited to, an examination of US EPA and Indiana Department of Environmental Management (IDEM) computer databases for sites that fall within the search radii that are published in the Standard. An effort was made to find specific information about the Subject Site and adjoining sites identified in this database search that could have an impact on the Subject Site. This effort included a review of files that are available online on the IDEM Virtual File Cabinet (VFC).

The site visit portion of the assessment included an inspection of the Subject Site and those parts of neighboring properties that could be seen from public rights-of-way around and near the Subject Site. Appropriate notes and photographs were obtained pursuant to the Standard.

2.4 Significant Assumptions

Assumptions made in the preparation of this report include the assumption that the environmental records obtained from the IDEM and US EPA internet sites are complete and up-to-date. It also has been assumed that information on groundwater flow and vapor migration in an area can *in general* be extrapolated from the local topography, surface drainage, investigations from local LUST, State Clean-up, and VRP sites, and published reports. BCA has assumed that all persons that were interviewed for this report have been truthful in their answers.

2.5 Limitations and Exceptions

BCA based the conclusions of this Phase I report upon the information described herein subject to the limitations attached to or described in the report. Because of the limited nature of the inquiry, BCA makes no warranties; either expressed or implied,

that the site is free of contamination. BCA does warrant, however, that it performed this assessment in accordance with the level of care and skill ordinarily exercised by other persons or entities currently performing similar work and practicing under similar conditions.

2.6 Special Terms and Conditions

No Special terms or conditions apply to this Phase I report.

2.7 User Reliance

BCA makes this report for the benefit of the City of Bloomington (the User) who may rely upon it. A copy of the report may be given to a lender, investor or purchaser of the property covered by the report. The reliance on this report by any person or party (other than the User) is limited by the ASTM standard since a third party is not the User and has not fulfilled User Obligations. ASTM E1527-13 specifies that a report completed less than 180 days previously is presumed to be valid.

3.0 USER PROVIDED INFORMATION

3.1 Chain of Ownership

No title search or related information was provided by the User. However, a Property Report Card (PRC) with partial ownership history was obtained from the Monroe County GIS Department – GIS Web site. According the PRC, the current owners of the property are:

- Rbowa, LLC (parcel # 53-05-33-310-240.000-005)
- Thomas Sicks & Nancy Held (parcel # 53-05-33-310-243.000-005)

The immediate past owners of the property are:

- Indiana University Foundation (parcel # 53-05-33-310-240.000-005)
- Marilyn A. Sicks (parcel # 53-05-33-310-243.000-005)

No other information on past ownership of the Subject Site was found.

Refer to Section 4.4.4 for further information regarding property ownership history.

3.2 Environmental Liens

The User is not aware of any environmental liens or activity and use limitations (AULs) associated with the Subject Site. A search provided by *GeoSearch* reported no environmental liens or AULs associated with the Subject Site. In addition, a search of the IDEM Institutional Controls (IC) Registry was conducted by BCA on May 1, 2019. No AULs were found for the Subject Site or immediately adjoining sites in the IDEM IC Registry (Appendix B).

3.3 Specialized Knowledge

No specialized knowledge was provided by the User for the preparation of this report.

3.4 Commonly Known or Reasonably Ascertainable Information

No commonly known or reasonably ascertainable information was used in preparation of this report.

3.5 Valuation Reduction for Environmental Issues

There is no known valuation reduction associated with the Subject Site and the User is not aware of any valuation reduction for environmental issues.

3.6 Owner, Property Manager, and Occupant Information

The Subject Site is currently owned by Rbowa, LLC, and Thomas Sicks & Nancy Held, and is currently occupied with commercial offices and a retail store.

3.7 Reason for Performing Phase I

The User requested this Phase I ESA to satisfy one of the requirements for limited liability protection under CERCLA and AAI (“All Appropriate Inquiry”) and the need to

understand potential environmental conditions that could materially impact future use of the subject and adjoining properties.

The User completed and signed the AAI User Questionnaire provided in Appendix C.

4.0 RECORDS REVIEW

4.1 Standard Environmental Record Sources

Agency public records maintained by the Indiana Department of Environmental Management (IDEM) and made available on the internet through the Virtual File Cabinet (VFC) and those of the U.S. EPA available from electronic databases were searched on April 26, 2019 by BCA and *GeoSearch* to determine if there had been any environmental reports, permits, incidents, or similar events specified in the ASTM 1527-13 Standard at or near the Subject Site. Pertinent records and search results are provided in Appendix D.

Based on our review of the records, it appears that:

a) No Federal NPL sites are currently located within one mile of the Subject Site.

b) No Federal Delisted NPL sites are currently located within one-half mile of the Subject Site.

c) No Federal CERCLIS (SEMS) sites are currently located within one-half mile of the Subject Site.

d) Eight (8) Federal CERCLIS NFRAP (SEMS – Archive) sites are currently located within one-half mile of the Subject Site. *Note: six of these sites could not be mapped by GeoSearch due to limited or incomplete address information.* See *GeoSearch* Report pages 106 and 146 in Appendix D.

e) Two (2) Federal RCRA Corrective Action sites are currently located within one mile of the Subject Site. See *GeoSearch* Report pages 96 and 130 in Appendix D and Section 4.2 below for additional information.

f) Two (2) RCRA TSD facilities are located within one-half mile of the Subject Site. See GeoSearch Report pages 102 and 136 in Appendix D and Section 4.2 below for additional information.

g) One (1) RCRA hazardous waste generator site is reported on the Subject Site or adjoining properties. See *GeoSearch* Report pages 39 in Appendix D and Section 4.2 below for additional information.

h) Four (4) RCRA Non-Generator hazardous waste generator sites are reported on the Subject Site or adjoining properties. See GeoSearch Report pages 26, 32, 34, and 37 in Appendix D and Section 4.2 below for additional information.

i) No Federal IC / EC registries are reported on the Subject Site or

adjoining properties.

j) No Federal ERNS registries are reported for the Subject Site.

k) Seventeen (17) state-listed cleanup sites are located within one mile of the Subject Site. See *GeoSearch* Report pages 24, 57, 59, 62, 64, 78, 82, 83, 85, 105, 108, 114, 116, 117, 121, 124, and 144 in Appendix D and Section 4.2 below for additional information.

l) No State records of reported spills were found for the Subject Site or adjoining properties.

m) No operating Solid Waste Landfill or solid waste disposal facility is located within one-half mile of the Subject Site.

n) Three (3) registered Underground Storage Tank (UST) sites are located on the Subject Site or on sites adjoining the Subject Site. See *GeoSearch* Report pages 30, 38, and 41 in Appendix D and Section 4.2 below for additional information.

o) Twenty-one (21) Leaking Underground Storage Tank (LUST) sites are located within one-half mile of the Subject Site. See *GeoSearch* Report pages 25, 45, 47, 58, 66, 71, 74, 84, 86, 88, 91, 92, 93, 95, 109, 112, 125, 126, 142, 145, and 149 in Appendix D and Section 4.2 below for additional information.

p) No State IC / EC registries are reported for the Subject Site or adjoining properties.

q) Two (2) State Voluntary Remediation sites are situated within one-half mile of the Subject Site. See *GeoSearch* Report pages 42 and 63 in Appendix D for additional information.

r) Sixteen (16) State and U.S. Brownfield Program Site listings are situated within one-half mile of the Subject Site. See *GeoSearch* Report pages 23, 31, 36, 43, 52, 65, 70, 80, 90, 107, 111, 115, 118, 122, 129, and 147 in Appendix D and Section 4.2 below for additional information.

s) No registered or Historic Drycleaner Site listings are situated within one-quarter mile of the Subject Site.

4.2 Additional Environmental Records

BCA searched IDEM's VFC on April 30, 2019 for any environmentally significant reports associated with the Subject Site or adjoining sites:

Former Central Indiana Lighting & Gas Works, 302 W. 3rd Street (aka Indiana Gas Company, Inc., 205 S. Madison Street)

This site, located adjoining the Subject Site to the west across the B-Line Trail, was a former manufactured gas plant site from approximately 1900 through 1930. Both coal gas and carbureted water gas processes were utilized on the site, and numerous above and below ground structures were historically present on the site including: a coke house, purifier room, meter room, generator room retorts, iron oil storage tanks, coal and coke piles, a tar well, and three (3) gas holders. None of the above ground portions of these structures remain; however, portions of the below ground structures are believed to still be present beneath the current occupant of the site, a Vectren Energy Operations Center. Several areas of concern were noted in the site Remediation Work Plan (RWP) prepared by Earth Tech in 2002: the northeast portion of the site near the tar well and small gas holder; the southwestern portion of the site near the 100,000 cubic feet gasholder; and the southeastern portion of the site in the area of the former relief gas holder. Other reports reviewed included a Multi-Site Voluntary Remediation Agreement approved by IDEM in March 2004 (site VRA ID # 6000410); a Preliminary Risk Evaluation Report prepared by Earth Tech in 2005; and several Reports of Findings – Groundwater Sampling by Earth Tech from 2006 and 2007. Based on the reports reviewed, contaminants of concern in groundwater remaining on the site at concentrations exceeding IDEMs guidelines include: the VOCs benzene and naphthalene and various PAHs. However, no closure documents, certificates of completion, or covenants-not-to-sue were found in the VFC, and the current investigation and/or remediation status of the site is unknown. VFC Documents # 56202998, 31169620, 30378450, and 47437557.

Former Bloomington Tire, 301 S. College Avenue

This former automotive repair facility located adjoining southeast of the Subject Site across S. College Avenue and 3rd Street, was the location of a lust incident related to a waste oil tank and several hydraulic lifts. The site was issued a Comfort Letter in May 2006 which indicated that soil contamination (including metals, PAHs, PCBs, and petroleum constituents), and groundwater contamination (including tetrachloroethylene (PCE), vinyl chloride (VC) and various PAHs) were present at levels exceeding residential and industrial closure levels. The letter further indicated that the groundwater contamination was likely from an offsite source(s), most likely to the northeast or east across S. Walnut Street. The Comfort Letter stipulated that an ERC prohibiting groundwater use, limiting soil excavation, and maintaining an impervious cap over the site be put in place. VFC Document # 20573576.

Former Bloomington Ford, 302 S. College Avenue

According to documentation, one (1) 300-gallon used oil UST was removed from the site and closed in March of 1991. Also, one (1) 1,000-gallon gasoline UST was filled with inert material and closed in place during March of 1991. The soil from the tank

cavity was tested for non-halogenated VOCs, the results came back as non-detect. It appears one (1) UST of unknown size and contents was also removed from the site in 1986. An NFA approval letter was granted to the site on July 19th, 2016. VFC Documents # 23384162 & 80342003.

Josephine Brown Trust Property, 211 & 213 S. College Avenue

According to documentation, the property at 211 & 213 S. College Ave. has operated as an automotive dealership, auto repair shop, gasoline service station, and automotive rental facility. A total of seven (7) underground storage tanks were removed from the site in 1995. A total of 1,600 tons of contaminated soil were removed from the site for proper disposal. Eight (8) monitoring wells were installed on-site and screened near the soil/bedrock interface at approximately 15 feet below ground surface. All monitoring wells produced water with acceptable concentration levels except for one. MW-7 appears to produce water with elevated levels of PCE and TCE. These findings are reported in a site remediation report prepared by Bynum Fanyo Environmental, Inc. dated July 16th, 1997. A brownfields Site Status Letter was granted to the site in October 1998, indicating that "there is no risk of exposure to any chemical of potential concern at the property, and the reuse of the property is not expected to pose any additional risk to human health or result in any additional harm to the environment". VFC Documents # 14582194 & 15433359.

Wonderlab Museum, 308 W. 4th Street

According to documentation, five (5) USTs were discovered on-site in April of 1997 and removed in 1998. In April of 2002, a 1,000-gallon waste oil and 1,000-gallon heating oil UST were removed from the property. An NFA letter was awarded to the site on July 16th, 2002 after results of groundwater sampling came back below action levels. TPH levels remained above action limits in the soil from the UST excavation area but do not pose a hazard to human health and the environment. VFC Documents #'s 48620741 & 48533986

4.3 Physical Setting

As estimated from the U.S. Geologic Survey 7.5 Minute Series Topographic Quadrangle Map for Bloomington, Indiana (2013; C.I. = 10 feet), the elevation of the site is approximately 750 feet above mean sea level, relative to the North American Vertical Datum of 1988. The site is situated on relatively level terrain. Surface drainage in the overall area of the Subject Site is generally to the south-southeast toward Clear Creek located 0.4 miles south southeast of the Subject Site. However, surface drainage at the Subject Site flows to the adjacent streets and municipal storm water system.

4.3.1 Soils

As described in the *Web Soil Survey, Soil Resource Report for Monroe County, Indiana 216 South College Avenue, Bloomington, IN 47404,* and accessed on April 26, 2019, there is one soil map unit within the Subject Site parcel:

Ua Udorthents, loamy 100%

Udorthents are human-altered and human-transported (HAHT) soils and materials. HAHT soils include those intentionally and substantially modified by humans for specific purposes (e.g., terraced agriculture, building support, mining, transportation, etc.). They do not include soils modified through standard agricultural practices (such as shallow plowing, liming, and fertilization) or farmed soils with unintended wind and water erosion (Appendix E).

4.3.2 Surficial Geology

The area of the Subject Site is underlain by approximately 5 to 15 feet of unconsolidated deposits that lie on Mississippian age bedrock (Fenelon, et al, 1994). Total thickness of unconsolidated deposits overlying bedrock in Monroe County is commonly reported as 6 to 25 feet. The unconsolidated sediments consist of Terra Rossa – red, clayey regolith, 5 to 50 feet thick, over limestone of Middle Mississippian age.

4.3.3 Bedrock Geology

The Subject Site and surrounding area lie within the Mitchell Plateau physiographic unit within the Southern Hills and Lowlands regional physiographic province (Gray, 2000). The Mitchell Plateau is bounded by the older rocks of Norman Upland on the east and the younger rocks of the Crawford Upland to the west. The Mitchell Plateau (also referred to as the Mitchell Plain) is a karst area in Indiana of relatively low relief. An extensive underlying cave system developed in Mississippian age limestone bedrock. Surface drainage is rare due to most streams in the area disappearing into caves or joints within the rock.

Bedrock at the site is reported to be the Mississippian-aged Sanders Group (that includes the Harrodsburg and Salem Limestones). The Sanders Group consists of a variety of carbonate rocks in complex facies relationships. The Ramp Creek and Muldraugh Formations at the base of the group are dominantly a mixture of fine-grained dolomite and limestone. Cherty and siliceous intervals are common, and minor amounts of siltstone and shale are present. Above that interval in the Harrodsburg Limestone, well-cemented bioclastic calcarenites and calcirudites are dominant over argillaceous limestone, dolosiltites, and shale. The abundance of geodes and chert decreases upward in the group. The Salem Limestone except for the Somerset Shale Member at its base is dominated by porous calcarenite, although it contains a wide variety of other kinds of limestone.

4.3.4 Hydrology

Surface Water

The Subject Site lies within the East Fork White River basin, which has a total drainage area of 5,746 square miles in south-central Indiana. In general, drainage of the Mitchell Plain (including the Subject Site) in Monroe County is considerably different from the rest of the basin; most runoff quickly leaves the surface by entering sinkholes and becoming part of the ground-water system. In the streams that do flow across the Mitchell Plain, some surface water is intercepted by swallow holes and diverted underground into either the groundwater system or

subterranean channels. Surface water drainage from the Subject Site flows south into Clear Creek, located 0.4 mile to the south-southeast.

Unconsolidated Aquifer System
The Subject Site lies in the Dissected Till and Residuum / Unglaciated Southern Hills and Lowlands Aquifer System. Total thickness of unconsolidated deposits overlying bedrock is commonly 6 to 25 feet. Clay material dominates this unconsolidated aquifer system; however, discontinuous sand or gravel deposits are reported. These deposits are commonly 1 to 3 feet thick. Because of low permeability of surface materials, this system is not considered very susceptible to contamination from surface sources.

Bedrock Aquifer System
The Blue River and Sanders Groups occur as the uppermost bedrock aquifer system over most of the west-central portion of Monroe County. Depth to bedrock is generally between 5 and 30 feet. The Blue River and Sanders Groups Aquifer System is not regarded as a major ground-water resource in the county. Static water levels range from 0 feet to 197 feet below land surface but generally between 15 and 75 feet below surface. Areas of shallow bedrock, especially where joints, fractures, and solution features are present, may allow contamination. These conditions warrant considering the aquifer system as a whole to be susceptible to contaminants introduced at and near land surface.

The City of Bloomington is served by a public water supply. Based on environmental reports for other nearby sites, local groundwater flow in and around the Subject Site is to the south-southeast.

Regional groundwater flow of the area is predominately to the south-southwest in general conformance with surface topography/drainage and the regional attitude of underlying bedrock.

4.4 Historical Use Information on the Property

4.4.1 Sanborn Fire Insurance Maps

Sanborn Fire Insurance Maps were searched by *GeoSearch* on April 30, 2019 and reviewed by BCA. Maps covering the Subject Site for the years 1883, 1887, 1892, 1898, 1907, 1913, 1927, 1947, and 1963 were reviewed. Copies of the Sanborn Maps are included in Appendix F. The descriptions for each map reviewed are provided below:

Sanborn Map - 1883
The Subject Site is split into two parcels, an eastern and a western parcel. On the western parcel, a rail line runs alongside the northwest edge. Directly to the east of the rail line is a coal house and a lime house. An office sits on the northern edge of parcel next to Fourth Street. There is a livery (65'x130') on the eastern half of the Site. Lumber was stored on the western edge of the livery. On the eastern

parcel a smaller stable was present on the south western edge. A small wooden structure is built on to the eastern edge of this stable. A brick residential dwelling is present on the north eastern edge of the Site. Three wooden structures are built on to the edges of this dwelling.

Sanborn Map - 1887

Within the western parcel, a sand bin and a coal house appear on the western edge. Two new open structures are shown on the south western and south-central portions of the parcel. A lumber shed appears in the north central portion of the parcel. The western parcel is now labelled as "W.B. Hugh's, Coal, Lime, and Lumber Yard." No changes are made to the eastern parcel between 1883 and 1887.

Sanborn Maps - 1892

On the western parcel a coal house appears on the south western edge. Two lumber sheds are labelled in the central portion of the parcel. The livery remains in its original position. An additional dwelling is built on the southern edge of the eastern parcel. A structure appears on the central eastern side of the eastern parcel. A previous structure is now labelled as a doctor's office.

Sanborn Maps - 1898

The 1898 map shows the Subject Site to be essentially the same as the 1892 map with the exception of a new stable shown along the western central boundary of the eastern parcel and an add-on to the livery labeled "Carriage Warehouse."

Sanborn Maps - 1907

The western parcel is now labelled "Hughes Bro's Lumber & Coal Yard." There is now a structure designated to lime storage and a structure designated as a "cement warehouse" both on the western edge of the western parcel. The carriage warehouse is now an official part of the livery. The lumber shed to the north has changed shape and is now labelled "office". The eastern parcel has remained essentially the same other than the removal of the stable that appeared in the 1898 map and the removal of a portion of the stable on the southern edge.

Sanborn Maps - 1913

This map shows the Subject Site to be essentially the same as the 1907 map with the exception of the appearance of a new building in the northern portion of the eastern parcel labelled "lunch" and an addition to the office on the northside of the western parcel.

Sanborn Maps - 1927

This map shows a new structure is labeled "Filling Station" in the northeastern block. Two gas tanks are labeled in the northeast corner of the Site. Coal is still being stored on the west side of the Site. A dust house is shown in the middle of the Site. An open elevator is shown in the central eastern area of the Site. A battery shop appears near the southeast corner of the Site.

Sanborn Maps – 1947
This map shows the filling station moved to the northeast corner of the Site. Three new gas tanks appear in the eastern central area. A battery & ignition service station can be seen in the central area of the Site. Also, an auto repair shop appears in the south-central area.

Sanborn Maps – 1963
In this map the Subject Site is shown in its current configuration. There is a concrete block enclosed elevator shown in the northwestern corner of the Site. The building is labeled as "Noncomb, 1957."

4.4.2 Aerial Photos

Several aerial photos showing the Subject Site were available through *GeoSearch* (searched April 28, 2019) and Google Earth™, and were reviewed by BCA. Aerial photographs for the following years were reviewed: 1939, 1952, 1962, 1967, 1977, 1984, 1986, 1992, 1998, 2003, 2005, 2006, 2007, 2008, 2010, 2012, 2014, and 2016. Copies of the aerial photos are included in Appendix G. The descriptions for each photo reviewed are written below.

1939 - 1952 Aerial Photographs
These photos indicate that there appear to be four structures on the Subject Site, but the photo resolution is insufficient to discern much detail.

1962 – 2016 Aerial Photographs
These photos indicate that the presence and arrangement of structures at the Subject Site appear consistent with current conditions on the property, with the commercial building visible on the western portion of the site and the parking lot visible on the eastern portion of the site.

4.4.3 City and County Directories

A search of city and county directories was performed by *GeoSearch* on April 30, 2019 and reviewed by BCA. Directories were searched from 1913 (the earliest reviewed) through 2016 for the Subject Site. Results of the search are included in Appendix H. The table below summarizes the former occupants of the Subject Site:

Address	Occupant	Years Listed
200 S. College	Hesler Bros. (Vulcanizing)	1922-1923
200 S. College	Hesler Bros. Battery & Tire Service	1927-1928
200 S. College	Abram Bros (Service Station)	1927 - 1955
202 S. College	Brown Ercell (Filling Station)	1950
204 S. College	King Noble Service Station & Garage	1955
204 S. College	King's Service Station & Garage	1945-1946
210 S. College	Phillips Petroleum Co. (Service Station)	1934-1935

Address	Occupant	Years Listed
210 S. College	Hesler Bros. (Vulcanizing)	1931-1932
210 S. College	Hughes Bros. Planing Mill	1927-1928
216 S. College	Harlos C E Inc.	1950 and 1955
220 S. College	Full-O-Pep Battery Station	1931-32 & 34-35 & 38-39
220 S. College	Full-O-Pen Battery Station	1927-28
220 S. College	Standard Oil Company (Service Station)	1934-35
220 S. College	Philadelphia Battery Service Co.	1922-23

4.4.4 Ownership History

Chain of Title for the Subject Site was not provided to BCA by the User. Based on the information obtained from the Monroe County Tax Assessor GIS property report card, the Subject Site is currently owned by Rbowa LLC, Thomas Sicks, and Nancy Held. Information on former owners is listed below:

Parcel	Current Owner	Dates	Immediate Past Owner	Dates
53-05-33-310-240.000-005	Rbowa, LLC	03/01/1995 to present	Indiana University Foundation	Unknown to 03/01/1995
53-05-33-310-243.000-005	Thomas Sicks & Nancy Held	03/02/2009 to present	Marilyn A. Sicks	09/27/1977 to 3/02/2009

No other information regarding previous ownership was found.

4.4.5 Other Records of Historical Use

No other records of historical use were found.

4.5 Historical Use Information on Adjoining Properties

4.5.1 Sanborn Fire Insurance Maps

Sanborn Fire Insurance Maps were searched by *GeoSearch* on April 30, 2019 and reviewed by BCA. Maps covering the Subject Site and adjoining properties for the years 1883, 1887, 1892, 1898, 1907, 1913, 1927, 1947, and 1963 were reviewed. Copies of the Sanborn Maps are included in Appendix F. The descriptions for each map reviewed are provided below:

Sanborn Map - 1883

This map shows the passenger and freight depot connecting to the rail line north of the Site. This map doesn't include any western or southern properties.

Sanborn Map - 1887

This map is essentially the same as the map from 1883 with the exception that it shows Bloomington Electric Light and Power Co. to the west of the Site.

Sanborn Maps - 1892

This map is essentially the same as the 1887 map.

Sanborn Maps - 1898
This map shows the addition of Bloomington Gas Work to the west of the Site. A 20,000 cu ft. gasholder for storing natural gas is shown on the gas companies' property.

Sanborn Maps - 1907
This map shows a new 100,000 cu ft. natural gas AST to the west of the site. Also, to the west is a coal processing plant with a coking house. To the southwest is a small repair shop adjacent to the Site.

Sanborn Maps - 1913
This map is essentially the same as the map from 1907 with the exception of three oil tanks in the south-central area of the Central Indiana Lighting Co. and Gas Works to the west of the Site.

Sanborn Maps - 1927
There are six new tanks shown on the site to the west. The six new tanks are on the southeast side of the Central Indiana Lighting Co. and Gas Works site. To the east of the Subject Site is a new filling station where four gas tanks are shown around 120 W 3rd Street. To the south of the Subject Site is an auto sales building.

Sanborn Maps – 1947
This map shows a new filling station to the northwest catty-corner to the Subject Site. To the west is a new 160,000 cu ft. iron gasometer. Across College Ave. to the east of the Site is an auto sales and service business.

Sanborn Maps – 1963
This map shows two new auto shops adjacent to the site. One is to the southeast and the other is directly east of the Site. The filling station to the northwest is still in operation.

4.5.2 Aerial Photos

Several aerial photos for the area surrounding the Subject Site were available through *GeoSearch* (searched April 28, 2019) and Google Earth™, and were reviewed by BCA. Aerial photographs for the following years were reviewed: 1939, 1952, 1962, 1967, 1977,1984, 1986, 1992, 1998, 2003, 2005, 2006, 2007, 2008, 2010, 2012, 2014, and 2016. Copies of the aerial photos are included in Appendix G. The descriptions for each photo are written below:

1939 – 1962 Aerial Photographs
In these photographs, the structures visible on properties surrounding the Subject Site appear consistent with other images/maps seen. Two large gasometers can be seen clearly to the west of the Site. Contrast and resolution are insufficient to yield significant observations.

1967 Aerial Photograph
In this photograph, only the larger of the two gasometers remain to the west of the Site. The filling station to the northwest has been replace with a parking lot. The filling station to the east remains.

1977 – 1986 Aerial Photographs
In these photographs, no gasometers remain to the west of the site. The filling station to the east remains.

1992 Aerial Photograph
In this photograph, the area surrounding the Subject Site appears essentially the same as in the 1986 photograph with the exception of the removal of the filling station across the College Avenue to the east.

1998 Aerial Photograph
In this photograph, the area surrounding the Subject Site appears essentially the same as in the 1992 photograph with the exception of construction at the site of the former filling station to the northwest. There is what looks to be a large hole in the ground, possibly tank removal.

2003 Aerial Photograph
The area surrounding the Subject Site appears essentially the same as in the 1998 photograph; however, construction to the northwest has been completed.

2005 – 2007 Aerial Photographs
In these photographs, the area surrounding the Subject Site appears essentially the same as in the 2003 image.

2008 Aerial Photograph
The area surrounding the Subject Site appears essentially the same as in the 2007 photograph with the exception of the removal of the former auto shop to the southeast of the Subject Site.

2010 – 2016 Aerial Photographs
The area surrounding the Subject Site appears essentially the same as in the 2008 photograph and is in its current configuration.

Aerial Photographs – Additional General Comments/Observations
Several aerial photographs show a railroad spur just west of the Subject Site although scale, resolution, and/or contrast make it difficult to discern when this structure was present. BCA reviewed corresponding Sanborn Maps (see section 4.4.1) and historical Topographic Maps to better verify the presence of this structure. The rail spur is not observable in aerial photographs or topographic maps dated on or after 2005.

4.5.3 City and County Directories

A search of city and county directories was performed by *GeoSearch* on April 30, 2019 and reviewed by BCA. Directories were searched from 1913 (the earliest reviewed) through 2016 for the area surrounding the Subject Site. Results of the search are included in Appendix H. The table below summarizes the occupants of the adjoining and nearby properties which are relevant to this investigation.

Address	Occupant	Years Listed
211 S College Ave.	Jerry's Diagnostic Center (Auto Repair)	1986-1996
211 S College Ave.	Frosty's Dodge Inc. (Auto Dealer)	1981
211 S College Ave.	Sciscoe Dodge Inc. (Auto Dealer)	1971-1976
211 S College Ave.	Brown Paul Motor Sales	1966
213 S College Ave.	Sciscoe Sales and Service (Used Cars)	1986
217 S College Ave.	Standard Oil Station	1927-1928
221 S College Ave.	Carl J. Litten (Filling Station)	1945-1946
223 S College Ave.	Brown's Standard Service Gas Station	1966
223 S College Ave.	Walker Standard Service Station (Gas Station)	1950-1960
223 S College Ave.	College Ave. Garage / Motor & Sales Co.	1913-1917
300 S College Ave.	Graham Motor Sales Co	1927-1928
301 S College Ave.	Bloomington Tire Co.	1966-2006
301 S College Ave.	Graham Motor and Tractor	1927-1955
302 S College Ave.	Tom O'Daniel Motor Sales	1966-1986
302 S College Ave.	Graham Motor Sales Co.	1945-1955
118 W 3rd St.	Standard Oil Filling Station	1927-1928
302 W. 3rd St.	Indiana Gas Co.	1950-1971
308 W 3rd St.	Public Service Co. (Plant)	1931-1939

5.0 SITE RECONNAISSANCE

5.1 Methodology and Limiting Conditions

The main site reconnaissance was conducted on April 18, 2019 by Mr. Rodney A. Manny, Field Geologist, and Leonard D. Hinrichs II, LPG of BCA, and accompanied by Kimberly Key, Vice President of Grant Properties (property manager). The site visit included observation of the Subject Site and adjoining sites for environmentally significant items, such as transformers, storage tanks, unusual cracks or ground discoloration, as well as significant commercial or industrial activity. Photographs were taken of conditions at the time of the site visit. During the site visit evaluation of adjoining properties were limited to observations from public rights-of-way or other public areas.

Notes of observations made during the site visit were made in a notebook and/or marked on a site map. Photographs were taken of items of interest.

5.2 General Site Setting

The Subject Site is situated in the City of Bloomington in a mixed residential/commercial area. One building is present on the Subject Site which is currently occupied by four commercial businesses. The remainder of the property is covered with paved parking (east and south sides of the building).

5.3 Exterior Observations

The Subject Site consists of two (2) parcels, divided into three (3) lots totaling approximately 1.7 acres of gently sloping land, with the street address of 216 South College Avenue, Bloomington, IN. The Site is currently an occupied commercial building with a concrete parking area. The commercial building is two stories high and consists of brick and steel on concrete slab construction (photos 1-4). City water, electricity, gas, and sewer services are currently available to the Subject Site.

The following were observed during the reconnaissance of the exterior of the Subject Site:

- A trench drain with what appeared to be an oil/water separator was observed in the concrete-paved parking area near the northwest corner of the onsite building. Two (2) separate concrete vaults with metal covers were observed. One of the vaults was able to be opened. It contained piping consistent with an older style oil/water separator or grease trap (photo 5).

- Two (2) sets of three pole-mounted electrical transformers were observed on the southwestern corner and northern edge of the Subject Site. Both sets of transformers were over paved surfaces. No labeling or other indication of PCB content was visible on the transformers, and all of them appeared to be in good condition, with no staining or other visual evidence of leakage or spillage (photo 2 & 6).

- Numerous storm drains were observed throughout the parking lot areas of the Subject Site. No evidence that any petroleum or hazardous materials have ever been spilled or placed in the storm drains was observed (photo 7).

- Three (3) 55-gallon steel drums labeled “racing gasoline” were observed on the paving outside the southwestern corner of the building (Campus Costume). The owner of the store indicated that he acquired the drums empty and was just storing them on the site temporarily in order to use them at a remote location for another purpose. The drums appeared to be essentially empty with the exception of one drum which appeared to contain < 3 gallons of rainwater, since the drum was open to the elements. No evidence of leakage or spillage from the drums was observed (photo 8).

The following were **not observed** to be present during the exterior reconnaissance of the Subject Site:

- Use or storage of hazardous chemicals
- Petroleum products
- ASTs
- USTs
- Solvents
- Degreasers
- Unidentified containers
- Ground staining
- Corrosion
- Sumps
- Pits
- Ponds or Lagoons
- Stained vegetation
- Wastewater systems
- Air emissions
- Odors
- Pools of liquid
- Wells - potable or monitoring wells
- Septic Systems

5.4 Interior Observations

The Subject Site consists of one (1) commercial building, located on the western half of the property. Access to the building was provided by Ms. Kim Key, Property Manager. The main is split between 4 separate businesses. The interior of the building was generally in good condition.

The following were observed during the reconnaissance of the interior of the Subject Site:

- A hydraulic powered elevator was observed in the northern portion of the

Subject Site building. The hydraulic mechanism was an integrated unit with an approximately 50-gallon reservoir in a small mechanical room next to the elevator. The unit appeared to be in excellent condition with no evidence of any leakage or spillage of hydraulic fluids (photo 9).

- Minor amounts of common household and commercial cleaners, lubricants, paints, and other maintenance chemicals were observed in several of the office spaces in the onsite building. All of the substances observed were typically in retail consumer sized (1-2 gallons or less) containers and no evidence of spillage, leakage, or intentional mishandling of these materials was observed (photo 10).

- Several floor drains were observed in bathrooms and utility rooms throughout the facility. None of the drains showed any signs of significant staining or other evidence that petroleum products or hazardous substances had ever been placed or spilled into them (photo 11).

The following were **not observed** or noted to be present during the interior reconnaissance of the Subject Site:

- ASTs
- USTs
- Solvents
- Degreasers
- Drums
- Unidentified containers
- Ground staining
- Corrosion
- Sumps
- Pits
- Ponds or Lagoons
- Stained vegetation
- Wastewater systems
- Air emissions
- Odors
- Pools of liquid
- Wells - potable or monitoring wells
- Septic Systems
- Electrical transformers

5.5 Observations on Adjacent Properties

Commercial retail outlets and a hotel adjoin the Subject Site across 4th Street to the north, commercial services adjoin to the east across S. College Ave., the Monroe County Convention Center adjoins the Subject Site to the south across 3rd Street, and a commercial service and a retail store are adjacent to the west of the Subject Site across the B-Line trail (photos 12-16) .

The following were **not observed** to be present on adjoining properties during the reconnaissance of the Subject Site:

- Use or storage of hazardous chemicals
- Petroleum products
- ASTs
- USTs
- Solvents
- Degreasers
- Drums
- Unidentified containers
- Ground staining
- Corrosion
- Sumps
- Pits
- Ponds or Lagoons
- Stained vegetation
- Wastewater systems
- Air emissions
- Odors
- Pools of liquid
- Wells - potable or monitoring wells
- Septic Systems
- Electrical transformers

6.0 INTERVIEWS

6.1 Interview with Site Owner

The Subject Site is currently owned by Rbowa LLC, Thomas Sicks, and Nancy Held. Ms. Kim Key, Property Manager, answered questions on behalf of the site owner about her knowledge of the Subject Site on April 18, 2019. Ms. Key stated that her understanding of the past uses of the property were as a restaurant and as a grocery store. Ms. Key indicated that she had no knowledge of any environmental liens or AULs filed or recorded against the property. She also indicated that she was not aware of any spills or chemical releases that have taken place on the site. She was not aware that any environmental assessments or enforcement actions were ever implemented on The Subject Site.

6.2 Interview with Site Manager

See Section 6.1 above.

6.3 Interview with Site Occupant

See Section 6.1 above.

6.4 Interview with Local Government Official

See Section 6.5 below.

6.5 Interview with Others

Mr. Brian Payne, Assistant Director, Office of Economic and Sustainable Development, City of Bloomington, IN was contacted via e-mail on May 9, 2019. Mr. Payne indicated that he was not aware of any environmental cleanup liens or any AULs filed or recorded against the Subject Site. He stated that he was aware of some of the past uses of the property, but he had no knowledge of any specific chemicals present or previously present on the property. He was not aware of any environmental cleanups ever having taken place on the property, and he indicated that he did not know of any obvious indicators of contamination or chemical releases at the facility. He believed that the purchase price being paid for the property is reflective of market value. Mr. Payne completed the AAI User Questionnaire for this report (dated 05/09/2019). A signed copy of the questionnaire is provided in Appendix C.

7.0 EVALUATION

7.1 Findings

Phase I findings identify known or suspected environmental conditions associated with the property, including recognized environmental conditions (REC), controlled recognized environmental conditions (C-REC), historical recognized environmental conditions (H-REC), vapor encroachment conditions (VEC) and *de minimis* conditions, among other environmental conditions. *De minimis* conditions are those that are judged to not to present a material risk of harm to health or the environment. Controlled RECs include past releases that have been addressed to the satisfaction of the applicable regulatory authority, with contaminants allowed to remain in place subject to the implementation of required controls. Historical RECs include records of past releases that have been remediated to the satisfaction of the governing regulatory agency. Vapor Encroachment Conditions (VECs) are potential releases that involve volatile organic compounds that could result in vapor intrusion to structures on the subject site. BCA's opinions regarding each of the findings below are listed in Section 7.2. The following environmental conditions were found during this investigation:

1. Commercial Building (Subject Site), 216 S. College Avenue
   The Subject Site was historically a former livery and lime, coal, and lumber storage facility from as far back as the early 1880s through at least 1913; the location of filling stations and battery & ignition service shops from at least 1927 until sometime after 1947; and a costume shop and financial and law offices since around 1963. The property was located along a main railroad line (adjoining to the west) until it was converted into the B-Line rail trail in the early 2010s.

   - The historical presence of a rail spur on the western portion of the Subject Site along with coal storage piles is a REC.

   - The historical presence of two gasoline filling stations that operated on the north-central and north-eastern portions of the Subject Site from the 1920s through at least the late 1940s with no documentation of proper closure is a REC.

   - The historical presence of two (2) battery and ignition service stations in the north-central portion of the Subject Site from the 1920s through at least the late 1940s, with no information on the operations that took place. Possible chemical releases associated with the historical battery service stations on site are a REC.

   - Vulcanizing activities were reported to historically have been present on the Subject Site. These activities are associated with the use of many different chemicals, including potential VOCs, PAHs, and metals. As such, this is a REC.

- The presence of a trench drain and suspected oil/water separator (or grease trap) observed on the northwest portion of the Subject Site is a REC.

- Two (2) sets of three pole-mounted electrical transformers were observed on the southwestern corner and northern edge of the Subject Site. No labeling or other indication of PCB content was visible on the transformers, and all of them appeared to be in good condition, with no staining or other visual evidence of leakage or spillage. The transformers were situated over paved surfaces and are likely owned by the electrical utility who would be responsible for any spills or leakage. This is a *de minimis* condition.

- Numerous storm drains were observed throughout the parking lot areas of the Subject Site. No evidence that any petroleum or hazardous materials have ever been spilled or placed in the storm drains was observed. This is a *de minimis* condition.

- Three (3) 55-gallon steel drums labeled “racing gasoline” were observed on the paving outside the southwestern corner of the building (Campus Costume). The owner of the store indicated that he acquired the drums empty and was just storing them on the site temporarily in order to use them at a remote location for another purpose. The drums appeared to be essentially empty with the exception of one drum which appeared to contain < 3 gallons of rainwater, since the drum was open to the elements. No evidence of leakage or spillage from the drums was observed. This is a *de minimis* condition.

- A hydraulic powered elevator was observed in the northern portion of the Subject Site building. The hydraulic mechanism was an integrated unit with an approximately 50-gallon reservoir in a small mechanical room next to the elevator. The unit appeared to be in excellent condition with no evidence of any leakage or spillage of hydraulic fluids. This is a *de minimis* condition.

- Minor amounts of common household and commercial cleaners, lubricants, paints, and other maintenance chemicals were observed in several of the office spaces in the onsite building. All of the substances observed were typically in retail consumer sized (1-2 gallons or less) containers and no evidence of spillage, leakage, or intentional mishandling of these materials was observed. This is a *de minimis* condition.

- Several floor drains were observed in bathrooms throughout the offices

in the facility. None of the drains showed any signs of significant staining or other evidence that petroleum products or hazardous substances had ever been placed or spilled into them. This is a *de minimis* condition.

2. Former Central Indiana Lighting & Gas Works, 302 W. 3rd Street (aka Indiana Gas Company, Inc., 205 S. Madison Street)
   This historical use of this property, adjoining the Subject Site to the west across the B-Line Trail, as a manufactured gas plant site, is a REC, especially since it is directly upgradient from the Subject Site with respect to measured groundwater flow direction.

3. Josephine Brown Trust Property, 211 & 213 S. College Avenue
   This site, located adjoining east-southeast of the Subject Site across S. College Avenue, historically operated as an automotive dealership, auto repair shop, gasoline service station, and automotive rental facility. A 1997 site remediation report indicated that seven (7) underground storage tanks were removed from the site in 1995, and a total of 1,600 tons of contaminated soil were removed from the site for disposal. In addition, a groundwater monitoring well on the site indicated elevated levels of PCE and TCE in groundwater. However, the site received a Site Status Letter from IDEM in October 1998 granting site closure with no restrictions for redevelopment. Since this site is downgradient to cross-gradient from the Subject Site, it is unlikely to have materially affected the environmental conditions of the Subject Site. This is a *de minimis* condition.

4. Bloomington Tire Co, 301 S. College Avenue.
   This former automotive repair facility located adjoining southeast of the Subject Site across S. College Avenue and 3rd Street, was the location of a lust incident related to a waste oil tank and several hydraulic lifts. Although the site has been redeveloped as part of the Bloomington Convention Center, some contamination remains including soil (metals, PAHs, PCBs, and petroleum constituents), and groundwater (including PCE, VC, and various PAHs) most likely from and offsite source to the northeast or east across S. Walnut Street. An ERC prohibiting groundwater use, limiting soil excavation, and maintaining an impervious cap over the site is in place. However, since this site is located downgradient from the Subject Site with respect to measured groundwater flow direction, it is unlikely to have materially affected the environmental conditions of the Subject Site. This is a *de minimis* condition.

5. Bloomington Ford, 302 S. College Avenue
   This former auto dealership located adjoining south of the Subject Site across E. 3rd Street had one (1) 300-gallon used oil UST removed, and one (1) 1,000-gallon gasoline UST closed in place in March 1991. In addition, another UST of unknown size and contents was also removed from the site in 1986. An NFA letter was granted to the site in July 2016. Due to the location of this site down-gradient from the Subject Site, this is a *de minimis* condition.

6. Wonderlab Museum, 308 W. 4th Street
   This former gasoline service station is located adjoining northwest of the Subject Site, across W. 4th Street. According to documentation, five (5) USTs were discovered on site in April 1997 and removed in 1998. In April 2002, a 1,000-gallon waste oil and 1,000-gallon heating oil UST were discovered removed from the property. Over-excavation and offsite disposal of 432 tons of petroleum-impacted soil the UST pits was performed. An NFA letter was awarded by IDEM to the site in July 2002 after results of soil and groundwater sampling came back below action levels. This is a *de minimis* condition.

7. Other Sites
   In addition to the sites listed above, two (2) CERCLIS NFRAP sites, two (2) RCRA Corrective Action site, two (2) RCRA TSD sites, 16 State Listed Cleanup sites, 20 LUST sites, one (1) Voluntary Cleanup site, and 13 State and U.S. Brownfield Program sites are located within the respective search radii of the ASTM and AAI Standard. However, these sites are located downgradient from the Subject Site, have received No Further Action status, or are low priority w/ soil contamination only. As such, these sites are considered *de minimus* conditions with respect to the Subject Site.

7.2 Opinion

7.2.1 Contaminant Migration

Releases on and near the Subject Site are likely to migrate vertically until contact with groundwater and then laterally in the down-gradient direction. Based on information found in the previous assessments of the site to the east of the Subject Site, groundwater flow at the Subject Site is likely to be to the south-southeast toward Clear Creek, located approximately 0.4 mile to the southeast of the Subject Site.

Because of the above considerations, releases at properties located to the northwest and north (upgradient) of the Subject Site could potentially have an impact on the site. Releases at properties immediately adjoining to the east and west (cross-gradient) of the Subject Site could impact the Subject Site only if they are very near; however; releases farther away in these directions would not. Because radial spread of contaminants is common at the source, especially in the shallow soil or smear zone at the top of the water table, releases that took place very near the Subject Site may have affected it even if the site is downgradient (south and southeast) of the Subject Site.

Vapors from releases to the groundwater could migrate through the subsurface via loose and unconsolidated soils, utility conduits and trenches, and disturbed or excavated soils. Vapors can accumulate beneath structures, asphalt and concrete pads or parking lots, and in poorly ventilated buildings. Vapors from sources and impacted groundwater near the Subject Site could impact structures around the Subject Site. The current IDEM guidance indicates potential for vapor intrusion

from groundwater impacted above screening levels at a lateral distance of 25 feet for petroleum and 100 feet for chlorinated volatile organic compounds.

7.2.2 Evaluation of Identified Environmental Conditions

This section presents BCA's opinions regarding RECs and VECs identified in Section 7.1.

1. Commercial Building (Subject Site), 216 S. College Avenue
   The Subject Site was historically a former livery and lime, coal, and lumber storage facility from as far back as the early 1880s through at least 1913; the location of filling stations and battery & ignition service shops from at least 1927 until sometime after 1947; and a costume shop and financial and law offices since around 1963 to the present. The property is located along a former main railroad line (adjoining to the west) until it was converted into the B-Line rail trail in the early 2010s.

   - The historical presence of a rail spur on the western portion of the Subject Site along with coal storage piles is an environmental concern. Rail spurs typically contain coal ash & cinders (CAC) along their former railbeds, which can often contain elevated concentrations of PAHs and heavy metals, impacting subsurface soils.

   - The historical presence of two gasoline filling stations that operated on the north-central and north-eastern portions of the Subject Site from the 1920s through at least the late 1940s is an environmental concern. No closure documentation was found for these former facilities. It is unlikely, due to the timeframe that the gas stations operated, that any soil or groundwater sampling was performed.

   - The historical presence of two (2) battery and ignition service stations in the north-central portion of the Subject Site from the 1920s through at least the late 1940s is an environmental concern. No information regarding the operations that took place at these facilities was found. However, possible contaminants associated with battery manufacturing/repair/service include heavy metals like lead, cadmium, and zinc, as well as acids such as sulfuric acid.

   - Vulcanizing activities were reported to historically have been present on the Subject Site. These activities are associated with the use of many different chemicals, including potential VOCs, PAHs, and metals. This is an environmental concern

   - The presence of a trench drain and suspected oil/water separator (or grease trap) observed on the northwest portion of the Subject Site is an environmental concern, especially since no information was found

on what the unit was used for. It is possible that a former restaurant, reported to have operated in the Subject Site building during an unspecified time, could have used the unit as a grease trap. However, the purpose of the associated exterior trench drain is unknown, and no information on what chemicals or petroleum products may have been placed in the unit was found.

2. Former Central Indiana Lighting & Gas Works, 302 W. 3rd Street (aka Indiana Gas Company, Inc., 205 S. Madison Street)
   The presence of this former manufactured gas plant site, adjoining the Subject Site to the west across the B-Line Trail, is an environmental concern, especially since it is directly upgradient from the Subject Site with respect to measured groundwater flow direction. This site has been in the Indiana Voluntary Remediation Program (VRP) since approximately 2004. Available documentation shows investigation of the site through approximately 2007; however, no reports or documentation of completion subsequent to that date were found in the VFC. Based on the reports reviewed, contaminants of concern in groundwater remaining on the site at concentrations exceeding IDEMs guidelines include: the VOCs benzene and naphthalene and various PAHs.

7.3 Conclusions

We have performed a Phase I Environmental Site Assessment of the Subject Site located at 802 Spring Street, Bloomington, Indiana in conformance with the scope and limitations of ASTM Practice E1527-13. Exceptions to, or deletions from this practice are described in Section 2.5 of this report. Detailed findings and opinions regarding the Subject Site and surrounding sites are included in Sections 7.1 and 7.2 above. This assessment has revealed no evidence of Recognized Environmental Conditions currently in connection with the property, except:

3. Commercial Building (Subject Site), 216 S. College Avenue
   The Subject Site was historically a former livery and lime, coal, and lumber storage facility from as far back as the early 1880s through at least 1913; the location of filling stations and battery & ignition service shops from at least 1927 until sometime after 1947; and a costume shop and financial and law offices since around 1963 to the present. The property is located along a former main railroad line (adjoining to the west) until it was converted into the B-Line rail trail in the early 2010s.

   - The historical presence of a rail spur on the western portion of the Subject Site along with coal storage piles is an environmental concern.

   - The historical presence of two gasoline filling stations that operated on the north-central and north-eastern portions of the Subject Site from the 1920s through at least the late 1940s is an environmental concern.

- The historical presence of two (2) battery and ignition service stations in the north-central portion of the Subject Site from the 1920s through at least the late 1940s is an environmental concern

- Vulcanizing activities, reported to historically have been present on the Subject Site, are an environmental concern

- The presence of a trench drain and suspected oil/water separator (or grease trap) observed on the northwest portion of the Subject Site is an environmental concern.

4. Former Central Indiana Lighting & Gas Works, 302 W. 3rd Street (aka Indiana Gas Company, Inc., 205 S. Madison Street)
   The presence of this former manufactured gas plant site, adjoining the Subject Site to the west across the B-Line Trail, is an environmental concern, especially since it is directly upgradient from the Subject Site with respect to measured groundwater flow direction.

7.4 Deviations and Data Gaps

There have been no data gaps or deviations from the scope of work requested by the client during the preparation of this report.

7.5 Additional Services

No additional services beyond the scope of the ASTM Standard were provided in the preparation of this Phase I report. Additional services can include: FEMA flood plains map, wetland inventory maps, and an EPA Radon Map.

7.6 Signatures of Environmental Professionals

I declare that, to the best of my professional knowledge and belief, I meet the definition of Environmental Professional as defined in 312.10 of 40 CFR 312. I have the specific qualifications based on education, training, and experience to assess a property of the nature, history, and setting of the subject property. I have developed and performed the all appropriate inquiries in conformance with the standards and practices set forth in 40 CFR Part 312.

Leonard D. Hinrichs II, LPG
Senior Project Manager
May 29, 2019

8.0 NON-SCOPE SERVICES

8.1 Recommendations

Based on the conclusions of this Phase I ESA, BCA makes the following recommendations:

Conduct a soil and groundwater investigation (Phase II ESA) on the Subject Site to determine what, if any, releases have occurred and whether past activities on the Subject Site and/or other nearby sites have impacted the soil and groundwater beneath the Subject Site.

8.2 Other Non-Scope Considerations

No other non-scope services beyond the recommendations above were provided in the preparation of this Phase I report. Additional services can include: lead based paint and/or asbestos surveys.

Bloomington, IN 47404

QUALIFICATIONS OF ENVIRONMENTAL PROFESSIONALS

LEONARD D. HINRICHS II, LPG, SENIOR PROJECT MANAGER

Leonard D. Hinrichs II, Business Development Manager and Senior Geologist in BCA's Indianapolis office, has a B.S. degree in Geology from Western Illinois University. He has over 23 years of progressive environmental consulting and management experience focused principally on projects for industrial, commercial, and government clients throughout the United States. He has managed numerous due-diligence, site characterization, remediation, and emergency response projects involving petroleum and hazardous substances at sites regulated under CERCLA, RCRA, and analogous state programs. This includes contaminated site investigation (Phase I and Phase II Environmental Site Assessments), soil and groundwater contaminant investigations, site remediation and planning, regulatory compliance, emergency response, brownfields redevelopment, grant administration, and business development. Mr. Hinrichs is a Licensed Professional Geologist and a Licensed Asbestos Building Inspector.

Appendix C

All Appropriate Inquiry User Questionnaire

Commercial Building
216 South College Avenue
Bloomington, Indiana, 47404

ALL APPROPRIATE INQUIRY USER QUESTIONAIRE

PROJECT DESCRIPTION: Commercial Property PROJECT NO: 19-132

SITE ADDRESS: 216 S. College Avenue, Bloomington, Indiana 47404

In order to qualify for one of the *Landowner Liability Protections (LLPs)* offered by the Small Business Liability Relief and Brownfields Revitalization Act of 2001 (the "*Brownfields Amendments*"), the *user* must provide the following information (if available) to the *environmental professional*. Failure to provide this information could result in a determination that "*all appropriate inquiry*" is not complete.

(1.) Environmental cleanup liens that are filed or recorded against the site (40 CFR 312.25).

Did a search of *recorded land title records* (or judicial records where appropriate, see Note 1 below) identify any environmental liens filed or recorded against the *property* under federal, tribal, state or local law?

NOTE 1— In certain jurisdictions, federal, tribal, state, or local statutes, or regulations specify that environmental liens and AULs be filed in judicial records rather than in land title records. In such cases judicial records must be searched for environmental liens and AULs.

Yes (No)

(2.) Activity and land use limitations (AULs) that are in place on the site or that have been filed or recorded in a registry (40 CFR 312.26).

Did a search of *recorded land title records* (or judicial records where appropriate, see Note 1 above) identify any AULs, such as *engineering controls*, land use restrictions or *institutional controls* that are in place at the *property* and/or have been filed or recorded against the *property* under federal, tribal, state or local law?

Yes (No)

(3.) Specialized knowledge or experience of the person seeking to qualify for the LLP (40 CFR 312.28).

As the *user* of this *ESA* do you have any specialized knowledge or experience related to the *property* or nearby properties? For example, are you involved in the same line of business as the current or former *occupants* of the *property* or an adjoining *property* so that you would have specialized knowledge of the chemicals and processes used by this type of business? If yes, please describe as specifically as possible.

Yes (No)

(4.) Relationship of the purchase price to the fair market value of the *property* if it were not contaminated (40 CFR 312.29).

(a.) Does the purchase price being paid for this *property* reasonably reflect the fair market value?

(Yes) No

(b.) If you conclude that there is a difference, have you considered whether the lower purchase price is because contamination is known or believed to be present at the *property*?

Yes (No)
If yes, please explain:

(5.) Commonly known or *reasonably ascertainable* information about the *property* (40 CFR 312.30)

Are you aware of commonly known or *reasonably ascertainable* information about the *property* that would help the *environmental professional* to identify conditions indicative of releases or threatened releases? For example,

(a.) Do you know the past uses of the *property*?

(Yes) No

(b.) Do you know of specific chemicals that are present or once were present at the *property*?

Yes (No)

(c.) Do you know of spills or other chemical releases that have taken place at the *property*?

Yes (No)

(d.) Do you know of any environmental cleanups that have taken place at the *property*?

Yes (No)

(6.) The degree of obviousness of the presence of likely presence of contamination at the *property*, and the ability to detect the contamination by appropriate investigation (40 CFR 312.31).

As the *user* of this *ESA*, based on your knowledge and experience related to the *property* are there any *obvious* indicators that point to the presence or likely presence of releases at the *property*?

(Yes) No

If yes, please describe as specifically as possible. - proximity to railroad

Disclaimer

This report was designed by GeoSearch to meet or exceed the records search requirements of the All Appropriate Inquiries Rule (40 CFR ï¿½312.26) and the current version of the ASTM International E1527, Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process or, if applicable, the custom requirements requested by the entity that ordered this report. The records and databases of records used to compile this report were collected from various federal,state and local governmental entities. It is the goal of GeoSearch to meet or exceed the 40 CFR ï¿½312.26 and E1527 requirements for updating records by using the best available technology. GeoSearch contacts the appropriate governmental entities on a recurring basis. Depending on the frequency with which a record source or database of records is updated by the governmental entity, the data used to prepare this report may be updated monthly, quarterly, semi-annually, or annually.

The information provided in this report was obtained from a variety of public sources. Below information was gathered from the prior NFRAP update completed in 10/2013 update:

ACTION	START DATE	COMPLETION DATE	RESPONSIBILITY
DS - DISCOVERY	**NOT REPORTED**	**10/29/1991**	**STATE (FUND)**
PA - PRELIMINARY ASSESSMENT	**NOT REPORTED**	**9/16/1992**	**STATE (FUND)**
VS - ARCHIVE SITE	**NOT REPORTED**	**9/16/1992**	**EPA IN-HOUSE**

ACTION DESCRIPTIONS

DS - (DISCOVERY) - THE PROCESS BY WHICH A POTENTIAL HAZARDOUS WASTE SITE IS BROUGHT TO THE ATTENTION OF THE EPA. THE PROCESS CAN OCCUR THROUGH THE USE OF SEVERAL MECHANISMS SUCH AS A PHONE CALL OR REFERRAL BY ANOTHER GOVERNMENT AGENCY.

PA - (PRELIMINARY ASSESSMENT) - COLLECTION OF DIVERSE EXISTING INFORMATION ABOUT THE SOURCE AND NATURE OF THE SITE HAZARD. IT IS EPA POLICY TO COMPLETE THE PRELIMINARY ASSESSMENT WITHIN ONE YEAR OF SITE DISCOVERY.

VS - (ARCHIVE SITE) - THE DECISION IS MADE THAT NO FURTHER ACTIVITY IS PLANNED AT THE SITE.

Below information was gathered from the prior NFRAP update completed in 10/2013 update:

ACTION	START DATE	COMPLETION DATE	RESPONSIBILITY
AR - ADMINISTRATIVE RECORDS	**3/26/1991**	**NOT REPORTED**	**FED ENFORCE**
BB - POTENTIALLY RESPONSIBLE PARTY REMOVAL	**7/6/1988**	**1/26/1996**	**PRP RSP FED**
DS - DISCOVERY	**NOT REPORTED**	**3/1/1985**	**EPA FUND**
PA - PRELIMINARY ASSESSMENT	**NOT REPORTED**	**3/29/1985**	**EPA FUND**
SI - SITE INSPECTION	**NOT REPORTED**	**9/8/1986**	**EPA FUND**
VS - ARCHIVE SITE	**NOT REPORTED**	**8/11/1995**	**EPA IN-HOUSE**

ACTION DESCRIPTIONS

AR - (ADMINISTRATIVE RECORDS) - SARA SPECIFIES THAT ADMINISTRATIVE RECORDS BE COMPILED AT SUPERFUND SITES WHERE REMEDIAL OR REMOVAL RESPONSES ARE PLANNED, OR ARE OCCURRING, OR WHERE EPA IS ISSUING A UNILATERAL ORDER OR INITIATING LITIGATION TO TRACK ENFORCEMENT CASE BUDGET FUNDS USED FOR ANY RP LEAD ACTIVITY.

BB - (POTENTIALLY RESPONSIBLE PARTY REMOVAL) - PROVIDES FOR OVERSIGHT OF POTENTIALLY RESPONSIBLE PARTY (PRP) RESPONSE ACTION FOR REMOVALS, INCLUDING ALL ACTIVITIES FOR MONITORING AND SUPERVISING THE PERFORMANCE OF PRPS TO DETERMINE WHETHER SUCH PERFORMANCE IS CONSISTENT WITH THE REQUIREMENTS OF THE ADMINISTRATIVE ORDERS ON CONSENT, UNILATERAL ADMINISTRATIVE ORDERS, CONSENT DECREES, JUDICIAL DECREES, INFORMATION AGREEMENTS, AND COMPLIANCE SCHEDULES.

DS - (DISCOVERY) - THE PROCESS BY WHICH A POTENTIAL HAZARDOUS WASTE SITE IS BROUGHT TO THE ATTENTION OF THE EPA. THE PROCESS CAN OCCUR THROUGH THE USE OF SEVERAL MECHANISMS SUCH AS A PHONE CALL OR REFERRAL BY ANOTHER GOVERNMENT AGENCY.

PA - (PRELIMINARY ASSESSMENT) - COLLECTION OF DIVERSE EXISTING INFORMATION ABOUT THE SOURCE AND NATURE OF THE SITE HAZARD. IT IS EPA POLICY TO COMPLETE THE PRELIMINARY ASSESSMENT WITHIN ONE YEAR OF SITE DISCOVERY.

SI - (SITE INSPECTION) - THE PROCESS OF COLLECTING SITE DATA AND SAMPLES TO CHARACTERIZE THE SEVERITY OF THE HAZARD FOR THE HAZARD RANKING SCORE AND/OR ENFORCEMENT SUPPORT.

VS - (ARCHIVE SITE) - THE DECISION IS MADE THAT NO FURTHER ACTIVITY IS PLANNED AT THE SITE.

AIRSAFS Aerometric Information Retrieval System / Air Facility Subsystem

VERSION DATE: 10/20/14

The United States Environmental Protection Agency (EPA) modified the Aerometric Information Retrieval System (AIRS) to a database that exclusively tracks the compliance of stationary sources of air pollution with EPA regulations: the Air Facility Subsystem (AFS). Since this change in 2001, the management of the AIRS/AFS database was assigned to EPA's Office of Enforcement and Compliance Assurance.

BRS Biennial Reporting System

VERSION DATE: 12/31/15

The United States Environmental Protection Agency (EPA), in cooperation with the States, biennially collects information regarding the generation, management, and final disposition of hazardous wastes regulated under the Resource Conservation and Recovery Act of 1976 (RCRA), as amended. The Biennial Report captures detailed data on the generation of hazardous waste from large quantity generators and data on waste management practices from treatment, storage and disposal facilities. Currently, the EPA states that data collected between 1991 and 1997 was originally a part of the defunct Biennial Reporting System and is now incorporated into the RCRAInfo data system.

CDL Clandestine Drug Laboratory Locations

VERSION DATE: 10/05/17

The U.S. Department of Justice ("the Department") provides this information as a public service. It contains addresses of some locations where law enforcement agencies reported they found chemicals or other items that indicated the presence of either clandestine drug laboratories or dumpsites. In most cases, the source of the entries is not the Department, and the Department has not verified the entry and does not guarantee its accuracy. Members of the public must verify the accuracy of all entries by, for example, contacting local law enforcement and local health departments. The Department does not establish, implement, enforce, or certify compliance with clean-up or remediation standards for contaminated sites; the public should contact a state or local health department or environmental protection agency for that information.

DOCKETS EPA Docket Data

VERSION DATE: 12/22/05

The United States Environmental Protection Agency Docket data lists Civil Case Defendants, filing dates as far back as 1971, laws broken including section, violations that occurred, pollutants involved, penalties assessed and superfund awards by facility and location. Please refer to ICIS database as source of current data.

EC Federal Engineering Institutional Control Sites

VERSION DATE: 08/03/15

This database includes site locations where Engineering and/or Institutional Controls have been identified as part

of a selected remedy for the site as defined by United States Environmental Protection Agency official remedy decision documents. A site listing does not indicate that the institutional and engineering controls are currently in place nor will be in place once the remedy is complete; it only indicates that the decision to include either of them in the remedy is documented as of the completed date of the document. Institutional controls are actions, such as legal controls, that help minimize the potential for human exposure to contamination by ensuring appropriate land or resource use. Engineering controls include caps, barriers, or other device engineering to prevent access, exposure, or continued migration of contamination. The data included in this report was extracted from the final CERCLIS dataset (CERCLIS was a Superfund data system that EPA decommissioned in 2014 following its deployment of the Superfund Enterprise Management System), which represents program progress as of the end of fiscal year 2013.

ECHOR05 Enforcement and Compliance History Information

VERSION DATE: 03/09/19

The U.S. Environmental Protection Agency's Enforcement and Compliance History Online (ECHO) database, provides compliance and enforcement information for facilities nationwide. This database includes facilities regulated as Clean Air Act stationary sources, Clean Water Act direct dischargers, Resource Conservation and Recovery Act hazardous waste handlers, Safe Drinking Water Act public water systems along with other data, such as Toxics Release Inventory releases.

ERNSIN Emergency Response Notification System

VERSION DATE: 10/28/18

This National Response Center database contains data on reported releases of oil, chemical, radiological, biological, and/or etiological discharges into the environment anywhere in the United States and its territories. The data comes from spill reports made to the U.S. Environmental Protection Agency, U.S. Coast Guard, the National Response Center and/or the U.S. Department of Transportation.

FRSIN Facility Registry System

VERSION DATE: 10/09/18

The United States Environmental Protection Agency's Office of Environmental Information (OEI) developed the Facility Registry System (FRS) as the centrally managed database that identifies facilities, sites or places subject to environmental regulations or of environmental interest. The Facility Registry System replaced the Facility Index System or FINDS database.

HMIRSR05 Hazardous Materials Incident Reporting System

VERSION DATE: 09/30/18

The HMIRS database contains unintentional hazardous materials release information reported to the U.S. Department of Transportation located in EPA Region 5. Region 5 includes the following states: Illinois, Indiana, Michigan, Minnesota, Ohio, and Wisconsin.

ICIS Integrated Compliance Information System (formerly DOCKETS)

VERSION DATE: 03/09/19

ICIS is a case activity tracking and management system for civil, judicial, and administrative federal Environmental Protection Agency enforcement cases. ICIS contains information on federal administrative and federal judicial cases under the following environmental statutes: the Clean Air Act, the Clean Water Act, the Resource Conservation and Recovery Act, the Emergency Planning and Community Right-to-Know Act - Section 313, the Toxic Substances Control Act, the Federal Insecticide, Fungicide, and Rodenticide Act, the Comprehensive Environmental Response, Compensation, and Liability Act, the Safe Drinking Water Act, and the Marine Protection, Research, and Sanctuaries Act.

ICISNPDES Integrated Compliance Information System National Pollutant Discharge Elimination System

VERSION DATE: 07/09/17

Authorized by the Clean Water Act, the National Pollutant Discharge Elimination System (NPDES) permit program controls water pollution by regulating point sources that discharge pollutants into waters of the United States. This database is provided by the U.S. Environmental Protection Agency.

LUCIS Land Use Control Information System

VERSION DATE: 09/01/06

The LUCIS database is maintained by the U.S. Department of the Navy and contains information for former Base Realignment and Closure (BRAC) properties across the United States.

MLTS Material Licensing Tracking System

VERSION DATE: 06/29/17

MLTS is a list of approximately 8,100 sites which have or use radioactive materials subject to the United States Nuclear Regulatory Commission (NRC) licensing requirements. Disclaimer: Due to agency regulations and policies, this database contains applicant/licensee location information which may or may not be related to the physical location per MLTS site.

NPDESR05 National Pollutant Discharge Elimination System

VERSION DATE: 04/01/07

Authorized by the Clean Water Act, the National Pollutant Discharge Elimination System (NPDES) permit program controls water pollution by regulating point sources that discharge pollutants into waters of the United States. The NPDES database was collected from the U.S. Environmental Protection Agency (EPA) from December 2002 through April 2007. Refer to the PCS and/or ICIS-NPDES database as source of current data. This database includes permitted facilities located in EPA Region 5. This region includes the following states: Illinois, Indiana, Michigan, Minnesota, Ohio, and Wisconsin.

PADS PCB Activity Database System

VERSION DATE: 09/14/18

PADS Identifies generators, transporters, commercial storers and/or brokers and disposers of PCB's who are required to notify the U.S. Environmental Protection Agency of such activities.

PCSR05 Permit Compliance System

VERSION DATE: 08/01/12

The Permit Compliance System is used in tracking enforcement status and permit compliance of facilities controlled by the National Pollutant Discharge Elimination System (NPDES) under the Clean Water Act and is maintained by the United States Environmental Protection Agency's Office of Compliance. PCS is designed to support the NPDES program at the state, regional, and national levels. This database includes permitted facilities located in EPA Region 5. This region includes the following states: Illinois, Indiana, Michigan, Minnesota, Ohio, and Wisconsin. PCS has been modernized, and no longer exists. National Pollutant Discharge Elimination System (ICIS-NPDES) data can now be found in Integrated Compliance Information System (ICIS).

RCRASC RCRA Sites with Controls

VERSION DATE: 02/22/19

The Resource Conservation and Recovery Act (RCRA) gives the U.S. Environmental Protection Agency (EPA) the authority to control hazardous waste from the "cradle-to-grave." This includes the generation, transportation, treatment, storage, and disposal of hazardous waste. RCRA also set forth a framework for the management of non-hazardous solid wastes. The 1986 amendments to RCRA enabled EPA to address environmental problems that could result from underground tanks storing petroleum and other hazardous substances. This listing refers to facilities with institutional controls in place.

SEMSLIENS SEMS Lien on Property

VERSION DATE: 08/13/18

The U.S. Environmental Protection Agency's (EPA) Office of Solid Waste and Emergency Response, Office of Superfund Remediation and Technology Innovation (OSRTI), has implemented The Superfund Enterprise Management System (SEMS), formerly known as CERCLIS (Comprehensive Environmental Response, Compensation and Liability Information System) to track and report on clean-up and enforcement activities taking place at Superfund sites. SEMS represents a joint development and ongoing collaboration between Superfund's Remedial, Removal, Federal Facilities, Enforcement and Emergency Response programs. This is a listing of SEMS sites with a lien on the property.

SFLIENS CERCLIS Liens

VERSION DATE: 06/08/12

A Federal CERCLA ("Superfund") lien can exist by operation of law at any site or property at which United States Environmental Protection Agency has spent Superfund monies. These monies are spent to investigate and address releases and threatened releases of contamination. CERCLIS provides information as to the identity of these sites and properties. This database contains those CERCLIS sites where the Lien on Property action is complete. Please refer to the SEMSLIENS database as source of current data.

SSTS Section Seven Tracking System

VERSION DATE: 02/01/17

The United States Environmental Protection Agency tracks information on pesticide establishments through the Section Seven Tracking System (SSTS). SSTS records the registration of new establishments and records pesticide production at each establishment. The Federal Insecticide, Fungicide and Rodenticide Act (FIFRA) requires that production of pesticides or devices be conducted in a registered pesticide-producing or device-producing establishment. ("Production" includes formulation, packaging, repackaging, and relabeling.)

TRI Toxics Release Inventory

VERSION DATE: 12/31/16

The Toxics Release Inventory, provided by the United States Environmental Protection Agency, includes data on toxic chemical releases and waste management activities from certain industries as well as federal and tribal facilities. This inventory contains information about the types and amounts of toxic chemicals that are released each year to the air, water, and land as well as information on the quantities of toxic chemicals sent to other facilities for further waste management.

TSCA Toxic Substance Control Act Inventory

VERSION DATE: 12/31/12

The Toxic Substances Control Act (TSCA) was enacted in 1976 to ensure that chemicals manufactured, imported, processed, or distributed in commerce, or used or disposed of in the United States do not pose any unreasonable risks to human health or the environment. TSCA section 8(b) provides the United States Environmental Protection Agency authority to "compile, keep current, and publish a list of each chemical substance that is manufactured or processed in the United States." This TSCA Chemical Substance Inventory contains non-confidential information on the production amount of toxic chemicals from each manufacturer and importer site.

RCRAGR05 Resource Conservation & Recovery Act - Generator

VERSION DATE: 12/17/18

The Resource Conservation and Recovery Act (RCRA) gives the U.S. Environmental Protection Agency (EPA) the authority to control hazardous waste from the "cradle-to-grave." This includes the generation, transportation, treatment, storage, and disposal of hazardous waste. RCRA also set forth a framework for the management of non-hazardous solid wastes. The 1986 amendments to RCRA enabled EPA to address environmental problems that could result from underground tanks storing petroleum and other hazardous substances. This listing refers

to facilities currently generating hazardous waste. EPA Region 5 includes the following states: Illinois, Indiana, Michigan, Minnesota, Ohio, and Wisconsin.

RCRANGR05 Resource Conservation & Recovery Act - Non-Generator

VERSION DATE: 12/17/18

The Resource Conservation and Recovery Act (RCRA) gives the U.S. Environmental Protection Agency (EPA) the authority to control hazardous waste from the "cradle-to-grave." This includes the generation, transportation, treatment, storage, and disposal of hazardous waste. RCRA also set forth a framework for the management of non-hazardous solid wastes. The 1986 amendments to RCRA enabled EPA to address environmental problems that could result from underground tanks storing petroleum and other hazardous substances. This listing refers to facilities classified as non-generators. Non-Generators do not presently generate hazardous waste. EPA Region 5 includes the following states: Illinois, Indiana, Michigan, Minnesota, Ohio, and Wisconsin.

ALTFUELS Alternative Fueling Stations

VERSION DATE: 03/01/19

Nationwide list of alternative fueling stations made available by the U.S. Department of Energy's Office of Energy Efficiency & Renewable Energy. Includes Bio-diesel stations, Ethanol (E85) stations, Liquefied Petroleum Gas (Propane) stations, Ethanol (E85) stations, Natural Gas stations, Hydrogen stations, and Electric Vehicle Supply Equipment (EVSE).

FEMAUST FEMA Owned Storage Tanks

VERSION DATE: 12/01/16

This is a listing of FEMA owned underground and aboveground storage tank sites. For security reasons, address information is not released to the public according to the U.S. Department of Homeland Security.

HISTPST Historical Gas Stations

VERSION DATE: NR

This historic directory of service stations is provided by the Cities Service Company. The directory includes Cities Service filling stations that were located throughout the United States in 1930.

ICISCLEANERS Integrated Compliance Information System Drycleaners

VERSION DATE: 03/09/19

This is a listing of drycleaner facilities from the Integrated Compliance Information System (ICIS). The U.S. Environmental Protection Agency (EPA) tracks facilities that possess NAIC and SIC codes that classify businesses as drycleaner establishments.

MRDS Mineral Resource Data System

VERSION DATE: 03/15/16

MRDS (Mineral Resource Data System) is a collection of reports describing metallic and nonmetallic mineral resources throughout the world. Included are deposit name, location, commodity, deposit description, geologic characteristics, production, reserves, resources, and references. This database contains the records previously provided in the Mineral Resource Data System (MRDS) of USGS and the Mineral Availability System/Mineral Industry Locator System (MAS/MILS) originated in the U.S. Bureau of Mines, which is now part of USGS.

MSHA Mine Safety and Health Administration Master Index File

VERSION DATE: 03/15/19

The Mine dataset lists all Coal and Metal/Non-Metal mines under MSHA's jurisdiction since 1/1/1970. It includes such information as the current status of each mine (Active, Abandoned, NonProducing, etc.), the current owner and operating company, commodity codes and physical attributes of the mine. Mine ID is the unique key for this data. This information is provided by the United States Department of Labor - Mine Safety and Health Administration (MSHA).

BF Brownfields Management System

VERSION DATE: 03/31/19

Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties takes development pressures off of undeveloped, open land, and both improves and protects the environment. The United States Environmental Protection Agency maintains this database to track activities in the various brown field grant programs including grantee assessment, site cleanup and site redevelopment. This database included tribal brownfield sites.

DNPL Delisted National Priorities List

VERSION DATE: 02/06/19

This database includes sites from the United States Environmental Protection Agency's Final National Priorities List (NPL) where remedies have proven to be satisfactory or sites where the original analyses were inaccurate, and the site is no longer appropriate for inclusion on the NPL, and final publication in the Federal Register has occurred.

NLRRCRAT No Longer Regulated RCRA Non-CORRACTS TSD Facilities

VERSION DATE: 12/17/18

This database includes RCRA Non-Corrective Action TSD facilities that are no longer regulated by the United States Environmental Protection Agency or do not meet other RCRA reporting requirements. This listing includes facilities that formerly treated, stored or disposed of hazardous waste.

ODI Open Dump Inventory

VERSION DATE: 06/01/85

The open dump inventory was published by the United States Environmental Protection Agency. An “open dump” is defined as a facility or site where solid waste is disposed of which is not a sanitary landfill which meets the criteria promulgated under section 4004 of the Solid Waste Disposal Act (42 U.S.C. 6944) and which is not a facility for disposal of hazardous waste. This inventory has not been updated since June 1985.

RCRAT Resource Conservation & Recovery Act - Non-CORRACTS Treatment, Storage & Disposal Facilities

VERSION DATE: 12/17/18

The Resource Conservation and Recovery Act (RCRA) gives the U.S. Environmental Protection Agency (EPA) the authority to control hazardous waste from the "cradle-to-grave." This includes the generation, transportation, treatment, storage, and disposal of hazardous waste. RCRA also set forth a framework for the management of non-hazardous solid wastes. The 1986 amendments to RCRA enabled EPA to address environmental problems that could result from underground tanks storing petroleum and other hazardous substances. This listing refers to facilities recognized as hazardous waste treatment, storage, and disposal sites (TSD).

SEMS Superfund Enterprise Management System

VERSION DATE: 03/11/19

The U.S. Environmental Protection Agency's (EPA) Office of Solid Waste and Emergency Response, Office of Superfund Remediation and Technology Innovation (OSRTI), has implemented The Superfund Enterprise Management System (SEMS), formerly known as CERCLIS (Comprehensive Environmental Response, Compensation and Liability Information System) to track and report on clean-up and enforcement activities taking place at Superfund sites. SEMS represents a joint development and ongoing collaboration between Superfund's Remedial, Removal, Federal Facilities, Enforcement and Emergency Response programs.

SEMSARCH Superfund Enterprise Management System Archived Site Inventory

VERSION DATE: 03/11/19

The U.S. Environmental Protection Agency’s (EPA) Superfund Enterprise Management System Archived Site Inventory (List 8R Archived) replaced the CERCLIS NFRAP reporting system in 2015. This listing reflects sites at which the EPA has determined that assessment has been completed and no further remedial action is planned under the Superfund program.

SMCRA Surface Mining Control and Reclamation Act Sites

VERSION DATE: 03/19/19

An inventory of land and water impacted by past mining (primarily coal mining) is maintained by the Office of Surface Mining Reclamation and Enforcement (OSMRE) to provide information needed to implement the Surface Mining Control and Reclamation Act of 1977 (SMCRA). The inventory contains information on the location, type,

and extent of AML impacts, as well as, information on the cost associated with the reclamation of those problems. The inventory is based upon field surveys by State, Tribal, and OSMRE program officials. It is dynamic to the extent that it is modified as new problems are identified and existing problems are reclaimed.

USUMTRCA Uranium Mill Tailings Radiation Control Act Sites

VERSION DATE: 03/04/17

The Legacy Management Office of the Department of Energy (DOE) manages radioactive and chemical waste, environmental contamination, and hazardous material at over 100 sites across the U.S. The L.M. Office manages this database of sites registered under the Uranium Mill Tailings Control Act (UMTRCA).

DOD Department of Defense Sites

VERSION DATE: 12/01/14

This information originates from the National Atlas of the United States Federal Lands data, which includes lands owned or administered by the Federal government. Army DOD, Army Corps of Engineers DOD, Air Force DOD, Navy DOD and Marine DOD areas of 640 acres or more are included.

FUDS Formerly Used Defense Sites

VERSION DATE: 06/01/15

The Formerly Used Defense Sites (FUDS) inventory includes properties previously owned by or leased to the United States and under Secretary of Defense Jurisdiction, as well as Munitions Response Areas (MRAs). The remediation of these properties is the responsibility of the Department of Defense. This data is provided by the U.S. Army Corps of Engineers (USACE), the boundaries/polygon data are based on preliminary findings and not all properties currently have polygon data available. DISCLAIMER: This data represents the results of data collection/processing for a specific USACE activity and is in no way to be considered comprehensive or to be used in any legal or official capacity as presented on this site. While the USACE has made a reasonable effort to insure the accuracy of the maps and associated data, it should be explicitly noted that USACE makes no warranty, representation or guaranty, either expressed or implied, as to the content, sequence, accuracy, timeliness or completeness of any of the data provided herein. For additional information on Formerly Used Defense Sites please contact the USACE Public Affairs Office at (202) 528-4285.

FUSRAP Formerly Utilized Sites Remedial Action Program

VERSION DATE: 03/04/17

The U.S. Department of Energy (DOE) established the Formerly Utilized Sites Remedial Action Program (FUSRAP) in 1974 to remediate sites where radioactive contamination remained from the Manhattan Project and early U.S. Atomic Energy Commission (AEC) operations. The DOE Office of Legacy Management (LM) established long-term surveillance and maintenance (LTS&M) requirements for remediated FUSRAP sites. DOE evaluates the final site conditions of a remediated site on the basis of risk for different future uses. DOE then confirms that LTS&M requirements will maintain protectiveness.

NLRRCRAC No Longer Regulated RCRA Corrective Action Facilities

VERSION DATE: 12/17/18

This database includes RCRA Corrective Action facilities that are no longer regulated by the United States Environmental Protection Agency or do not meet other RCRA reporting requirements.

NMS Former Military Nike Missile Sites

VERSION DATE: 12/01/84

This information was taken from report DRXTH-AS-IA-83A016 (Historical Overview of the Nike Missile System, 12/1984) which was performed by Environmental Science and Engineering, Inc. for the U.S. Army Toxic and Hazardous Materials Agency Assessment Division. The Nike system was deployed between 1954 and the mid-1970's. Among the substances used or stored on Nike sites were liquid missile fuel (JP-4); starter fluids (UDKH, aniline, and furfuryl alcohol); oxidizer (IRFNA); hydrocarbons (motor oil, hydraulic fluid, diesel fuel, gasoline, heating oil); solvents (carbon tetrachloride, trichloroethylene, trichloroethane, stoddard solvent); and battery electrolyte. The quantities of material a disposed of and procedures for disposal are not documented in published reports. Virtually all information concerning the potential for contamination at Nike sites is confined to personnel who were assigned to Nike sites. During deactivation most hardware was shipped to depot-level supply points. There were reportedly instances where excess materials were disposed of on or near the site itself at closure. There was reportedly no routine site decontamination.

NPL National Priorities List

VERSION DATE: 02/06/19

This database includes United States Environmental Protection Agency (EPA) National Priorities List sites that fall under the EPA's Superfund program, established to fund the cleanup of the most serious uncontrolled or abandoned hazardous waste sites identified for possible long-term remedial action.

PNPL Proposed National Priorities List

VERSION DATE: 02/06/19

This database contains sites proposed to be included on the National Priorities List (NPL) in the Federal Register. The United States Environmental Protection Agency investigates these sites to determine if they may present long-term threats to public health or the environment.

RCRAC Resource Conservation & Recovery Act - Corrective Action Facilities

VERSION DATE: 12/17/18

The Resource Conservation and Recovery Act (RCRA) gives the U.S. Environmental Protection Agency (EPA) the authority to control hazardous waste from the "cradle-to-grave." This includes the generation, transportation, treatment, storage, and disposal of hazardous waste. RCRA also set forth a framework for the management of non-hazardous solid wastes. The 1986 amendments to RCRA enabled EPA to address environmental problems

that could result from underground tanks storing petroleum and other hazardous substances. This listing refers to facilities with corrective action activity.

RCRASUBC Resource Conservation & Recovery Act - Subject to Corrective Action Facilities

VERSION DATE: 12/17/18

The Resource Conservation and Recovery Act (RCRA) gives the U.S. Environmental Protection Agency (EPA) the authority to control hazardous waste from the "cradle-to-grave." This includes the generation, transportation, treatment, storage, and disposal of hazardous waste. RCRA also set forth a framework for the management of non-hazardous solid wastes. The 1986 amendments to RCRA enabled EPA to address environmental problems that could result from underground tanks storing petroleum and other hazardous substances. This listing refers to facilities subject to corrective actions.

RODS Record of Decision System

VERSION DATE: 02/06/19

These decision documents maintained by the United States Environmental Protection Agency describe the chosen remedy for NPL (Superfund) site remediation. They also include site history, site description, site characteristics, community participation, enforcement activities, past and present activities, contaminated media, the contaminants present, and scope and role of response action.

CLEANCDL IDEM Cleaned Clandestine Drug Labs

VERSION DATE: 12/11/18

This list of certified cleaned meth lab locations is provided by the Indiana Department of Environmental Management.

ICEC Institutional Engineering Controls Registry

VERSION DATE: 11/05/18

This registry is provided by the Indiana's Department of Environmental Management (IDEM) Office of Land Quality. According to the IDEM, this office utilizes a system of risk-based closure to address releases of hazardous substances or petroleum. When contamination remains on site, a legal or administrative measure called an Institutional Control (IC) may be needed. An IC protects human health and the environment by restricting property activity, use, or access to minimize exposure to contamination. The registry contains remediation program sites from the Leaking Underground Storage Tanks Program, Voluntary Remediation Program, State Cleanup Program, RCRA Corrective Action, Federal Programs, and the Indiana Brownfields Program (administered by the Indiana Finance Authority), as well as solid waste sites subject to 329 IAC 10 deed notice requirements.

SPCDL State Police Drug Lab Locations

VERSION DATE: 03/27/19

This list of clandestine drug labs is provided by the Indiana State Police (ISP). The ISP has been tracking seized locations since 2007.

SPILLS Spills Listing

VERSION DATE: 10/31/18

This listing of reported spills is maintained by the Emergency Response Section of the Indiana Department of Environmental Management (IDEM). The primary role of the Emergency Response Section is to expedite spill response actions from persons experiencing spills to soil and water.

TIERII Tier II Facilities

VERSION DATE: 12/31/17

This database contains a list of Tier II facilities that have reported to the Indiana Department of Environmental Management (IDEM). Requirements of Tier II facilities are determined based on the Emergency Planning and Community Right to Know Act (EPCRA).

ININDWASTE Industrial Waste Sites

VERSION DATE: 08/04/13

Environmental Records Definitions - STATE (IN)

The listing contains industrial waste site locations in Indiana, provided by personnel of Indiana Department of Environmental Management, Office of Land Quality.

OISC Office of Indiana State Chemist Database

VERSION DATE: 10/30/18

This list of Pesticide/Fertilizer Applicators and Restricted Use Pesticide (RUP) Dealers is maintained by Office of Indiana State Chemist at Purdue University. RUP Dealer Registration is required of any firm that sells or offers to sell RUP to end users (certified applicators) of those pesticides. A RUP dealer registration is NOT required if the location is used solely to store pesticides.

RUST Registered Underground Storage Tanks

VERSION DATE: 12/01/18

Indiana's Department of Environmental Management (IDEM) Office of Land Quality maintains this of underground storage tanks.

BF Brownfield Sites

VERSION DATE: 01/09/19

The Indiana Finance Authority (IFA) provides this list of brownfield program sites. According to the IFA, the list is not an inventory of all brownfield sites in Indiana, but rather those sites at which the Indiana Brownfields Program has considered or provided financial, legal or technical assistance. In addition, this list serves as the Program's public record of any institutional controls (e.g., environmental restrictive covenants) required at Program sites.

CAFO Confined Animal Feeding Operation Permits

VERSION DATE: 02/25/15

This dataset, provided by the Indiana Department of Environmental Management (IDEM), consists of Confined Feeding Operations and Concentrated Animal Feeding Operations with a size designation of animals that IDEM regulates for environmental concerns, as required by Indiana Code 13-18-10.

INOPENDUMP Open Dump Waste Sites

VERSION DATE: 04/16/10

Open Dumps are sites that are not regulated and are illegal dump sites of solid waste. This listing is maintained by the Indiana Department of Environmental Management.

LF Landfill Sites

VERSION DATE: 02/14/19

This database, provided to the Indiana Geological Survey (IGS) from the Indiana Department of Environmental Management (IDEM), Office of Land Quality, consists of landfill sites. The landfill data includes boundaries for open dump sites, approved landfills, and permitted landfills as of April 2015. Disclaimer: this dataset is not complete, but comprises the waste boundaries of landfills as a work in progress. IDEM will periodically update and add new boundaries. The closure date for these landfills runs from the late 1960's to today. Most of them are closed, but a number of them are still active today.

LUST Leaking Underground Storage Tanks

VERSION DATE: 01/01/19

Indiana's Department of Environmental Management (IDEM) Office of Land Quality maintains this of leaking underground storage tanks. The report lists a priority and a disposition for each site. IDEM assigns a priority to each site to ensure that the ones with the greatest chance of impacting people are cleaned up first. The priority is based on information submitted by the responsible party and/or their consultant.

SCP State Cleanup Sites

VERSION DATE: 06/28/18

This database contains State Cleanup Program site locations in Indiana. The data is provided by the Indiana Department of Environmental Management (IDEM), and also includes 2015 data from the Indiana Geological Survey (IGS). These sites are on the Commissioner's Bulletin or referred remedial response location or other IDEM programs that require mitigation of risk of human health and the environmental through investigation, remediation or institutional controls. According to the IDEM, the State Cleanup Section was modeled after the federal Superfund Program; however, the State Cleanup Section differs from the Superfund Program in some respects. The State Cleanup Section has jurisdiction over remediation of petroleum releases in addition to remediation of releases of hazardous substances. IGS provides the data "as is", without warranty.

SWF Solid Waste Facilities

VERSION DATE: 08/20/18

The Indiana Department of Environmental Management maintains this list of facilities with solid waste permits.

TIRE Waste Tire Sites

VERSION DATE: 08/20/18

This is a state wide listing of waste tire facilities provided Indiana Department of Environmental Management.

VCP Voluntary Cleanup Sites

VERSION DATE: 10/19/18

This database contains Voluntary Remediation Program site locations in Indiana. The data is provided by the

Indiana Department of Environmental Management (IDEM), and also includes 2015 data from the Indiana Geological Survey (IGS). According to the IDEM, this program encourages environmental cleanups; facilitates the redevelopment, sale, and reuse of commercial and industrial properties; and reduces the risks that contaminants pose to human health and the environment. The VRP provides a process for property owners, operators, potential purchasers, and third parties to voluntarily address property that is or may be contaminated. Participants are typically current or past property owners, current or past lessees, and prospective purchasers. Local units of government with property obtained by default or with an interest in property development may also participate. IGS data is provided “as is”, without warranty.

WDS Waste Disposal Sites

VERSION DATE: 10/19/18

This database, provided to the Indiana Geological Survey (IGS) from the Indiana Department of Environmental Management (IDEM), Office of Land Quality, consists of waste disposal sites. The waste disposal sites data, as of June 2013, includes constructions/demolition waste, composting of CFO waste, clean fill, municipal, non-municipal, open dumps, restricted waste, surface impoundments, sanitary landfills, incinerators, material recovery, medical wastes, recycling, and waste transfer sites. IGS provides this data “as is”, without warranty.

SF State Superfund Sites

VERSION DATE: 10/19/18

This database contains Superfund Program Facilities in Indiana. The data is provided by the Indiana Department of Environmental Management (IDEM), and also includes 2015 data from the Indiana Geological Survey (IGS). According to the IDEM, their Office of Land Quality Superfund program works with the U.S. Environmental Protection Agency to clean up sites contaminated with hazardous waste that may require complex investigations, significant cleanup actions, and long-term attention. The program involves a multi-phase process that begins with an assessment to determine if contamination is present that may impact a community. Sites that are determined to be a problem are placed on the National Priorities List. IGS location information and data is provided “as is”, without warranty.

USTR05 Underground Storage Tanks On Tribal Lands

VERSION DATE: 10/12/18

This database, provided by the United States Environmental Protection Agency (EPA), contains underground storage tanks on Tribal lands located in EPA Region 5. Region 5 includes the following states: Illinois, Indiana, Michigan, Minnesota, Ohio, and Wisconsin.

LUSTR05 Leaking Underground Storage Tanks On Tribal Lands

VERSION DATE: 10/12/18

This database, provided by the United States Environmental Protection Agency (EPA), contains leaking underground storage tanks on Tribal lands located in EPA Region 5. Region 5 includes the following states: Illinois, Indiana, Michigan, Minnesota, Ohio, and Wisconsin.

ODINDIAN Open Dump Inventory on Tribal Lands

VERSION DATE: 11/08/06

This Indian Health Service database contains information about facilities and sites on tribal lands where solid waste is disposed of, which are not sanitary landfills or hazardous waste disposal facilities, and which meet the criteria promulgated under section 4004 of the Solid Waste Disposal Act (42 U.S.C. 6944).

INDIANRES Indian Reservations

VERSION DATE: 01/01/00

The Department of Interior and Bureau of Indian Affairs maintains this database that includes American Indian Reservations, off-reservation trust lands, public domain allotments, Alaska Native Regional Corporations and Recognized State Reservations.

Appendix E

Web Soil Survey Map and Unit Description

Commercial Building
216 South College Avenue
Bloomington, Indiana, 47404

United States Department of Agriculture

NRCS

Natural Resources Conservation Service

A product of the National Cooperative Soil Survey, a joint effort of the United States Department of Agriculture and other Federal agencies, State agencies including the Agricultural Experiment Stations, and local participants

Custom Soil Resource Report for Monroe County, Indiana

216 S. College Avenue

April 26, 2019

Preface

Soil surveys contain information that affects land use planning in survey areas. They highlight soil limitations that affect various land uses and provide information about the properties of the soils in the survey areas. Soil surveys are designed for many different users, including farmers, ranchers, foresters, agronomists, urban planners, community officials, engineers, developers, builders, and home buyers. Also, conservationists, teachers, students, and specialists in recreation, waste disposal, and pollution control can use the surveys to help them understand, protect, or enhance the environment.

Various land use regulations of Federal, State, and local governments may impose special restrictions on land use or land treatment. Soil surveys identify soil properties that are used in making various land use or land treatment decisions. The information is intended to help the land users identify and reduce the effects of soil limitations on various land uses. The landowner or user is responsible for identifying and complying with existing laws and regulations.

Although soil survey information can be used for general farm, local, and wider area planning, onsite investigation is needed to supplement this information in some cases. Examples include soil quality assessments (http://www.nrcs.usda.gov/wps/portal/nrcs/main/soils/health/) and certain conservation and engineering applications. For more detailed information, contact your local USDA Service Center (https://offices.sc.egov.usda.gov/locator/app?agency=nrcs) or your NRCS State Soil Scientist (http://www.nrcs.usda.gov/wps/portal/nrcs/detail/soils/contactus/?cid=nrcs142p2_053951).

Great differences in soil properties can occur within short distances. Some soils are seasonally wet or subject to flooding. Some are too unstable to be used as a foundation for buildings or roads. Clayey or wet soils are poorly suited to use as septic tank absorption fields. A high water table makes a soil poorly suited to basements or underground installations.

The National Cooperative Soil Survey is a joint effort of the United States Department of Agriculture and other Federal agencies, State agencies including the Agricultural Experiment Stations, and local agencies. The Natural Resources Conservation Service (NRCS) has leadership for the Federal part of the National Cooperative Soil Survey.

Information about soils is updated periodically. Updated information is available through the NRCS Web Soil Survey, the site for official soil survey information.

The U.S. Department of Agriculture (USDA) prohibits discrimination in all its programs and activities on the basis of race, color, national origin, age, disability, and where applicable, sex, marital status, familial status, parental status, religion, sexual orientation, genetic information, political beliefs, reprisal, or because all or a part of an individual's income is derived from any public assistance program. (Not all prohibited bases apply to all programs.) Persons with disabilities who require

alternative means for communication of program information (Braille, large print, audiotape, etc.) should contact USDA's TARGET Center at (202) 720-2600 (voice and TDD). To file a complaint of discrimination, write to USDA, Director, Office of Civil Rights, 1400 Independence Avenue, S.W., Washington, D.C. 20250-9410 or call (800) 795-3272 (voice) or (202) 720-6382 (TDD). USDA is an equal opportunity provider and employer.

Soil Map

The soil map section includes the soil map for the defined area of interest, a list of soil map units on the map and extent of each map unit, and cartographic symbols displayed on the map. Also presented are various metadata about data used to produce the map, and a description of each soil map unit.

MAP INFORMATION

The soil surveys that comprise your AOI were mapped at 1:15,800.

Warning: Soil Map may not be valid at this scale.

Enlargement of maps beyond the scale of mapping can cause misunderstanding of the detail of mapping and accuracy of soil line placement. The maps do not show the small areas of contrasting soils that could have been shown at a more detailed scale.

Please rely on the bar scale on each map sheet for map measurements.

Source of Map: Natural Resources Conservation Service
Web Soil Survey URL:
Coordinate System: Web Mercator (EPSG:3857)

Maps from the Web Soil Survey are based on the Web Mercator projection, which preserves direction and shape but distorts distance and area. A projection that preserves area, such as the Albers equal-area conic projection, should be used if more accurate calculations of distance or area are required.

This product is generated from the USDA-NRCS certified data as of the version date(s) listed below.

Soil Survey Area: Monroe County, Indiana
Survey Area Data: Version 25, Sep 7, 2018

Soil map units are labeled (as space allows) for map scales 1:50,000 or larger.

Date(s) aerial images were photographed: Apr 25, 2014—Mar 20, 2017

The orthophoto or other base map on which the soil lines were compiled and digitized probably differs from the background imagery displayed on these maps. As a result, some minor shifting of map unit boundaries may be evident.

Map Unit Descriptions (216 S. College Avenue)

The map units delineated on the detailed soil maps in a soil survey represent the soils or miscellaneous areas in the survey area. The map unit descriptions, along with the maps, can be used to determine the composition and properties of a unit.

A map unit delineation on a soil map represents an area dominated by one or more major kinds of soil or miscellaneous areas. A map unit is identified and named according to the taxonomic classification of the dominant soils. Within a taxonomic class there are precisely defined limits for the properties of the soils. On the landscape, however, the soils are natural phenomena, and they have the characteristic variability of all natural phenomena. Thus, the range of some observed properties may extend beyond the limits defined for a taxonomic class. Areas of soils of a single taxonomic class rarely, if ever, can be mapped without including areas of other taxonomic classes. Consequently, every map unit is made up of the soils or miscellaneous areas for which it is named and some minor components that belong to taxonomic classes other than those of the major soils.

Most minor soils have properties similar to those of the dominant soil or soils in the map unit, and thus they do not affect use and management. These are called noncontrasting, or similar, components. They may or may not be mentioned in a particular map unit description. Other minor components, however, have properties and behavioral characteristics divergent enough to affect use or to require different management. These are called contrasting, or dissimilar, components. They generally are in small areas and could not be mapped separately because of the scale used. Some small areas of strongly contrasting soils or miscellaneous areas are identified by a special symbol on the maps. If included in the database for a given area, the contrasting minor components are identified in the map unit descriptions along with some characteristics of each. A few areas of minor components may not have been observed, and consequently they are not mentioned in the descriptions, especially where the pattern was so complex that it was impractical to make enough observations to identify all the soils and miscellaneous areas on the landscape.

The presence of minor components in a map unit in no way diminishes the usefulness or accuracy of the data. The objective of mapping is not to delineate pure taxonomic classes but rather to separate the landscape into landforms or landform segments that have similar use and management requirements. The delineation of such segments on the map provides sufficient information for the development of resource plans. If intensive use of small areas is planned, however,

onsite investigation is needed to define and locate the soils and miscellaneous areas.

An identifying symbol precedes the map unit name in the map unit descriptions. Each description includes general facts about the unit and gives important soil properties and qualities.

Soils that have profiles that are almost alike make up a *soil series*. Except for differences in texture of the surface layer, all the soils of a series have major horizons that are similar in composition, thickness, and arrangement.

Soils of one series can differ in texture of the surface layer, slope, stoniness, salinity, degree of erosion, and other characteristics that affect their use. On the basis of such differences, a soil series is divided into *soil phases*. Most of the areas shown on the detailed soil maps are phases of soil series. The name of a soil phase commonly indicates a feature that affects use or management. For example, Alpha silt loam, 0 to 2 percent slopes, is a phase of the Alpha series.

Some map units are made up of two or more major soils or miscellaneous areas. These map units are complexes, associations, or undifferentiated groups.

A *complex* consists of two or more soils or miscellaneous areas in such an intricate pattern or in such small areas that they cannot be shown separately on the maps. The pattern and proportion of the soils or miscellaneous areas are somewhat similar in all areas. Alpha-Beta complex, 0 to 6 percent slopes, is an example.

An *association* is made up of two or more geographically associated soils or miscellaneous areas that are shown as one unit on the maps. Because of present or anticipated uses of the map units in the survey area, it was not considered practical or necessary to map the soils or miscellaneous areas separately. The pattern and relative proportion of the soils or miscellaneous areas are somewhat similar. Alpha-Beta association, 0 to 2 percent slopes, is an example.

An *undifferentiated group* is made up of two or more soils or miscellaneous areas that could be mapped individually but are mapped as one unit because similar interpretations can be made for use and management. The pattern and proportion of the soils or miscellaneous areas in a mapped area are not uniform. An area can be made up of only one of the major soils or miscellaneous areas, or it can be made up of all of them. Alpha and Beta soils, 0 to 2 percent slopes, is an example.

Some surveys include *miscellaneous areas*. Such areas have little or no soil material and support little or no vegetation. Rock outcrop is an example.

Monroe County, Indiana

Ua—Udorthents, loamy

Map Unit Setting

National map unit symbol: kz9d
Elevation: 340 to 1,020 feet
Mean annual precipitation: 40 to 46 inches
Mean annual air temperature: 52 to 57 degrees F
Frost-free period: 170 to 200 days
Farmland classification: Not prime farmland

Map Unit Composition

Udorthents, loamy and similar soils: 100 percent
Estimates are based on observations, descriptions, and transects of the mapunit.

Description of Udorthents, Loamy

Properties and qualities

Depth to restrictive feature: More than 80 inches
Depth to water table: More than 80 inches
Frequency of flooding: None
Frequency of ponding: None

Interpretive groups

Land capability classification (irrigated): None specified
Land capability classification (nonirrigated): 8
Other vegetative classification: Trees/Timber (Woody Vegetation)
Hydric soil rating: Unranked

1.0 INTRODUCTION

BCA Environmental Consultants, LLC (BCA) was requested by Mr. Brian Payne, Assistant Director, Office of Economic and Sustainable Development, City of Bloomington, Indiana to perform a Phase II Environmental Site Assessment (ESA) of the commercial building property located at 216 S. College Ave. in Bloomington, IN (Subject Site). This report is prepared for the City of Bloomington and is funded through a U.S. EPA Brownfield Assessment Grant to the City of Bloomington (Cooperative Agreement No. BF-00E02280). The following report presents the information obtained during the investigation and provides conclusions and recommendations based on the information.

The Subject Site is comprised of three (3) parcels totaling approximately 1.7 acres of land that is situated within the City of Bloomington. The surrounding area is mixed use commercial and municipal properties. The Subject Site is located on the west side of College Avenue between 3rd and 4th Streets (**Figure 1**). The Subject Site is currently occupied.

A Phase I ESA of the Subject Site was conducted for the City of Bloomington by BCA and was dated May 29, 2019. The Phase I ESA was funded through the U.S. EPA Brownfield Assessment Grant to the City of Bloomington. The Phase I ESA identified the following recognized environmental conditions (RECs) at the Subject Site:

- The historical presence of a rail spur on the western portion of the Subject Site along with coal storage piles.
- The historical presence of two gasoline filling stations that operated on the north-central and north-eastern portions of the Subject Site from the 1920s through at least the late 1940s.
- The historical presence of two (2) battery and ignition service stations in the north-central portion of the Subject Site from the 1920s through at least the late 1940s;
- Vulcanizing activities, reported to historically have been present on the Subject Site;
- The presence of a trench drain and suspected oil/water separator (or grease trap) observed on the northwest portion of the Subject Site..

The purpose of the Phase II ESA was to implement the recommendations of the Phase I ESA and investigate the identified RECs to confirm the presence or absence of contaminants. The scope of work was not sufficient to determine the extent and magnitude of contamination, if it is present.

2.0 METHODOLOGY

The investigation procedures will follow BCA's Bloomington Quality Assurance Project Plan and Field Standard Operating Procedures (QAPP and Field SOP) and those recommended by the IDEM 2012 Remediation Closure Guide (RCG), regulations and industry-accepted practices. Investigation results are compared to RCG residential closure levels (RCLs) and industrial closure levels (ICLs) from the RCG Appendix A, Table A-6: 2019 Screening Levels.

2.1 Sampling and Analysis Plan and Health and Safety Plan

A site-specific SAP and HASP were prepared for the Subject Site prior to Phase II site activities and were approved by the EPA Region V Brownfield Program. Unless otherwise noted, the plan and procedures followed the SAP. A copy of the SAP and HASP is provided in **Appendix A**.

2.2 Geophysical Survey

A limited geophysical survey was conducted for BCA by American Locating Service at the Subject Site on May 13, 2019, prior to commencing drilling activities, to identify the locations of any unknown and buried utilities. The survey included GPR scans of areas of interest and near the proposed borings to identify any potential buried utility or other sub-surface anomalies. All detected utilities and all linear anomalies were marked with marking paint as possible utility locations. The suspected former UST locations were also marked with paint. The identified subsurface utilities and former UST locations are included on **Figure 2**.

2.3 Drilling Methods

The locations of the borings were selected based on information obtained from the Phase I ESA (BCA 2019) as most likely to be impacted by the identified RECs. The soil probes were advanced by Enviro-Dynamics of Hebron, Indiana using a track-mounted Geoprobe direct-push probe system. The soil probes were installed in 5-foot long sections using a 2.5-inch diameter hollow steel sampling rod that contained a clear acetate liner. The rods were pushed into the soil or driven with a hydraulic hammer. A soil core encased in the disposable acetate liner was advanced through the substratum. The liners allowed the collection of continuous, relatively undisturbed soil cores, minimizing cross-contamination between both stratigraphic horizons and probe locations. The liners containing the soil cores were extracted from the sample rods and were split in the field and sampled by BCA via the screening process described below. The soil was then logged in accordance with the USCS. Specific soil descriptions, screening results and corresponding depths are included on the soil boring logs in **Appendix B**.

Boring locations were recorded by means of a Trimble Nomad 900G sub-3-meter accuracy (Post-processed) GPS receiver. GPS coordinate data table is presented in **Appendix C**.

2.4 Soil Sampling

The subsurface field investigation was conducted May 16th, 2019 for the purpose of determining subsurface environmental conditions on the property.

A total of five (5) soil probes (SP-1 – SP-5) were driven throughout the Subject Site. All probes were designated for groundwater sampling and were to be driven to refusal or into first groundwater at depths of 11 to 25 feet bgs. The probes were placed as indicated on the attached site map (**Figure 2**) with adjustments from the SAP based on site conditions, utility locations, and observations made by BCA personnel upon conducting the utility locate and arrival at the Subject Site.

Soil cores were collected continuously throughout the depth of each of the probes. The soil cores were field screened and logged as described below, and two (2) soil samples from each probe were analyzed for VOCs; at least two (2) samples from each probe for SVOCs/PAHs and 14 metals (antimony, arsenic, barium, beryllium, cadmium, chromium, copper, lead, mercury, nickel, selenium, silver, thallium and zinc) and hexavalent chromium. If soil screening did not suggest the presence of VOCs, then soil from the vadose (smear) zone or from the deepest soil probe interval were selected for VOC analysis.

2.5 Soil Vapor Screening

Soil cores collected in acetate liners via the direct-push probing rig were field screened for organic vapors via headspace analysis (i.e. vapor screening). The acetate liners were split open and immediately scanned with a RAE Systems MiniRAE 3000 PID equipped with a 10.6eV bulb calibrated on 100 ppm isobutylene span gas. A representative soil type or the soil horizon with the highest PID reading was collected by means of U.S EPA SW-846 Method 5035a for VOC analysis.

2.6 Groundwater Sampling

Groundwater was sampled from each of the designated probes where measurable amounts of groundwater was encountered using sampling techniques described below. Groundwater samples were analyzed for VOCs, SVOCs/PAHs, 14 metals and hexavalent chromium. Field filtered groundwater samples were collected for follow-up analysis based on the results of the unfiltered samples. Follow-up analysis consisted of one (1) field

filtered sample was analyzed for one metal and one (1) field filtered sample was analyzed for two metals.

Groundwater samples were collected by use of temporary 1" PVC sampling points with 5-foot screens placed in the three (3) boreholes (SP-1, SP-2 & SP-3), and 10-foot screens placed in two (2) boreholes (SP-4 & SP-5). Four (4) probes were driven past first groundwater.

Soil probe SP-2 encountered refusal twice before achieving a depth of 8.2 feet when refusal (possibly due to bedrock) was encountered. The temporary sampling point in SP-2 was left overnight, but no groundwater was encountered. SP-1 hit refusal at a depth of 13.34 feet; SP-3 was driven to a depth of 10.38 feet; SP-4 was driven to a depth of 10.92 feet; SP-5 was driven to a depth of 18.76 feet.

Temporary groundwater sampling points were left for at least 4 hours before sampling. With the exceptions described below, groundwater was purged and sampled following the IDEM Micro-Purge (Low-Flow) Sampling Option (reformatted June 6, 2012) to the extent possible. Field parameters (Temperature, Conductivity, Dissolved Oxygen, pH, and Oxygen Reduction Potential) were monitored and recorded at each sampling point during purging until at least three (3) parameters have stabilized. Micro-Purge sampling was conducted with dedicated HDPE tubing and a non-contact stainless steel submersible bladder pump equipped with a polyethylene bladder. If groundwater monitoring parameters did not stabilize, a sample was collected regardless, and a note recorded in the sample log. Field filtered samples were collected by passing the groundwater through a dedicated, disposable in-line 10-micron (um) cartridge filter. Approximately 1.5 to 1.75 gallons of water was purged prior to sampling the groundwater at each location. Groundwater sampling logs are included in **Appendix D**.

Low-Flow Sampling Exceptions:

Due to shallow refusal in SP-2 no groundwater water was encountered in this location. Also, due to poor recharge in SP-3, measured water levels were below the top of the bladder pump, preventing water level readings from being taken during low-flow purging. The sample point went dry while purging, so the sample point was given time to recharge and pumped dry a second time. SP-3 was sampled after being pumped dry twice. The total drawdown from static level at SP-1 and SP-5 was greater than 0.10 foot (due to only moderate permeability), but otherwise the probes met low-flow conditions.

3.0 RESULTS

Soil descriptions and the results of field screening are presented on the soil boring logs in **Appendix B**. Groundwater sample logs with field parameters are presented in **Appendix D**. The analytical laboratory reports and chain-of-custody forms are presented in **Appendix E**, and laboratory results are summarized in Section 3.3 – 3.4 below and in **Tables 1 - 8**.

3.1 Physical Setting/Subsurface Conditions

As estimated from the U.S. Geologic Survey 7.5 Minute Series Topographic Quadrangle Map for Bloomington, Indiana (2013; C.I. = 10 feet), the elevation of the Subject Site is approximately 750 feet above mean sea level, relative to the North American Vertical Datum of 1988. The Subject Site is situated on relatively level terrain. Surface drainage in the overall area of the Subject Site is generally to the south-southeast toward Clear Creek located 0.4 miles south southeast of the Subject Site. However, surface drainage at the Subject Site flows to the adjacent streets and municipal storm water system.

3.1.1 Soils

The soil under the Subject Site is mapped as belonging to one (1) soil type:

- Udorthents are human-altered and human-transported (HAHT) soils and materials. HAHT soils include those intentionally and substantially modified by humans for specific purposes (e.g., terraced agriculture, building support, mining, transportation, etc.). They do not include soils modified through standard agricultural practices (such as shallow plowing, liming, and fertilization) or farmed soils with unintended wind and water erosion (Web Soil Survey).

3.1.2 Surficial Geology

The area of the Subject Site is underlain by approximately 5 to 15 feet of unconsolidated deposits that lie on Mississippian age bedrock (Fenelon, et al, 1994). Total thickness of unconsolidated deposits overlying bedrock in Monroe County is commonly reported as 6 to 25 feet. The unconsolidated sediments consist of Terra Rossa – red, clayey regolith, 5 to 50 feet thick, over limestone of Middle Mississippian age.

3.1.3 Bedrock Geology

The Subject Site and surrounding area lie within the Mitchell Plateau physiographic unit within the Southern Hills and Lowlands regional physiographic province (Gray, 2000). The Mitchell Plateau is bounded by the older rocks of Norman Upland on the east and the younger rocks of the Crawford Upland to the west. The Mitchell Plateau (also referred to as the Mitchell Plain) is a karst area in Indiana of relatively low relief. An extensive underlying cave system developed in Mississippian age limestone bedrock. Surface

drainage is rare due to most streams in the area disappearing into caves or joints within the rock.

Bedrock at the Subject Site is reported to be the Mississippian-aged Sanders Group (that includes the Harrodsburg and Salem Limestones). The Sanders Group consists of a variety of carbonate rocks in complex facies relationships. The Ramp Creek and Muldraugh Formations at the base of the group are dominantly a mixture of fine-grained dolomite and limestone. Cherty and siliceous intervals are common, and minor amounts of siltstone and shale are present. Above that interval in the Harrodsburg Limestone, well-cemented bioclastic calcarenites and calcirudites are dominant over argillaceous limestone, dolosiltites, and shale. The abundance of geodes and chert decreases upward in the group. The Salem Limestone except for the Somerset Shale Member at its base is dominated by porous calcarenite, although it contains a wide variety of other kinds of limestone. (IGWS)

3.1.4 Hydrology

Surface Water

The Subject Site lies within the East Fork White River basin, which has a total drainage area of 5,746 square miles in south-central Indiana. In general, drainage of the Mitchell Plain (including the Subject Site) in Monroe County is considerably different from the rest of the basin; most runoff quickly leaves the surface by entering sinkholes and becoming part of the ground-water system. In the streams that do flow across the Mitchell Plain, some surface water is intercepted by swallow holes and diverted underground into either the groundwater system or subterranean channels. (Gray, 2000) Surface water drainage from the Subject Site flows south towards Clear Creek, located 0.4 mile to the south-southeast.

Unconsolidated Aquifer System

The Subject Site lies in the Dissected Till and Residuum / Unglaciated Southern Hills and Lowlands Aquifer System. Total thickness of unconsolidated deposits overlying bedrock is commonly 6 to 25 feet. Clay material dominates this unconsolidated aquifer system; however, discontinuous sand or gravel deposits are reported. These deposits are commonly 1 to 3 feet thick. Because of low permeability of surface materials, this system is not considered very susceptible to contamination from surface sources. (Maier, 2003)

Bedrock Aquifer System

The Blue River and Sanders Groups occur as the uppermost bedrock aquifer system over most of the west-central portion of Monroe County. Depth to bedrock is generally between 5 and 30 feet. The Blue River and Sanders Groups Aquifer System is not regarded as a major ground-water resource in the county. Static water levels range from 0 feet to 197 feet below land surface but generally between 15 and 75 feet below surface. Areas of shallow bedrock, especially where joints, fractures, and solution features are

present, may allow contamination. These conditions warrant considering the aquifer system as a whole to be susceptible to contaminants introduced at and near land surface. (Maier, 2003)

The City of Bloomington is served by a public water supply. A report pertaining to the adjacent Indiana Gas Company site to the west suggest the groundwater flow direction is to the southeast. (VFC Document #47437557). Based on environmental reports for other nearby sites, local groundwater flow around the Subject Site is to the south-southeast. However, depths of bedrock encountered during the investigation the groundwater at the Subject Site indicate a bedrock slope to the east .

Regional groundwater flow of the area is predominately to the south-southwest in general conformance with surface topography/drainage and the regional attitude of underlying bedrock.

3.1.5 Subject Site Physical Observations

Based on probes advanced on the Subject Site, the soils consist of mostly clays to various depths of 8 – 12 feet bgs. Clays with sandy clay intervals were encountered at depths between 12 – 18 feet. In at least one boring (SP-1) a (more permeable) thin (0.5') layer of clayey sand was encountered above (presumed bedrock) refusal. Bedrock and/or refusal was encountered in all sampling points. Depth to bedrock/refusal was reported between 8.21 ft bgs and 18.76 ft bgs. The bedrock beneath the Subject Site is highly variable in depth between locations. Static water level readings from the temporary groundwater sample points averaged 8.38 feet bgs.

3.2 Laboratory Analysis of Samples

Laboratory analyses were conducted by LSAI Laboratories LLC and PACE Analytical Laboratories of Indianapolis, Indiana. All soil and groundwater samples were stored on ice and/or refrigerated until couriered to the lab. All soil VOC samples were stored on ice immediately after collection and frozen within 24 hours of sampling. Analytical laboratory reports and chain-of-custody documents are included in **Appendix E**.

Not including QA/QC samples, a total of nine (9) soil samples were analyzed for VOCs by EPA SW-846 method 5035A/8260; twelve (12) for SVOCs/PAHs by method 8270/SIM; eleven (11) for 14 metals by method 6010 and 7471. Based upon the initial metals results, six (6) additional samples were analyzed for arsenic (6010).

Not including QA/QC samples, a total of four (4) groundwater samples were analyzed for VOCs by EPA Method 8260, four (4) for SVOCs/PAHs by EPA Method 8270/SIM, and four (4) for 14 metals by methods 6010, 6020, 7470, and three (3) for hexavalent chromium (CrVI) by method 7199. Based on the initial results, one (1) field filtered groundwater sample was analyzed for arsenic (6010) and one (1) field filtered groundwater sample was analyzed for arsenic and lead (6010).

QA/QC samples included both field and laboratory samples. One (1) soil and groundwater field duplicate and MS/MSD samples were collected and analyzed for VOCs, SVOCs/PAHs, 14 metals, and CrVI. Laboratory QA/QC included method blanks, LCS, and internal surrogate standards. For results of QA/QC sampling and analysis see “Data Assessment” in Sections 3.3 and 3.4 below.

3.3 Soil Results

Analytical laboratory reports are included in **Appendix E** and the soil sample analytical results are summarized in **Tables 1 – 4** and on **Figure 3**. Detected analytical concentrations were compared to IDEM’s RCG RSL, ISL, ESL and MTGW soil screening levels (Remediation Closure Guide, Appendix A, Table A-6: 2019 Screening Levels).

VOCs:

One to two soil samples from each of the five (5) probes were selected for analysis for full range VOCs.

Benzene exceeded the RCG MTGW (0.051 mg/kg) in the samples from:

SP-4 (8-9’) (0.819 mg/kg)
SP-4 (9-10.5’) (0.200 mg/kg)
SP-5 (9-11’) (0.100 mg/kg)
SP-5 (9-11’) DUP (0.105 mg/kg)

SP-5 (11-13') (0.177 mg/kg)

Naphthalene exceeded the RCG MTGW (0.11 mg/kg) in the sample from:
SP-4 (8-9') (0.342 mg/kg)

1,2,4-Trimethylbenzene exceeded the RCG MTGW (1.6 mg/kg) in the sample from:
SP-4 (8-9') (12.5 mg/kg)

1,3,5-Trimethylbenzene exceeded the RCG MTGW (1.7 mg/kg) in the sample from:
SP-4 (8-9') (3.59 mg/kg)

PAHs:

Two (2) soil samples from SP-1, SP-2, and SP-3 and three (3) samples from SP-4 and SP-5 were analyzed for PAHs.

Naphthalene exceeded the RCG MTGW (0.11 mg/kg) in the samples from:
SP-1 (3-5') (0.234 mg/kg)
SP-1 (5-7') (0.315 mg/kg)
SP-4 (6-8') (0.221 mg/kg)
SP-4 (8-9') (0.121 mg/kg)
SP-4 (9-10.5') (0.20 mg/kg)
SP-5 (11-13') (0.144 mg/kg)

SVOCs:

Two (2) soil samples from SP-1, SP-2, and SP-3 and three (3) samples from SP-4 and SP-5 were analyzed for SVOCs.

All SVOCs were either below the RCG SLs or were not detected.

Metals:

Two (2) soil samples from SP-1 and SP-2, three (3) from SP-5, and five (5) from SP-3 and SP-4 were analyzed for 14 metals.

Arsenic exceeded the RCG RSL (9.5 mg/kg) in the samples from:
SP-1 (3-5') (12.0 mg/kg)
SP-2 (2-4') (14.2 mg/kg)
SP-3 (2-4') (13.6 mg/kg)
SP-4 (2-4') (18.5 mg/kg)
SP-4 (4-6') (15.1 mg/kg)

Thallium exceeded the RCG RSL (1.1 mg/kg) in the sample from:

SP-1 (3-5') (1.6 mg/kg)

Arsenic exceeded the RCG MTGW SL (5.9 mg/kg) in the samples from:

SP-1 (5-7') (8.2 mg/kg)
SP-3 (0-2') (6.3 mg/kg)
SP-3 (4-6') (8.4 mg/kg)
SP-4 (0-2') (7.7 mg/kg)
SP-4 (6-8') (8.6 mg/kg)
SP-5 (0-2') (6.1 mg/kg)
SP-5 (0-2') DUP (7.5 mg/kg)
SP-5 (2-4') (7.7 mg/kg)
SP-5 (6-8') (6.6 mg/kg)

All other analyzed metals were either below the RCG SLs or were not detected.

Data Assessment:

QA/QC samples collected during the soil sampling included field duplicates, MS/MSD samples and a trip blank. No field equipment blank was collected since only single-use disposable supplies contacted the soil samples. The trip blank was analyzed for VOCs only, while the field duplicates and MS/MSD samples were analyzed for VOCs by method 8260, SVOCs/PAHs by method 8270/SIM, and 14 metals by methods 6010 and 7471. No analytes were detected in the trip blank.

For all but eleven (11) VOCs, fifteen (15) PAHs, and twelve (12) metals both the sample and duplicate were below the detection limit, equating to zero percent (0%) relative percent difference (RPD). For detections in soil field duplicates, the relative percent difference (RPD) ranged from 5% to 139% for 11 VOCs, 36% to 197% for 15 PAHs, and 2% to 162% for 11 metals. Of the duplicate detections, six (6) VOCs and seven (7) metals detections were greater than five times the reporting limit (>5 x RL); including seven (7) detections that had a field duplicate RPD greater than the notice limit of 50% for soil. Thus, 46% of the analyte detections >5 x RL were below the notice limit which does not meets the EPA DQO of at 75%. Thus, the non-homogeneity commonly observed in soil samples affects this sample set.

The MS/MSD sample results were generally within control limits. Some metals analytes were outside control limits due to elevated sample concentrations relative to spike levels or due to sample non-homogeneity common in soil samples. Naphthalene in the VOC range had low recovery suggesting low bias of the sample results. Naphthalene in the PAHs range analysis were higher than the VOC range and should be taken as more reliable. Where outside control limits parameters were confirmed by other QA/QC measures or were for analytes that were not detected or were far below the screening levels. Low antimony recovery suggests that antimony results should be considered

estimated and may be biased low. Laboratory QA/QC samples (method blanks, LCS and surrogate spikes) were within control limits or confirmed by other QA/QC measures.

A Level III QA/QC data package is included with the lab report in **Appendix E**.

3.4 Groundwater Results

Groundwater sample analytical results are summarized in **Tables 5 – 8** and on **Figure 4**. Detected analytical concentrations were compared to IDEM's RCG Residential Groundwater Screening Levels (Remediation Closure Guide, Appendix A, Table A-6: 2019 Screening Levels).

VOCs:

Groundwater samples obtained from four (4) probe locations were analyzed for full range VOCs.

Benzene exceeded the RCG VIGWSL ISL (120 ug/L) in the sample from:
SP-4 (183 ug/L)

Benzene exceeded the RCG VIGWSL RSL (28 ug/L) in the samples from:
SP-5 (34.0 ug/L)
SP-5 DUP (36.1 ug/L)

1-Methylnaphthalene exceeded the RCG RSL (11 ug/L) in the sample from:
SP-4 (12.4 ug/L)

Naphthalene exceeded the RCG RSL (1.7 ug/L) in the sample from:
SP-4 (9.4 ug/L)

No other VOCs were detected above the RCG SLs in the groundwater samples.

PAHs:

Groundwater samples obtained from four (4) probe locations were analyzed for PAHs.

Naphthalene exceeded the RCG RSL (1.7 ug/L) in the sample from:
SP-4 (8.0 ug/L)

No other PAHs were detected above the RCG SLs in any of the groundwater samples.

SVOCs:

Groundwater samples obtained from four (4) probe locations were analyzed for SVOCs.

No SVOCs were detected in any of the groundwater samples.

Metals:

Groundwater samples from four (4) probe locations were analyzed for 14 metals while three (3) probe locations were analyzed for CrVI.

Arsenic exceeded the RCG RGSL (10.0 ug/L) in the samples from:

SP-4 (14.9 ug/L)
SP-5 (12.4 ug/L)
SP-5 DUP (12.1 ug/L)

The field filtered samples from SP-4 and SP-5 was analyzed for arsenic by method 6010. Arsenic was below the RCG RSL in the field filtered sample from SP-4. Arsenic exceeded the RCG RGSL (10.0 ug/L) in the sample from:

SP-5 Field Filtered (10.2 ug/L)

Lead exceeded the RCG RGSL (15.0 ug/L) in the samples from:

SP-3 (33.2 ug/L)
SP-4 (26.4 ug/L)

The field filtered sample from SP-4 was analyzed for lead by method 6010. Due to poor recharge in SP-3, no field filtered sample was obtained for analysis. Lead was below the RCG RSL in the field filtered sample from SP-4.

All other metals were either below the RCG RSLs or were not detected.

Data Assessment:

QA/QC samples collected during groundwater sampling included field duplicates, MS/MSD samples, equipment blanks and a trip blank. The field duplicate, MS/MSD and equipment blanks were analyzed for VOCs by EPA method 8260, SVOCs/PAHs by method 8270/SIM, 14 metals by method 6010, 6020 or 7470, and CrVI by method 7199. The trip blank was analyzed for VOCs only. No VOCs were detected in the trip blank and equipment blank. Trace levels of CrVI were detected in the equipment blank but were below the RCG screening level. Also, naphthalene and zinc were detected in the equipment blank far below the RSL and were flagged by the laboratory as “J-flag”; meaning the estimated concentration is above the adjusted method detection limit and below the adjusted reporting limit.

For all but four (4) VOCs, four (4) PAHs, and seven (7) metals analytes were below detection limits in both the sample and the field duplicate, equating to a zero percent relative difference (0% RPD). For the groundwater duplicate detections, the RPD varied from 1.6% to 7.8% for VOCs, 21% to 122% for PAHs, and 0.2% to 22% for metals. Of the duplicate detections, two (2) VOCs (benzene and isopropyl benzene), two (2) PAHs (1-Methylnaphthalene and 2-Methylnaphthalene), and two (2) metals (barium and nickel) were greater than five times the reporting limit (>5 x RL). Of the six (6) detections >5 x RL, the field duplicate did not have an RPD greater than the notice level of 35%. Thus, 100% of the analyte detections >5 x RL were below the notice limit which meets the DQO

of 75%. Therefore, no indication of non-homogeneity in the groundwater samples was observed.

The overall precision of the sample set may also be evaluated by determining the average RPD of all duplicates with detections >5 x RL. The average RPD of the analyte detections >5 x RL is 11%. These data indicate good precision for the groundwater analyses.

The groundwater MS/MSD sample results were generally within control limits. Where out of control limits, parameters were confirmed by other QA/QC measures and were for parameters not detected in the samples, or if detected, were far below the RCG SLs. Laboratory QA/QC included method blanks, LCS, and surrogate spikes. Laboratory QA/QC results were within control limits.

A Level III QA/QC data package is included with the lab report in **Appendix E**.

4.0 DISCUSSION and CONCLUSIONS

Soil and groundwater sampling for this Phase II ESA was conducted on May 16 and 17, 2019 for the purpose of determining subsurface conditions throughout of the Subject Site. The subsurface investigation included advancing five (5) soil and groundwater probes on the Subject Site at locations that were the most likely to be impacted by the RECs identified in the 2019 Phase I ESA. Soil samples were collected from each boring location, and groundwater was sampled from four (4) probe locations. Soil samples from the probes were analyzed for VOCs, SVOCs/PAHs and 14 Metals. Groundwater samples from the probes were analyzed for VOCs, SVOCs/PAHs, 14 Metals and CrVI.

Laboratory analyses of the submitted samples confirm that the Subject Site soils and groundwater have been impacted by on-site sources. No analytes were found above IDEM RCG SLs except those discussed below.

Soil VOCs – Soil Migration to Groundwater

Soil results show low levels of petroleum constituents (benzene, naphthalene, 1,2,4-Trimethylbenzene, and 1,3,5-Trimethylbenzene) above RCG Soil MTGW in the smear zones at SB-4 (8-10.5') and at SB-5 (9-13'). The highest concentrations of petroleum constituents were detected in areas the 2019 Phase I ESA indicated as likely former petroleum UST pits. This suggests the source is likely from on-site historical uses of the property.

Soil PAHs

Naphthalene exceeds RCG Soil MTGW in shallow samples from SP-1 (3-5') and SP-1 (5-7'). Due to the historical nature of the Subject Site and the shallow depths of these contaminants, the source is likely from on-site historical usage of the property. Naphthalene exceeds RCG Soil MTGW in samples from SP-4 (6-10.5') and SP-5 (11-13'). Due to these sample points being in close proximity to likely former petroleum UST pit areas, the source of contamination is likely on-site and from historical uses of the property.

Soil Metals

Arsenic exceeds the RCG RSL in the shallower sample intervals at SP-1, SP-2, SP-3, and SP-4. Arsenic exceeds the RCG Soil MTGW in SP-1 (5-7'), SP-3 (0-2'), SP-3 (4-6'), SP-4 (0-2'), SP-4 (6-8'), SP-5 (0-2'), SP-5 (0-2') DUP, SP-5 (2-4'), and SP-5 (6-8'). However, the average arsenic concentrations of all 18 soil samples (8.6 mg/kg) and the average of all nine (9) shallow (0-2' and 2-4') soil samples (9.46 mg/kg) are both less than the RCG RSL (9.5 mg/kg) but do exceed the RCG MTGW SL (5.9 mg/kg). Levels of arsenic decreased in deeper samples at SP-3 and SP-4 indicating that arsenic present at shallower depth may not be migrating into deeper soils.

Thallium exceeded the RCG RSL (1.1 mg/kg) in one sample at SP-1 (3-5') at 1.6 mg/kg. This may from historical use of the property and the fill material that was observed in this section of the subsurface. However, that average of all 10 soil samples to a depth of five (5) feet is 0.79 mg/kg which is well below the RSL.

Levels of arsenic up to 9.5 mg/kg (or more) are commonly due to background (USGS 1984), while higher concentrations detected may be due to urban fill or historical activities. Elevated levels of thallium may be due to urban fill or historical site activities. Almost all of the Subject Site is either paved with asphalt/concrete or covered by a building, preventing direct contact and minimizing rainwater infiltration.

Groundwater VOCs

VOCs were found to exceed RGSLs in groundwater samples collected from the Subject Site.

Specifically:

- Benzene exceeded the RCG VIGWSL ISL in the sample from SP-4.
- Benzene exceeded the RCG VIGWSL RSL in the samples from SP-5 and SP-5 Dup.
- 1-Methylnaphthalene and Naphthalene exceeded the RCG RSL in the sample from SP-4.

Benzene, 1-Methylnaphthalene, and Naphthalene are all common petroleum constituents. As mentioned previously and in the 2019 Phase I ESA there was a historical on-site filling station with likely USTs. For this reason, the source is likely from historical on-site sources. The extent of this contamination is unknown.

Groundwater PAHs

Naphthalene exceeded the RCG RSL in one groundwater sample from SP-4. Other PAHs were detected mostly in SP-4 and SP-5 samples, but none exceeded the RCG RSLs.

Groundwater Metals

Arsenic was found above the RGSL in the unfiltered samples collected from SP-4, SP-5, and SP-5 DUP. The filtered sample for SP-5 exceeded the RCG RSL for arsenic. Sediment in the groundwater samples, even the filtered sample of SP-5, may have caused the elevated levels of arsenic. However, given the presence in shallow soil, it cannot be ruled out that the arsenic in SP-5 could be leaching from the soil and dissolving into the groundwater.

Lead exceeded the RCG RSL in the samples from SP-3 and SP-4. The sample from SP-4 had some level of sediment and the filtered sample was below the detection limits for lead. It is likely that the elevated lead in SP-4 is due to suspended sediments in the

groundwater and very little or none is likely to be dissolved in the groundwater. No filtered sample was collected from SP-3 due to poor recharge; however, it is likely that the elevated lead is from suspended sediments in the groundwater and very little or none is likely to be dissolved in the groundwater.

Conclusions:

Based on the discussion above, BCA draws the following conclusions:

Groundwater at the Subject Site has been impacted by petroleum constituents, likely from historical on-site activities/source(s), specifically the former filling station(s). The groundwater probes, SP-4 and SP-5, located on the northeastern section of the Subject Site were most effected. It is unknown if any petroleum constituents have migrated off the Subject Site.

There does not appear to be a potential for vapor migration exposure for the Subject Site or within the surrounding area from the locations sampled. Groundwater was encountered in the temporary wells from 7.46 – 8.95 feet bgs and the samples that exceed the residential and commercial VIGWSL are covered by an asphalt parking lot and at distance from occupied structures. However, the extent of impacts have not been delineated.

Soil arsenic is above the MTGW and RSL and thallium is above the RSL. However, the averages for arsenic and thallium in the shallow soil and for all soil are below the RSLs and are likely mostly due to background. Almost all of the Subject Site is either paved with asphalt/concrete or covered by a building, preventing direct contact and minimizing rainwater infiltration. There is some potential that some of the metals impacts are from urban fill. Groundwater detections arsenic and lead above the RGSLs are likely due to sediment. However, the possibility cannot be completely ruled out that impacts were present and due to migration of arsenic from shallow soils.

5.0 RECOMMENDATIONS

Based on the results of this Phase II ESA conducted at the Subject Site located at 216 South College Avenue in Bloomington, Indiana, BCA recommends:

- Further Investigation of the petroleum constituents on-site and off-site.
- Restrict future land-use through an Environmental Restrictive Covenant (ERC) or another tool to eliminate potential exposure pathways to impacted soil and groundwater.

Notes:
Samples analyzed using EPA SW-846 Method 8270 and 8270 SIM
mg/kg = milligrams per kilogram
ppm - parts per million
PAHs - Polynuclear Aromatic Hydrocarbons
SVOCs = Semi-volatile organic compounds
BDL - Below Detection Limits
<SL - Below RCG Screening Levels
Blank cells = Not Analyzed
--- No value given in the Remediation Closure Guide
* Remediation Closure Guide, Appendix A, Table A-6: Screening Level Summary Table - 2019
**RPD = relative percent difference =ABS((X-Y)/((X+Y)/2)) --- if both values are below Reporting Limit, then the RPD is considered 0%

Notes:
Samples analyzed using EPA SW-846 Method 8270 and 8270 SIM
mg/kg = milligrams per kilogram
ppm - parts per million
PAHs - Polynuclear Aromatic Hydrocarbons
SVOCs = Semi-volatile organic compounds
BDL - Below Detection Limits
--- No value given in the Remediation Closure Guide
* Remediation Closure Guide, Appendix A, Table A-6: Screening Level Summary Table - 2019
**RPD = relative percent difference =ABS((X-Y)/((X+Y)/2)) --- if both values are below Reporting Limit, then the RPD is considered 0%

Sampling and Analysis Plan and Health and Safety Plan

Phase II
Commercial Building
216 S College Avenue
Bloomington, IN

SAMPLING AND ANALYSIS PLAN
PHASE II ENVIRONMENTAL SITE ASSESSMENT

Commercial Building
216 S. College Avenue
Bloomington, Indiana 47404
Cooperative Agreement # BF - 00E02280 – 0
BCA Project No. 8131/19-146
May 13, 2019

1.0 BACKGROUND AND PURPOSE

The Subject Site is a commercial office building property located at 216 S. College Avenue in Bloomington, Indiana. The current building occupants include the Campus Costume Store (retail) and Hilliard Lyons (wealth advisors). The Subject Site is comprised of three (3) parcels of land identified by two (2) parcel numbers (# 53-05-33-310-240.000-005 and # 53-05-33-310-243.000-005) totaling approximately 1.7 acres of land that is situated in the City of Bloomington, Monroe County, Indiana. The Site is located on the south side of West 4th Street, on the north side of West 3rd Street and on the west side of South College Avenue. The surrounding area is a mix of commercial and municipal properties. The B-Line multi-use trail runs along the western property boundary. The large parcel (with the commercial building) on Subject Site is currently owned by Rbowa LLC. The two (2) small parcels located near the northeast portion of the Subject Site is owned by Thomas Sicks & Nancy Held. The City of Bloomington is in the process of acquiring the Subject Site for redevelopment purposes.

A Phase I Environmental Site Assessment (ESA) of the Subject Site was conducted for the City of Bloomington by BCA Environmental Consultants, LLC (BCA). The Phase I ESA was funded through an U.S. EPA Brownfield Assessment Grant to the City of Bloomington (Cooperative Agreement BF- 00E02280). The Phase I ESA identified the following recognized environmental conditions (RECs):

Onsite:

- Two (2) former gas stations in the northeast quadrant of the Subject Site;
- A trench drain with an apparent oil-water separator (or grease trap) located just outside the northwest corner of the onsite building;
- Historical rail spur and coal piles along the western border of the property (mostly beneath the current building).

Offsite:

- Former manufactured gas plant (MGP) across the B-Line trail to the west of the Subject Site;
- Former LUST site (currently the Wonderlab museum) diagonally to the northwest of the Subject Site;
- Possible TCE plume that was identified on the 304 Kirkwood property (the Foundry, located approximately 440 feet north-northwest) and may run south to approximately ½ block west of the Subject Site.

The purpose of the Phase II ESA is to implement the recommendations of the Phase I ESA and investigate areas of potential environmental impact to confirm the presence or absence of contaminants. The scope of work proposed herein would not be sufficient to determine the extent and magnitude of contamination, if it is present.

2.0 SCOPE OF WORK

The investigation procedures will follow BCA's Bloomington Quality Assurance Project Plan and Field Standard Operating Procedures (QAPP and Field SOP) and those recommended by the IDEM 2012 Remediation Closure Guide (RCG), regulations and industry-accepted practices. Investigation results will be compared to RCG residential closure levels (RCLs) and industrial closure levels (ICLs) from the RCG Appendix A, Table A-6: 2019 Screening Levels.

2.1 Phase II Environmental Site Assessment

The potential environmental concerns identified in the Phase I are included in section 1.0 above.

Soil and groundwater samples will be analyzed for volatile organic compounds (VOCs), semi-volatile organic compounds/polynuclear aromatic hydrocarbons (SVOCs/PAHs), hexavalent chromium (CrVI) and 14 metals.

2.1.1 Geophysical Survey

A limited geophysical survey will be conducted at the site in an attempt to identify the locations of the former USTs and any unknown and buried utilities. The survey will consist of ground penetrating radar (GPR) scans of the area around the proposed borings to identify any potential buried utility or other sub-surface anomaly, and to determine the presence or absence of the former UST associated with the Subject Site. Any linear anomalies will be marked and mapped as possible utility locations.

2.1.2 Soil/Groundwater Boring Investigation

Boring and sample logs from other sub-surface investigations in the area (CTP Parking lot & the Showers) indicate bedrock has been encountered at depths ranging from 8 to 13 feet below ground surface (bgs), sometimes with a thin saturated layer above the bedrock. A total of five (5) soil probes will be driven throughout the Subject Site: all to refusal, 5 feet past first groundwater or 25 feet bgs, whichever is shallower. The probes will be placed on the site as indicated on the attached site map (**Figure 1**) with adjustments based on site conditions, utility locations, and observations made by BCA personnel upon arrival at the site.

Probe SP-1 will be located in the northwest portion of the Subject Site near the

suspected oil/water separator. This probe will also evaluate potential impacts from the former rail spur in that area, as well as potential impacts from off-site contaminant sources upgradient to the west, northwest, and north.

Probe SP-2 will be located in the southwest portion of the Subject Site in the suspected historical coal storage area. This probe will also evaluate potential impacts from off-site contaminant sources upgradient to the west and northwest, particularly the former MGP site adjoining to the west of the Subject Site.

Probe SP-3 will be located in the southeast portion of the Subject Site to evaluate potential impacts from the former battery service stations and vulcanizing operations in the central portion of the property, as well as to evaluate potential impacts from off-site contaminant sources cross-gradient to the east.

Two (2) probes (SP-4 and SP-5) will be located near the suspected former USTs or UST pit(s) as identified by a GPR survey and historical maps, to assess soil and groundwater conditions around or near the former USTs. Soil and groundwater samples will be collected from each designated boring and analyzed as indicated below.

Soil samples will be collected continuously throughout the depth of each of the probes. The soil samples will be field screened as described below, and two (2) soil samples from each probe will be analyzed for VOCs, SVOCs/PAHs, and 14 metals. Specifically, soil samples for VOC analysis will be collected from an interval where field screening suggests the presence of volatiles and at bottom interval or from the vadose (smear) zone of the probes.

Deeper soil samples (2-4, 4-6, 6-8 feet bgs etc.) from each probe will also be collected and retained for potential follow-up analysis for metals. Up to five (5) soil samples may be analyzed for up to four (4) four metals each, to determine the depth of impact or whether contaminants are migrating from shallow soils. The three (3) soil samples with the highest total chromium concentrations will be analyzed for CrVI by EPA Method 7199.

If soil screening does not suggest the presence of contamination, then the first soil sample interval from the surface and the interval at or below the tank bottoms (about 6 to 10’ bgs) in each probe (as applicable) will be selected for analysis for VOCs, SVOCs/PAHs and metals as indicated for probes SB-4 to SB-5.

Groundwater will be sampled from each of the probes where measurable amounts of groundwater is encountered, using temporary 1" PVC sampling points with 5' of screen and micro-purge (low-flow) sampling techniques as described below. Groundwater samples from each of the probes will be analyzed for VOCs, SVOCs/PAHs, and 14 metals. Filtered groundwater samples will be collected from each location and up to five (5) filtered samples will be analyzed for up to four (4) metals that exceed the groundwater screening levels in the unfiltered samples. Filtered groundwater samples also will be collected and held for follow-up analysis of up to five (5) samples for CrVI via EPA method 7199.

2.2 Field Methods

The approved Field Standard Operating Procedures for the project will be used for all tasks. The placement of probes will be as indicated in the attached site map (**Figure 1**).

Probes will be advanced by means of direct push probing. Probes will be advanced continuously by utilizing 4- or 5-foot long macro-bore rods equipped with an acetate inner liner. Soil cores will be screened in the field with a photo-ionization detector (PID) and logged in accordance with the Unified Soil Classification System (USCS). Field evidence of contamination (PID, olfactory or visible staining) will be noted. Soil samples will be selected for laboratory analysis based on the field screening results, position in the soil column or other evidence of contamination. Soil samples for VOC analysis will be collected using EPA method 5035A with Terracore™ samplers and 40 mL VOA bottles containing distilled water and methanol preservative and will be frozen within 48 hours of collection.

Locally, shallow groundwater likely flows with the surface contour to the south-southeast toward a nearby buried stream channel. It is anticipated that a thin saturated zone will be encountered above bedrock which is anticipated at 8 to 13 ft. bgs. If groundwater is not initially apparent, the boring will be allowed to sit overnight and will be checked again to determine if groundwater has accumulated. Groundwater samples will be collected by use of temporary 1" PVC sampling points with 5' screens, placed in selected boreholes. Groundwater will be purged and sampled following the IDEM Micro-Purge (Low-Flow) Sampling Option (reformatted June 6, 2012) to the extent possible. Field parameters (Temperature, Conductivity, Dissolved Oxygen, pH, and Oxygen Reduction Potential) will be monitored in each temporary sampling point during purging until at least three (3) parameters have stabilized. Micro-Purge sampling will be conducted with a non-contact stainless steel submersible bladder pump. If groundwater

monitoring parameters cannot be stabilized, a sample will be collected regardless, and a note will be recorded in the field book. If filtered samples are to be analyzed (see above) they will be collected by passing the groundwater through an in-line 10-micron (um) cartridge filter. Groundwater samples to be analyzed for CrVI will be collected in approved laboratory-provided EPA method 7199 kits.

If groundwater flow parameters will not support Low Flow sampling (slow recharge rate, low water levels, etc.), Low Flow will be suspended, and other methods (peristaltic pump or bailer) will be utilized to collect a sample after the probe is purged dry several times and allowed to recover for sufficient sample volume to be collected.

All probe locations will be located by means of a mapping grade (3-meter accuracy, Post Processed) GPS device.

Soil cuttings and purge water from groundwater sampling will be drummed and held on-site. Following laboratory testing, the drum(s) will be transported for disposal, if appropriate. Cost projections are based on disposal of two (2) 55-gallon drums.

For further information on field methods see the Field Standard Operating Procedures, notably Sections 1.2 Soil Sampling and 1.3 Groundwater Sampling.

2.3 Laboratory Methods

An analysis summary is provided in **Table 1**. The analytes and methods utilized for this project include:

VOCs = volatile organic compounds. Analysis by EPA Method 8260.

SVOCs/PAHs = Semi-volatile organic Compounds & polynuclear aromatic hydrocarbons. Analysis by EPA Method 8270SIM.

14 Metals = antimony, arsenic, barium, beryllium, cadmium, chromium, copper, lead, mercury, nickel, selenium, silver, thallium, and zinc. Analysis by EPA Method 6010B, 7470, 7471.

4 Metals = Field Filtered – Follow-up analysis. Metals to be determined.

CrVI = hexavalent chromium (low level soil). Analysis by EPA Method SW-846/7199A.

CrVI = hexavalent chromium (low level water). Analysis by EPA Method SW-846/7199.

2.4 Quality Control

Quality control samples are collected and analyzed to assess the quality of the data resulting from the field sampling program. Quality control samples and laboratory reports will meet the requirements of the IDEM guidance. Equipment blanks will be collected for this project if groundwater samples are collected with non-disposable equipment and will include one (1) for each day of groundwater sampling. Two (2) trip blanks (one (1) for soil and one (1) for water) will be submitted for the project (for VOCs only). Field duplicate samples of each matrix are collected at the rate of one (1) per 20 investigative samples for each analytical method. Matrix spikes and matrix spike duplicates (MS/MSD) are collected at a rate of one (1) per 20 investigative samples per sample matrix for each analytical method. For this project, one (1) equipment blank for the groundwater sampling equipment, one (1) duplicate sample, and one (1) MS/MSD sample for each analytical method will be collected for groundwater; and one (1) duplicate sample and one (1) MS/MSD sample for each analytical method will be collected for soil. The laboratory will include a DQO Level III report package.

2.5 Decontamination

Sampling equipment utilized at the site will be decontaminated using a non-phosphate detergent wash and tap water rinse prior to and following the collection of each sample to reduce the potential for cross contamination. All other procedures used to decontaminate equipment will be documented. Where ever practical, disposable sampling equipment will be used to eliminate the need for decontamination.

2.6 Report

Observations and data generated by the field investigation will be summarized in a bound report for submittal to the Client. The report will contain a detailed explanation and documentation of sample locations and collection procedures. The analytical data will be summarized, and conclusions discussed to the extent possible. The need for additional investigation or remediation of the parcel will also be discussed, if appropriate.

3.0 COST

The cost of providing these Phase II ESA services will be $32,328 which will be invoiced monthly on a percent complete basis. The cost of providing these services is based on the fee schedule and direct expense rates established in the executed contract between BCA and the City of Bloomington. Any modifications to the scope of this SAP will be invoiced per the contract terms following approval by the EPA and the City.

SITE HEALTH AND SAFETY PLAN

Commercial Building, 216 S. College St., Bloomington, Indiana

1.0 GENERAL PROJECT INFORMATION

Prime Contractor:	**BCA Environmental Consultants, LLC**
Client:	**City of Bloomington**
Subject Site Name:	**Commercial Building**
Site Address:	**216 S. College, Bloomington, IN**
Principal: **Project Manager:**	**John Kilmer** **Jacob Teuschler**
Date of Plan:	**May 14, 2019**

SITE DESCRIPTION

Type of Facility (describe):	**Commercial Building**
Active or Closed/Abandoned:	**Active**
Describe surface features (buildings, paved or unpaved, overhead/underground utilities):	**3 parcels, 1.7 acres, w/ one (1) building, paved lot, overhead utilities**
List any site access restrictions:	**None**
Surrounding neighborhood description:	**Commercial / Municipal**

SITE ACTIVITIES - The site activities covered by this HASP include those checked in the box below:

Site Activity	Soil Borings	Groundwater Probe Installation	Soil / Purge Water Disposal	Soil Excavation	Soil Sampling
Assessment					
Investigation	**X**	**X**	**X**		**X**
Remediation

2.0. INTRODUCTION/SCOPE OF WORK

This plan provides health and safety guidelines for site investigation and remediation activities conducted by BCA Environmental Consultants, LLC (BCA) to protect on-site personnel, visitors and the public from physical harm and exposure to hazardous materials and/or wastes. The procedures and guidelines contained herein are based on the best available information at the time of the plan's preparation. Specific requirements may be revised if new information is received, or site conditions change. It is the responsibility of the field personnel to evaluate the site work conditions and if in doubt about safety or an operation, request assistance from the Site Safety Officer. Compliance with this plan is mandatory for all on-site BCA personnel and subcontractors.

Operations at the site may require additional tasks not identified in the preparation of this health and safety plan (HASP). Before performing any task not covered in this HASP a revision must be prepared and approved by the Site Safety Officer (SSO).

2.1 Scope of Work

Scope of work for the investigation at the site includes:

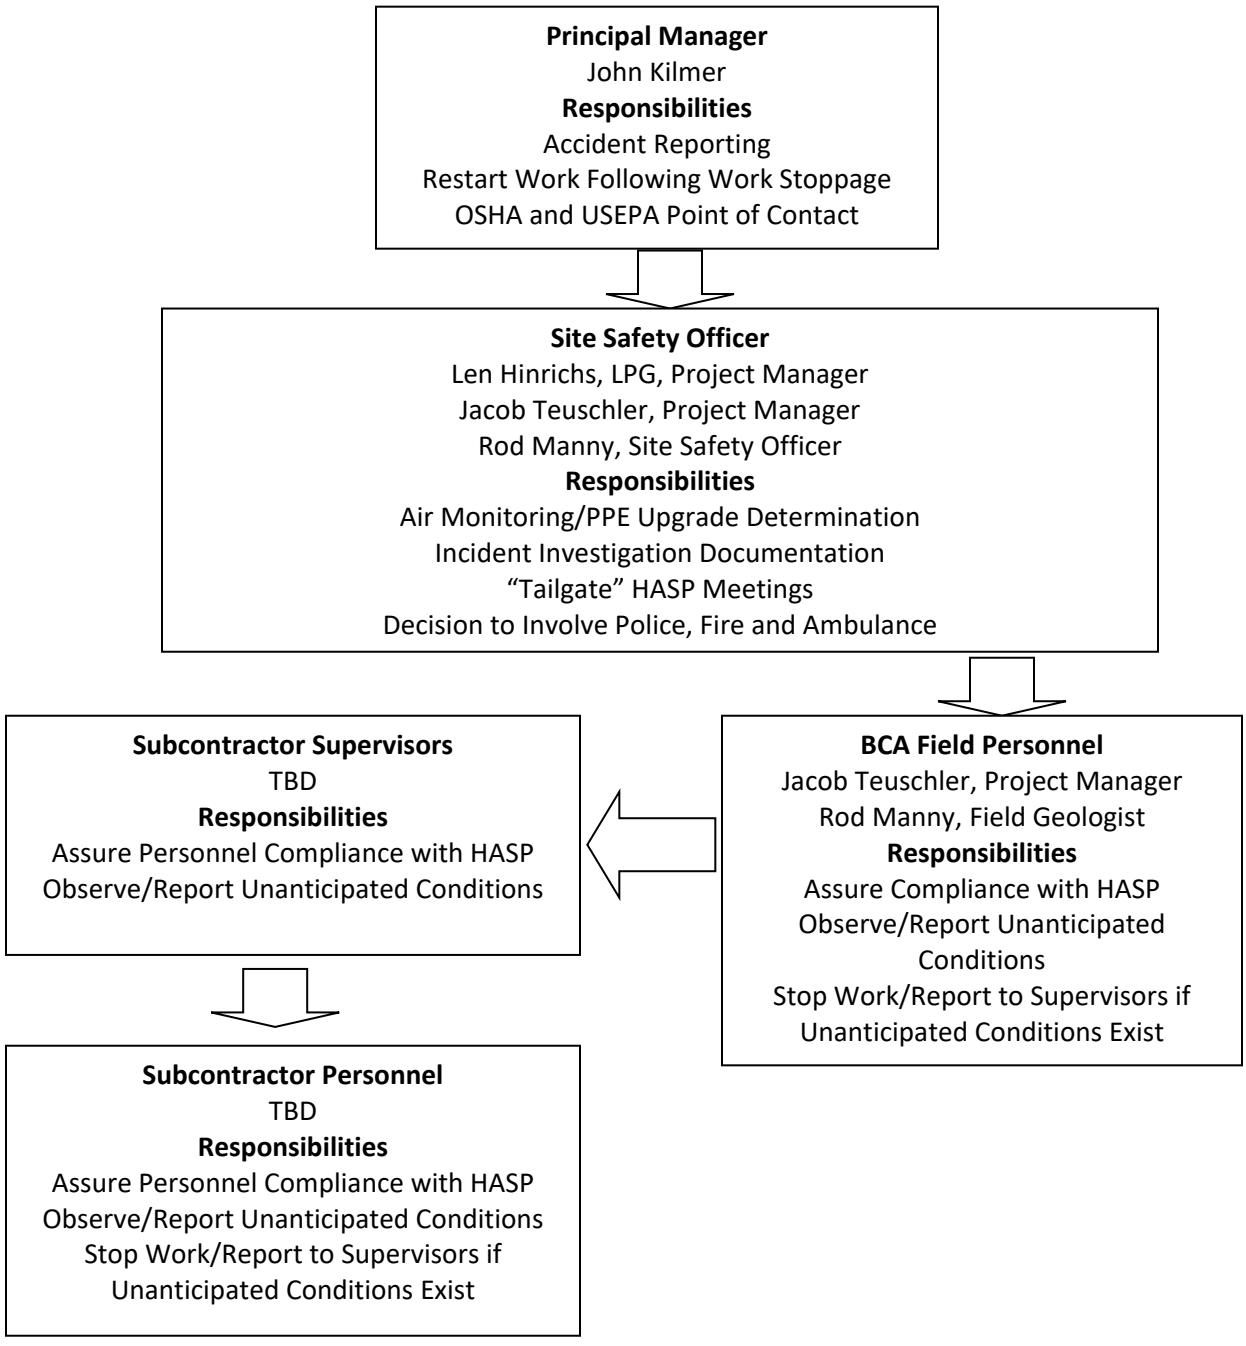
- Utility locate
- Geophysical Survey
- Install soil/groundwater probes
- Sample soil
- Sample groundwater

3.0 PERSONNEL CONTACT INFORMATION AND PHONE NUMBERS

The BCA SSO will have the authority to alter work practices, stop work, and/or allocate resources to mitigate unsafe work practices. All personnel have the authority to stop any work practice that may endanger site personnel or the general public. Restarting work will be done in consultation with the SSO. The following personnel and subcontractor resources will be used on this site:

POSITION	NAME	CONTACT
Safety Officer	**Jacob Teuschler**	**© (765) 686-2414**
Field Manager	**Jacob Teuschler**	**© (765) 427-0471**
Field Technician	**Rod Manny**	**© (765) 686-2414**
Excavation Services	**To be determined**	**To be determined**
Remediation Services	**To be determined**	**To be determined**
Subcontractors: List all names of subcontractors to be used for site activities	**To be determined**	**To be determined**

TABLE OF AUTHORITY



4.0 EMERGENCY INFORMATION/RESPONSE

The purpose of this section is to provide the on-site user with contact and location information to be used in case of an emergency response situation. In case of an emergency on-site, **CALL 911** first and **NOTIFY** the site operator (if available). Then contact the BCA project manager and Site Safety Officer for this site.

EMERGENCY PHONE NUMBERS

Hospital Name	**IU Health Bloomington Hospital**
Hospital Address	**601 W 2nd Street, Bloomington**

5.0 STANDARD EMERGENCY PROCEDURES

5.1 Hazard Communication

Any organization wishing to bring any hazardous material onto any BCA-controlled work site must first provide a copy of the item's Material Safety Data Sheet (MSDS) to the Site Safety Officer for approval and filing (the Site Safety Officer will maintain copies of all MSDSs on site). MSDSs may not be available for locally-obtained products, in which case some alternate form of product hazard documentation will be acceptable. All personnel shall be briefed on the hazards of any chemical product they use and shall be aware of and have access to all MSDSs. All containers on site shall be properly labeled to indicate their contents. Labeling on any containers not intended for single-day, individual use shall contain additional information indicating potential health and safety hazards (flammability, reactivity, etc.).

The Hazard Communication standard (29 CFR 1910.1200) has been provided to employees, and a written copy is on file at BCA's office.

5.2 Confined Space Entry

There is no expectation that a confined space will be entered during this project.

6.0. PERSONNEL TRAINING RECORDS

All personnel working within the exclusion zone are required to have 40-hour HAZWOPPER training and be current with refresher training in accordance with 29CFR 1910.120.

7.0 KNOWN OR ANTICIPATED HAZARDS

7.1 General Safety Rules

Housekeeping

During site activities, work areas will be continuously policed for identification of excess trash and unnecessary debris. Excess debris and trash will be collected and stored in an appropriate container (e.g., plastic trash bags, garbage can, roll-off bin) prior to disposal. At no time will debris or trash be intermingled with waste PPE or contaminated materials.

Smoking, Eating, or Drinking

Smoking, eating and drinking will not be permitted inside any controlled work area at any time. Field workers will first wash hands and face immediately after leaving controlled work areas (and always prior to eating or drinking). Consumption of alcoholic beverages is prohibited at any BCA-controlled site.

Personal Hygiene

The following personal hygiene requirements will be observed:

Water Supply: A water supply adhering to the following requirements will be utilized:

- An adequate supply of potable water will be available for field personnel consumption.
- Potable water can be provided in the form of water bottles, canteens, water coolers, or drinking fountains. Where drinking fountains are not available, individual-use cups will be provided as well as adequate disposal containers. Potable water containers will be properly identified in order to distinguish them from non-potable water sources.
- Non-potable water may be used for hand washing and cleaning activities. Nonpotable water will not be used for drinking purposes. All containers of non-potable water will be marked with a label stating:

Non-Potable Water
Not Intended for Drinking Water Consumption

Toilet Facilities:

- A minimum of one toilet will be provided for every 20 personnel on site, with separate toilets maintained for each sex except where there are less than 5 total personnel on site. For mobile crews where work activities and locations permit transportation to nearby toilet facilities on-site facilities are not required.

Washing Facilities:

- Employees will be provided washing facilities (e.g., buckets with water and Alconox) at each work location. The use of water and hand soap (or similar substance) will required by all employees following exit from the Exclusion Zone, prior to breaks, and at the end of daily work activities.

Buddy System

All field personnel will use the buddy system when working within any controlled work area. Personnel belonging to another organization on site can serve as "buddies" for BCA personnel. Under no circumstances will any employee be present alone in a controlled work area.

7.2 Heat and Cold Stress

Heat and cold stress may vary based upon work activities, PPE/clothing selection, geographical locations, and weather conditions. To reduce the potential of developing heat/cold stress, be aware of the signs and symptoms of heat/cold stress and watch fellow employees for signs of heat/cold stress.

Heat stress can be a significant field site hazard, particularly for non-acclimated personnel operating in a hot, humid environment. Site personnel will be instructed in the identification of a heat stress victim, the first-aid treatment procedures for the victim and the prevention of heat stress casualties. Work-rest cycles will be determined, and the appropriate measures taken to prevent heat stress.

7.3 Responding to Heat-Related Illness

The guidance below will be used in identifying and treating heat-related illness.

Heat- Related Illness	Description	First Aid
Mild Heat Strain	The mildest form of heat-related illness. Victims exhibit irritability, lethargy, and significant sweating. The victim may complain of headache or nausea. This is the initial stage of overheating, and prompt action at this point may prevent more severe heat-related illness from occurring.	• Provide the victim with a work break during which he/she may relax, remove any excess protective clothing, and drink cool fluids. • If an air-conditioned spot is available, this is an ideal break location. • Once the victim shows improvement, he/she may resume working; however, the work pace should be moderated to prevent recurrence of the symptoms.
Heat Exhaustion	Usually begins with muscular weakness and cramping, dizziness, staggering gait, and nausea. The victim will have pale, clammy moist skin and may perspire profusely. The pulse is weak and fast and the victim may faint unless they lie down. The bowels may move Involuntarily.	• Immediately remove the victim from the work area to a shady or cool area with good air circulation (avoid drafts or sudden chilling). • Remove all protective outerwear. • Call a physician. • Treat the victim for shock. (Make the victim lie down, raise his or her feet 6–12 inches, and keep him or her cool by loosening all clothing).
Heat Stroke	The most serious of heat illness, heat stroke represents the collapse of the body's cooling mechanisms. As a result, body temperature may rise to 104 degrees Fahrenheit or higher. As the victim progresses toward heat stroke, symptoms such as headache, dizziness, nausea can be noted, and the skin is observed to be dry, red, and hot. Sudden collapse and loss of consciousness follows quickly and death is imminent if exposure continues. Heat stroke can occur suddenly	• Immediately evacuate the victim to a cool and shady area. • Remove all protective outerwear and as much personal clothing as decency permits. • Lay the victim on his or her back with the feet slightly elevated. • Apply cold wet towels or ice bags to the head, armpits, and thighs. • Sponge off the bare skin with cool water or rubbing alcohol, if available. • The main objective is to cool without chilling the victim. • Give no stimulants or hot drinks. • Since heat stroke is a severe medical condition requiring professional medical attention, emergency medical help should be summoned immediately to provide onsite treatment of the victim and proper transport to a medical facility.

8.0 PHYSICAL HAZARDS AND MITIGATION PROCEDURES

Safe work practices in compliance with OSHA standards and this document will be used at all times. The first aid kit and fire extinguisher are to be on site at all times. The following table lists the anticipated hazards and the associated safety rules for proper control.

Hazard Description	Potential Result	Control Measure
Tool Handling	Cuts, contusions, bruises	Wear gloves, steel-toed boots and safety glasses
Vehicle Traffic	Impact, getting struck by vehicle	Set up safety cones around well being sampled. Communicate activities with any onsite personnel. Wear reflective vest. Use truck or van as a shield if possible. Set up snow fence for each location where pedestrian walkways are affected and cover all openings or secure with snow fence during all breaks or overnight.
Heat/Cold	Heat stress/frostbite	Heat: Take frequent breaks and drink plenty of fluids. Watch for signs/symptoms of heat stress (fainting, dizziness, excessive sweating) Cold: Wear several layers of clothing, do not work in excessive cold, take frequent breaks.
Slip, trip and fall	Bruising, sprained ankle/foot/knee	Be aware of surroundings and practice good housekeeping measures around the site area to minimize items that pose a trip hazard.
Splash	Exposure to contaminants in the groundwater – dermal and/or eye	Wear gloves and safety glasses during purging of well and sample collection.
Hazardous Energy Control	Personal injury, electrocution	Use lockout/tagout controls to ensure that hazardous energy sources (electrical) are controlled prior to valve removal activities, including electrical and water pressure. All underground utilities should be marked prior to intrusive activities. A site walk-through should identify all overhead power lines.
Heavy Equipment	Struck by	Keep aware of the location of heavy equipment at all times. If overhead activities are taking place (drilling, digging) hard hats will be used.
Fire and Explosion	Flammable vapors from petroleum may ignite	Monitor for the presence of flammable vapors with an explosimeter. Fire extinguishers should be available. Evacuate the area immediately, call 911 and evaluate the situation.
Noise/Hearing Protection	Active drilling and other processes may exceed noise exposure standard of 85 decibels	Wear appropriate hearing protection.
Biological Hazards	Poisonous vegetation and/or stinging/biting insects or animals	Keep aware of surroundings and if bite or sting takes place seek first aid and/or medical attention

9.0. CHEMICAL HAZARDS POTENTIALLY ON SITE

9.1 Waste Characterization

Potential hazards for each of the tasks presented below are assessed. As work items are being performed, continued monitoring and observation will be used to determine if conditions change. Site Safety Officer will be responsible for continued assessment, and work practice modification in the event that unsafe work practices are observed. The following site activities are anticipated:

- Install groundwater probes
- Sample soil
- Sample groundwater

9.2 Hazard Evaluation

Chemicals of Concern: Identify all chemicals that are present or suspected to be present on site and the maximum concentrations detected in soil or water.

Chemical Name	TLV/PEL (8-hour TWA exposure limit for inhalation exposure in breathing zone)	Maximum Concentration in Soil (mg/kg or ppm)	Maximum Concentration in Water (mg/l or ppm)	Health Hazard/Comments
VOCs	Varies	TBD	TBD	Varies
SVOCs/PAHs	Varies	TBD	TBD	Varies
Metals	Varies	TBD	TBD	Varies

Is free product onsite? __ Yes __No __X_ Unsure

Will work tasks be performed inside buildings/enclosures? _ __ Yes _X_ No

Is there evidence that contaminants present could cause vapor problems in structures on-site? __Yes __ No _X_ Unsure

If Yes, is building mechanically ventilated? ___Yes ___No _X_ Unsure

10.0 BIOLOGICAL HAZARDS AND MITIGATION PROCEDURES

Contact with animals, insects, and plants can cause injury and illness to personnel. Care must be taken to ensure that these types of injuries are avoided. Some examples of biological hazards include:

- Wild animals, such as snakes, raccoons, squirrels, and rats. These animals not only can bite and scratch, but can carry transmittable diseases (e.g., rabies). Avoid the animals whenever possible. If bitten, go to the nearest medical facility.

- Insects such as mosquitoes, ticks, bees, and wasps. Mosquitoes can potentially carry and transmit the West Nile Virus or Eastern Equine Encephalitis (EEE). Ticks can transmit Lyme disease or Rocky Mountain Spotted Fever. Bees and wasps can sting by injecting venom, which causes some individuals to experience anaphylactic shock (an extreme allergic reaction). Whenever you will enter areas that provide a habitat for insects (e.g., grass areas, woods), wear light-colored clothing, long pants and shirt, and spray exposed skin areas with a DEET-containing repellent. Keep away from high grass wherever possible. Keep your eyes and ears open for bee and wasp nests. If bitten by insects, see a doctor if there is any question of an allergic reaction.

- Plants such as poison ivy and poison oak can cause severe rashes on exposed skin. Be careful where you walk, wear long pants, and minimize touching exposed skin with your hands after walking through thickly vegetated areas until after you have thoroughly washed your hands with soap and water.

11.0 ADDITIONAL HAZARDS

The following daily log should be filled out whenever an unexpected hazard is encountered. Include injuries, PPE used, or work stoppages caused by unsafe conditions.

Hazard Observed	Date	Observed by (Print Name)	Mitigation Taken/PPE Used

12.0 LIST OF FIELD ACTIVITIES

The following is a list of filed activities anticipated for this project:

- The first field activity in this investigation will be utility location. Because this is not an invasive activity, this Site Health and Safety Plan will not be applied to the utility locating contractor.

- Pre-marking groundwater probe locations will be performed by BCA. This is also not an invasive activity and no hazards are anticipated.

- Geophysical Survey. This is not an invasive activity and no hazards are anticipated. This activity will be performed by a subcontractor and overseen by BCA.

- Groundwater probe installation. This activity will be performed by BCA in the pre-marked areas.

- Groundwater sampling. This activity will be performed by BCA.

- Soil sampling. This activity will be performed by BCA.

13.0 SITE DESCRIPTION

Type of Facility (describe):	Warehouse
Type of Facility (describe):	**Commercial Building**
Active or Closed/Abandoned:	**Active**
Describe surface features (buildings, paved or unpaved, overhead/underground utilities):	**3 parcels, 1.7 acres, w/ one (1) building, paved lot, overhead utilities**
List any site access restrictions:	**None**

14.0 PERSONNEL PROTECTIVE GEAR/ENGINEERING CONTROLS

14.1 Personnel Protective Gear

Level D:

Soil concentrations in previous investigations are not expected to cause health risks if handled carefully. Sampling can be performed using modified Level D protection. The following items are needed for modified Level D.

- Hard hat (for overhead hazard activities)
- Steel-toe work boots
- Coveralls and/or long pants with short sleeved shirts (at a minimum)
- Eye protection when a splash hazard exists
- Hearing protection during active drilling or other loud operations
- Nitrile gloves for sampling and/or contact with soil and groundwater.

Modifications:

Modifications to this level of protection will be made if site conditions and/or contamination levels warrant an upgrade in protection level.

Level C:

If site conditions warrant, an upgrade to level C will be made if air monitoring equipment indicates respiratory protection is required. Air-purifying respirators with organic vapor cartridges will be used in this situation. The MSDS for that substance shall be consulted to determine the appropriate personal protective equipment (i.e. chemical resistant coveralls/gloves, chemical goggles, respiratory protection).

Surveillance Equipment and Materials:

Photo Ionization Detector

Work Limitations (Time of Day, etc.):

All sampling operations will be conducted during daylight hours. No smoking or eating during soil handling procedures.

14.1.1 PPE Donning and Doffing Information

The following information is to provide field personnel with helpful hints that, when applied, make donning and doffing of PPE a safe and manageable task:

- Never cut disposable booties from your feet with basic utility knives. This has resulted in workers cutting through the booty and the underlying sturdy leather work boot, resulting in significant cuts to the legs/ankles. Recommend using a pair of scissors or a package/letter opener (cut above and parallel with the work boot) to start a cut in the edge of the booty, then proceed by manually tearing the material down to the sole of the booty for easy removal.

- When applying duct tape to PPE interfaces (wrist, lower leg, around respirator, etc.) and zippers, leave approximately one inch at the end of the tape to fold over onto

  itself. This will make it much easier to remove the tape by providing a small handle to grab while still wearing gloves. Without this fold, trying to pull up the tape end with multiple gloves on may be difficult and result in premature tearing of the PPE.

- Have a "buddy" check your ensemble to ensure proper donning before entering controlled work areas. Without mirrors, the most obvious discrepancies can go unnoticed and may result in a potential exposure situation.

- Never perform personal decontamination with a pressure washer.

14.2 Medical Surveillance Requirements

All personnel must have completed the appropriate medical monitoring requirements as specified in 29 CFR 1910.120. Documentation of medical monitoring is the responsibility of each employer.

14.3 Engineering Control

The engineering control to prevent pedestrian/general population from exposure to hazards at the work site is Site Control.

14.3.1 Site Control Measures

Site controls establish the hazardous area perimeter and prevent access or exposure by unauthorized personnel or the public. The site map is attached to the Field Instructions and is incorporated as part of the HASP. The "buddy system" is to be used throughout those site operations that require it.

Site Entry Procedures: Notify property owner before mobilizing to the site.

Perimeter establishment/identification: Area of site east of the building will be work zone perimeter. See site map and field instructions attached.

An exclusion zone, contamination reduction zone and support zone will be identified for each site activity.

14.3.2 Emergency First Aid Procedures

If eye irritation, nausea, vomiting, dizziness, unusual odors or any other unusual mental or physical sensations are noticed, seek medical assistance.

Inhalation: Move person to fresh air, seek medical assistance.
Ingestion: Do not induce vomiting, seek medical attention.
Eyes: Flush with copious amounts of water.
Skin: Wash with soap and water.

15.0 AIR MONITORING REQUIREMENTS

Where VOC's are present, all soil samples will be field screened for semi-volatile organics using a photoionization detector (PID). During soil sample collection, it is expected that headspace gasses will be below the action level. However, during the course of soil sampling, if headspace gasses exceed 100 ppm, breathing zone monitoring will be conducted. If volatile gasses are detected in the breathing zone, the work activities work will stop and breathing zone gasses will be monitored using the PID or one of the other detectors outlined below. Further work may be conducted after elimination of all ignition sources, increasing the monitoring frequency, or elevating the level of PPE.

Instrumentation Available for Higher Level Air Monitoring:

INSTRUMENT	MANUFACTURER/MODEL*	SUBSTANCES DETECTED
Photo Ionization Detector (PID)	**RAE Systems mini-RAE Photovac Microtip HNu Model Hnu (10.2 eV Lamp)**	**Petroleum Hydrocarbons Organic Solvents**
Flame Ionization Detector (FID)	**Foxboro**	**Petroleum Hydrocarbons Organic Solvents**
Combustible Gas Indicator (CGI) May Be Combined with Individual or Multi-gas Detectors.	**TBD**	**Explosivity**
Individual Gas Detectors	**TBD**	**Oxygen (O_2) Carbon Monoxide (CO) Hydrogen Sulfide (H_2S) Cyanide Gases (CN^-)**
Particulate Monitor	**MIE Model PDM-3 mini-RAM**	**Aerosols, mist, dust, and fumes**
Colorimetric Detector Tubes	**Sensidyne Draeger**	**Benzene 0.5–10 ppm**

16.0 DECONTAMINATION PROCEDURES

Decontamination Procedures:

Contamination may result from walking through contaminated soils or liquids, splashing liquids during sampling, or use of or contact with contaminated equipment.

Decontamination procedures for the following tasks will be observed onsite:

- **Soil Probe Sampling**: Dedicated, disposable equipment will be used to the extent practicable. If non-dedicated equipment is used, it will be decontaminated with a detergent wash and distilled water rinse before and between sampling.

- **Groundwater Sampling**: All non-dedicated equipment will be decontaminated with a detergent wash and distilled water rinse before and between sampling.

- **Shallow Soil Sampling**: When a hand auger is used during soil sampling, it will be decontaminated with a detergent wash and distilled water rinse before and between sampling.

- **PPE**: All contaminated, disposable clothing will be properly bagged for disposal and left onsite for proper disposal. The PPE may be added to the soil drums for disposal.

17.0 WASTE STORAGE/DISPOSAL

Investigation-derived Material Disposal:

The purge and decontamination water, and disposable protective gear are to be placed in 55 - gallon drums, labeled and stored on site pending the receipt of the laboratory analysis. Free product and contaminated water must remain on-site until the proper disposal method is determined.

The drums of investigative waste will be hauled by a contractor who will be subject to the provisions of this site health and safety plan. Waste disposal will be performed in a manor appropriate to the waste characteristic identified by waste profiling.

17.1 Spill Containment Program

No anticipated spills or releases of hazardous chemicals are associated with this project. Any spills will be contained and drummed for proper disposal.

18.0 DOCUMENTS EXPECTED TO BE COMPLETED

The Site Safety Officer will maintain a master Site Health and Safety Plan which will be updated with the Daily Log (Section 11.0) and daily sign in sheets. In the event that site conditions warrant updating this Site Health and Safety Plan, updated sections will be appended to this plan. The master Site Health and Safety Plan will be archived in the project file at the offices of BCA for ten years following the end of the project.

Other documents which will be maintained include field books, boring logs, groundwater sampling sheets, contractor provided MSDSs, and correspondence.

19.0 APPROVALS

I, the undersigned, attest that I am familiar with the contents of this Health and Safety Plan and do agree to administrate the procedures described herein.

Plan Prepared by: _____ Date: 5/14/2019

Plan Approved by: _____ Date: 5/14/2019

Health and Safety Officer: _____ Date: 5/14/2019

20.0 EMPLOYEE ACKNOWLEDGMENT

The designated BCA employee shall be responsible for informing all individuals entering the exclusion zone of the contents of this plan, and ensuring each person signs the employee acknowledgment form. By signing this form, individuals are recognizing the hazards present on site and the policies and procedures required to minimize exposure or adverse affects of these hazards.

I have read the site health and safety plan and have been briefed and fully understand all of the following aspects of the project:

Hazards associated with the project:

1. Personal protective equipment;
2. Emergency procedures/contacts;
3. Project team-member responsibilities; and,
4. Work zones and decontamination procedures.

I have undergone medical monitoring and have been respirator fit-tested in the last year.

Form must be signed each day on site.

June 4, 2019

Client Project Name: 19-146 / Bloomington

Dear Client,

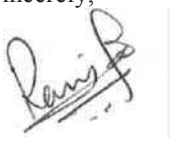
We are pleased to provide the attached analytical report(s) for the samples received May 20, 2019. All testing was performed as requested on the enclosed chain of custody. All methods cited were executed in full compliance with local, state, and EPA regulations. All control data met QA/QC criteria as outlined in EPA methodology. Please review the flag sections for any and all deviations from the Quality Control Data and Procedures.

LSAI Labs utilized the following EPA methodologies to perform the volatile organics (VOCs) assay in soil. Preservation technique referenced in table 4-1 of SW-846; sample preparation via 5035A; and sample analysis was performed using GC/MS via 8260B.

Please contact me with any questions, concerns, or comments regarding the attached analytical report.

Thank you for your business. We are committed to providing Lab Solutions and Services for your upcoming Analytical Testing needs and Issues.

Sincerely,



Ranjani Muralidharan, Ph.D.

Lab Solutions for AnalyticalTesting & Issues

FLAGS & DEFINITIONS

FLAGS & QUALIFIERS

B	Analyte detected in the blank
C	Result confirmed by reanalysis
DF	Dilution Factor: represents factor applied to sample aliquot due to a dilution 1 - reported result is a 2X dilution; 2 - reported result is a 5X dilution; 3 – reported result is a 10X dilution; 4 – reported result is a 20X dilution; 5 – reported result is a 25X dilution; 6 – reported result is a 50X dilution; 7 – reported result is a 100X dilution; 8 – reported result is a 250X dilution; 9 – reported result is a 500X dilution; 10 – reported result is a 1000X dilution; 11 – reported result is a 2500X dilution .
E	Concentration exceeds calibration range
J	Estimated value J1. ≥ Method Detection Limit (MDL) & < Limit of Quantitation (LOQ) or Reporting Limit (RL) J2. Estimated due to presence of interference
U	Analyzed for but not detected
N	Indicates presumptive evidence of a compound
P	Post-analysis pH measurement indicates insufficient VOA sample preservation.
R	Recovery outside control limits
R1	RPD value outside control limits
Rd	Duplicate analysis outside control limits

DEFINITIONS

RL: Reporting Limit
BMQL: Below Minimum Quantitation Level
LCS: Laboratory Control Sample
LCS (D): Laboratory Control Sample Duplicate
MS: Matrix Spike
MSD: Matrix Spike Duplicate
DUP: Sample Duplicate
RPD: Relative Percent Difference
ND: none detected
MPN: Most Probable Number
ppm: parts per million
ppb: parts per billion
TNI: The NELAC Institute
S: Surrogate

Note: A critical step involved in environmental analysis is the sample collection. It is required by the client that the submitted sample is truly representative of the replicate(s) and/or bulk material.

This report shall not be reproduced except in full, without the written approval of the laboratory.

Concentration ug/kg = $\frac{Xs}{Ws} \times Vt \times D$

Xs = ng/mL response from instrument, or sequence multiplier x5 as ng
Vt = total volume of extract solvent, if extracted
D = dilution if extracted
Ws = weight of sample extracted or purged
TS% = Total solids %, Can be included in Vt or applied to Ws

RE: Project: 216 College / 19-146
Pace Project No.: 50225466

Dear Mr. Teuschler:
Enclosed are the analytical results for sample(s) received by the laboratory on May 17, 2019. The results relate only to the samples included in this report. Results reported herein conform to the most current, applicable TNI/NELAC standards and the laboratory's Quality Assurance Manual, where applicable, unless otherwise noted in the body of the report.

If you have any questions concerning this report, please feel free to contact me.

Sincerely,

Regina Bedel

ANALYTICAL RESULTS

Project: 216 College / 19-146
Pace Project No.: 50225466

Sample: SP-1 (3-5) **Lab ID: 50225466001** Collected: 05/16/19 12:40 Received: 05/17/19 18:01 Matrix: Solid

Results reported on a "dry weight" basis and are adjusted for percent moisture, sample size and any dilutions.

Parameters	Results	Units	PQL	MDL	DF	Prepared	Analyzed	CAS No.	Qual

ANALYTICAL RESULTS

Project: 216 College / 19-146
Pace Project No.: 50225466

Sample: SP-1 (5-7) **Lab ID: 50225466002** Collected: 05/16/19 12:45 Received: 05/17/19 18:01 Matrix: Solid

Results reported on a "dry weight" basis and are adjusted for percent moisture, sample size and any dilutions.

Parameters	Results	Units	PQL	MDL	DF	Prepared	Analyzed	CAS No.	Qual
8270 SVOC Combo Soil	Analytical Method: EPA 8270 Preparation Method: EPA 3546 Initial Volume/Weight: 30.1 g Final Volume/Weight: 1 mL								
Surrogates

ANALYTICAL RESULTS

Project: 216 College / 19-146
Pace Project No.: 50225466

Sample: SP-3 (2-4) **Lab ID: 50225466006** Collected: 05/16/19 10:30 Received: 05/17/19 18:01 Matrix: Solid

Results reported on a "dry weight" basis and are adjusted for percent moisture, sample size and any dilutions.

Parameters	Results	Units	PQL	MDL	DF	Prepared	Analyzed	CAS No.	Qual

ANALYTICAL RESULTS

Project: 216 College / 19-146
Pace Project No.: 50225466

Sample: SP-5 (6-8) **Lab ID: 50225466018** Collected: 05/16/19 11:37 Received: 05/17/19 18:01 Matrix: Solid

Results reported on a "dry weight" basis and are adjusted for percent moisture, sample size and any dilutions.

Parameters	Results	Units	PQL	MDL	DF	Prepared	Analyzed	CAS No.	Qual
8270 SVOC Combo Soil	Analytical Method: EPA 8270 Preparation Method: EPA 3546 Initial Volume/Weight: 30.2 g Final Volume/Weight: 1 mL

QUALIFIERS

Project: 216 College / 19-146
Pace Project No.: 50225466

DEFINITIONS

DF - Dilution Factor, if reported, represents the factor applied to the reported data due to dilution of the sample aliquot.

ND - Not Detected at or above adjusted reporting limit.

TNTC - Too Numerous To Count

J - Estimated concentration above the adjusted method detection limit and below the adjusted reporting limit.

MDL - Adjusted Method Detection Limit.

PQL - Practical Quantitation Limit.

RL - Reporting Limit - The lowest concentration value that meets project requirements for quantitative data with known precision and bias for a specific analyte in a specific matrix.

S - Surrogate

1,2-Diphenylhydrazine decomposes to and cannot be separated from Azobenzene using Method 8270. The result for each analyte is a combined concentration.

Consistent with EPA guidelines, unrounded data are displayed and have been used to calculate % recovery and RPD values.

LCS(D) - Laboratory Control Sample (Duplicate)

MS(D) - Matrix Spike (Duplicate)

DUP - Sample Duplicate

RPD - Relative Percent Difference

NC - Not Calculable.

SG - Silica Gel - Clean-Up

U - Indicates the compound was analyzed for, but not detected.

N-Nitrosodiphenylamine decomposes and cannot be separated from Diphenylamine using Method 8270. The result reported for each analyte is a combined concentration.

Pace Analytical is TNI accredited. Contact your Pace PM for the current list of accredited analytes.

TNI - The NELAC Institute.

LABORATORIES

PASI-I	Pace Analytical Services - Indianapolis

ANALYTE QUALIFIERS

1d	RPD is outside control limits due to sample non-homogeneity
2d	RPD is outside control limits due to sample non-homogeneity KJE 5/28/19
ED	Due to the extract's physical characteristics, the analysis was performed at dilution.
M0	Matrix spike recovery and/or matrix spike duplicate recovery was outside laboratory control limits.
M3	Matrix spike recovery was outside laboratory control limits due to matrix interferences.
M6	Matrix spike and Matrix spike duplicate recovery not evaluated against control limits due to sample dilution.
P6	Matrix spike recovery was outside laboratory control limits due to a parent sample concentration notably higher than the spike level.

RE: Project: 216 S. College / 19-146
Pace Project No.: 50227372

Dear Mr. Teuschler:
Enclosed are the analytical results for sample(s) received by the laboratory on June 07, 2019. The results relate only to the samples included in this report. Results reported herein conform to the most current, applicable TNI/NELAC standards and the laboratory's Quality Assurance Manual, where applicable, unless otherwise noted in the body of the report.

If you have any questions concerning this report, please feel free to contact me.

Sincerely,

Regina Bedel

QUALIFIERS

Project: 216 S. College / 19-146
Pace Project No.: 50227372

DEFINITIONS

DF - Dilution Factor, if reported, represents the factor applied to the reported data due to dilution of the sample aliquot.

ND - Not Detected at or above adjusted reporting limit.

TNTC - Too Numerous To Count

J - Estimated concentration above the adjusted method detection limit and below the adjusted reporting limit.

MDL - Adjusted Method Detection Limit.

PQL - Practical Quantitation Limit.

RL - Reporting Limit - The lowest concentration value that meets project requirements for quantitative data with known precision and bias for a specific analyte in a specific matrix.

S - Surrogate

1,2-Diphenylhydrazine decomposes to and cannot be separated from Azobenzene using Method 8270. The result for each analyte is a combined concentration.

Consistent with EPA guidelines, unrounded data are displayed and have been used to calculate % recovery and RPD values.

LCS(D) - Laboratory Control Sample (Duplicate)

MS(D) - Matrix Spike (Duplicate)

DUP - Sample Duplicate

RPD - Relative Percent Difference

NC - Not Calculable.

SG - Silica Gel - Clean-Up

U - Indicates the compound was analyzed for, but not detected.

N-Nitrosodiphenylamine decomposes and cannot be separated from Diphenylamine using Method 8270. The result reported for each analyte is a combined concentration.

Pace Analytical is TNI accredited. Contact your Pace PM for the current list of accredited analytes.

TNI - The NELAC Institute.

May 29, 2019

Client Project Name: 19-146 / Bloomington, IN

Dear Client,

We are pleased to provide the attached analytical report(s) for the samples received May 20, 2019. All testing was performed as requested on the enclosed chain of custody. All methods cited were executed in full compliance with local, state, and EPA regulations. All control data met QA/QC criteria as outlined in EPA methodology. Please review the flag sections for any and all deviations from the Quality Control Data and Procedures.

LSAI Labs utilized the following EPA methodologies to perform the volatile organics (VOCs) assay in ground water. Preservation technique referenced in table 4-1 of SW-846; sample preparation via 5030B; and sample analysis using GC/MS via 8260B.

Please contact me with any questions, concerns, or comments regarding the attached analytical report.

Thank you for your business. We are committed to providing Lab Solutions and Services for your upcoming Analytical Testing needs and Issues.

Sincerely,

Pramod K. Sethia

Laboratory Manager

Lab Solutions for AnalyticalTesting & Issues

FLAGS & DEFINITIONS

FLAGS & QUALIFIERS

B	Analyte detected in the blank
C	Result confirmed by reanalysis
DF	Dilution Factor: represents factor applied to sample aliquot due to a dilution 1 - reported result is a 2X dilution; 2 - reported result is a 5X dilution; 3 – reported result is a 10X dilution; 4 – reported result is a 20X dilution; 5 – reported result is a 25X dilution; 6 – reported result is a 50X dilution; 7 – reported result is a 100X dilution; 8 – reported result is a 250X dilution; 9 – reported result is a 500X dilution; 10 – reported result is a 1000X dilution; 11 – reported result is a 2500X dilution .
E	Concentration exceeds calibration range
J	Estimated value J1. ≥ Method Detection Limit (MDL) & < Limit of Quantitation (LOQ) or Reporting Limit (RL) J2. Estimated due to presence of interference
U	Analyzed for but not detected
N	Indicates presumptive evidence of a compound
P	Post-analysis pH measurement indicates insufficient VOA sample preservation.
R	Recovery outside control limits
R1	RPD value outside control limits
Rd	Duplicate analysis outside control limits

DEFINITIONS

RL: Reporting Limit
BMQL: Below Minimum Quantitation Level
LCS: Laboratory Control Sample
LCS (D): Laboratory Control Sample Duplicate
MS: Matrix Spike
MSD: Matrix Spike Duplicate
DUP: Sample Duplicate
RPD: Relative Percent Difference
ND: none detected
MPN: Most Probable Number
ppm: parts per million
ppb: parts per billion
TNI: The NELAC Institute
S: Surrogate

Note: A critical step involved in environmental analysis is the sample collection. It is required by the client that the submitted sample is truly representative of the replicate(s) and/or bulk material.

This report shall not be reproduced except in full, without the written approval of the laboratory.

RE: Project: 216 College / 19-146
Pace Project No.: 50225468

Dear Mr. Teuschler:
Enclosed are the analytical results for sample(s) received by the laboratory on May 17, 2019. The results relate only to the samples included in this report. Results reported herein conform to the most current, applicable TNI/NELAC standards and the laboratory's Quality Assurance Manual, where applicable, unless otherwise noted in the body of the report.

Some analyses have been subcontracted outside of the Pace Network. The subcontracted laboratory report has been attached.

If you have any questions concerning this report, please feel free to contact me.

Sincerely,

Regina Bedel
regina.bedel@pacelabs.com

Indianapolis, IN 46268
(317)228-3100

QUALIFIERS

Project: 216 College / 19-146
Pace Project No.: 50225468

DEFINITIONS

DF - Dilution Factor, if reported, represents the factor applied to the reported data due to dilution of the sample aliquot.

ND - Not Detected at or above adjusted reporting limit.

TNTC - Too Numerous To Count

J - Estimated concentration above the adjusted method detection limit and below the adjusted reporting limit.

MDL - Adjusted Method Detection Limit.

PQL - Practical Quantitation Limit.

RL - Reporting Limit - The lowest concentration value that meets project requirements for quantitative data with known precision and bias for a specific analyte in a specific matrix.

S - Surrogate

1,2-Diphenylhydrazine decomposes to and cannot be separated from Azobenzene using Method 8270. The result for each analyte is a combined concentration.

Consistent with EPA guidelines, unrounded data are displayed and have been used to calculate % recovery and RPD values.

LCS(D) - Laboratory Control Sample (Duplicate)

MS(D) - Matrix Spike (Duplicate)

DUP - Sample Duplicate

RPD - Relative Percent Difference

NC - Not Calculable.

SG - Silica Gel - Clean-Up

U - Indicates the compound was analyzed for, but not detected.

N-Nitrosodiphenylamine decomposes and cannot be separated from Diphenylamine using Method 8270. The result reported for each analyte is a combined concentration.

Pace Analytical is TNI accredited. Contact your Pace PM for the current list of accredited analytes.

TNI - The NELAC Institute.

LABORATORIES

PASI-I	Pace Analytical Services - Indianapolis

ANALYTE QUALIFIERS

M3	Matrix spike recovery was outside laboratory control limits due to matrix interferences.
R1	RPD value was outside control limits.

ANALYTICAL REPORT

May 30, 2019

Pace Analytical - Indianapolis, IN

Sample Delivery Group:	L1101712
Samples Received:	05/23/2019
Project Number:	50225468
Description:	216 College / 19-146

Report To: Regina Bedel
7726 Moller Rd.
Indianapolis, IN 46268

Entire Report Reviewed By:

Nancy McLain
Project Manager

Results relate only to the items tested or calibrated and are reported as rounded values. This test report shall not be reproduced, except in full, without written approval of the laboratory. Where applicable, sampling conducted by Pace National is performed per guidance provided in laboratory standard operating procedures: 060302, 060303, and 060304.

All sample aliquots were received at the correct temperature, in the proper containers, with the appropriate preservatives, and within method specified holding times, unless qualified or notated within the report. Where applicable, all MDL (LOD) and RDL (LOQ) values reported for environmental samples have been corrected for the dilution factor used in the analysis. All Method and Batch Quality Control are within established criteria except where addressed in this case narrative, a non-conformance form or properly qualified within the sample results. By my digital signature below, I affirm to the best of my knowledge, all problems/anomalies observed by the laboratory as having the potential to affect the quality of the data have been identified by the laboratory, and no information or data have been knowingly withheld that would affect the quality of the data.

Nancy McLain
Project Manager

Guide to Reading and Understanding Your Laboratory Report

The information below is designed to better explain the various terms used in your report of analytical results from the Laboratory. This is not intended as a comprehensive explanation, and if you have additional questions please contact your project representative.

Abbreviations and Definitions

MDL	Method Detection Limit.
RDL	Reported Detection Limit.
Rec.	Recovery.
RPD	Relative Percent Difference.
SDG	Sample Delivery Group.
U	Not detected at the Reporting Limit (or MDL where applicable).
Analyte	The name of the particular compound or analysis performed. Some Analyses and Methods will have multiple analytes reported.
Dilution	If the sample matrix contains an interfering material, the sample preparation volume or weight values differ from the standard, or if concentrations of analytes in the sample are higher than the highest limit of concentration that the laboratory can accurately report, the sample may be diluted for analysis. If a value different than 1 is used in this field, the result reported has already been corrected for this factor.
Limits	These are the target % recovery ranges or % difference value that the laboratory has historically determined as normal for the method and analyte being reported. Successful QC Sample analysis will target all analytes recovered or duplicated within these ranges.
Original Sample	The non-spiked sample in the prep batch used to determine the Relative Percent Difference (RPD) from a quality control sample. The Original Sample may not be included within the reported SDG.
Qualifier	This column provides a letter and/or number designation that corresponds to additional information concerning the result reported. If a Qualifier is present, a definition per Qualifier is provided within the Glossary and Definitions page and potentially a discussion of possible implications of the Qualifier in the Case Narrative if applicable.
Result	The actual analytical final result (corrected for any sample specific characteristics) reported for your sample. If there was no measurable result returned for a specific analyte, the result in this column may state “ND” (Not Detected) or “BDL” (Below Detectable Levels). The information in the results column should always be accompanied by either an MDL (Method Detection Limit) or RDL (Reporting Detection Limit) that defines the lowest value that the laboratory could detect or report for this analyte.
Uncertainty (Radiochemistry)	Confidence level of 2 sigma.
Case Narrative (Cn)	A brief discussion about the included sample results, including a discussion of any non-conformances to protocol observed either at sample receipt by the laboratory from the field or during the analytical process. If present, there will be a section in the Case Narrative to discuss the meaning of any data qualifiers used in the report.
Quality Control Summary (Qc)	This section of the report includes the results of the laboratory quality control analyses required by procedure or analytical methods to assist in evaluating the validity of the results reported for your samples. These analyses are not being performed on your samples typically, but on laboratory generated material.
Sample Chain of Custody (Sc)	This is the document created in the field when your samples were initially collected. This is used to verify the time and date of collection, the person collecting the samples, and the analyses that the laboratory is requested to perform. This chain of custody also documents all persons (excluding commercial shippers) that have had control or possession of the samples from the time of collection until delivery to the laboratory for analysis.
Sample Results (Sr)	This section of your report will provide the results of all testing performed on your samples. These results are provided by sample ID and are separated by the analyses performed on each sample. The header line of each analysis section for each sample will provide the name and method number for the analysis reported.
Sample Summary (Ss)	This section of the Analytical Report defines the specific analyses performed for each sample ID, including the dates and times of preparation and/or analysis.

Qualifier	Description
J	The identification of the analyte is acceptable; the reported value is an estimate.
J6	The sample matrix interfered with the ability to make any accurate determination; spike value is low.
P1	RPD value not applicable for sample concentrations less than 5 times the reporting limit.

Pace National is the only environmental laboratory accredited/certified to support your work nationwide from one location. One phone call, one point of contact, one laboratory. No other lab is as accessible or prepared to handle your needs throughout the country. Our capacity and capability from our single location laboratory is comparable to the collective totals of the network laboratories in our industry. The most significant benefit to our one location design is the design of our laboratory campus. The model is conducive to accelerated productivity, decreasing turn-around time, and preventing cross contamination, thus protecting sample integrity. Our focus on premium quality and prompt service allows us to be YOUR LAB OF CHOICE.
* Not all certifications held by the laboratory are applicable to the results reported in the attached report.
* Accreditation is only applicable to the test methods specified on each scope of accreditation held by Pace National.

RE: Project: 216 College / 19-146
Pace Project No.: 50225466

Dear Mr. Teuschler:
Enclosed are the analytical results for sample(s) received by the laboratory on May 17, 2019. The results relate only to the samples included in this report. Results reported herein conform to the most current, applicable TNI/NELAC standards and the laboratory's Quality Assurance Manual, where applicable, unless otherwise noted in the body of the report.

If you have any questions concerning this report, please feel free to contact me.

Sincerely,

Regina Bedel
regina.bedel@pacelabs.com

ANALYTICAL RESULTS

Project: 216 College / 19-146
Pace Project No.: 50225466

Sample: SP-2 (2-4) **Lab ID: 50225466004** Collected: 05/16/19 10:05 Received: 05/17/19 18:01 Matrix: Solid

Results reported on a "dry weight" basis and are adjusted for percent moisture, sample size and any dilutions.

Parameters	Results	Units	PQL	MDL	DF	Prepared	Analyzed	CAS No.	Qual
8270 SVOC Combo Soil	Analytical Method: EPA 8270 Preparation Method: EPA 3546 Initial Volume/Weight: 30.3 g Final Volume/Weight: 1 mL

ANALYTICAL RESULTS

Project: 216 College / 19-146
Pace Project No.: 50225466

Sample: SP-3 (0-2) **Lab ID: 50225466005** Collected: 05/16/19 10:25 Received: 05/17/19 18:01 Matrix: Solid

Results reported on a "dry weight" basis and are adjusted for percent moisture, sample size and any dilutions.

Parameters	Results	Units	PQL	MDL	DF	Prepared	Analyzed	CAS No.	Qual
8270 SVOC Combo Soil	Analytical Method: EPA 8270 Preparation Method: EPA 3546 Initial Volume/Weight: 30.3 g Final Volume/Weight: 1 mL

ANALYTICAL RESULTS

Project: 216 College / 19-146
Pace Project No.: 50225466

Sample: SP-4 (9-10.5) **Lab ID: 50225466011** Collected: 05/16/19 12:10 Received: 05/17/19 18:01 Matrix: Solid

Results reported on a "dry weight" basis and are adjusted for percent moisture, sample size and any dilutions.

Parameters	Results	Units	PQL	MDL	DF	Prepared	Analyzed	CAS No.	Qual
8270 SVOC Combo Soil	Analytical Method: EPA 8270 Preparation Method: EPA 3546 Initial Volume/Weight: 30.4 g Final Volume/Weight: 1 mL

QC Batch: 502836 Analysis Method: SM 2540G
QC Batch Method: SM 2540G Analysis Description: Dry Weight/Percent Moisture
Associated Lab Samples: 50225466006, 50225466007, 50225466008, 50225466009, 50225466010, 50225466011, 50225466012, 50225466013, 50225466014, 50225466015, 50225466016, 50225466017, 50225466018

SAMPLE DUPLICATE: 2320625

Parameter	Units	50225404004 Result	Dup Result	RPD	Max RPD	Qualifiers
Percent Moisture	%	17.6	18.2	3	5	

SAMPLE DUPLICATE: 2320626

Parameter	Units	50225466016 Result	Dup Result	RPD	Max RPD	Qualifiers
Percent Moisture	%	32.6	32.0	2	5	

Results presented on this page are in the units indicated by the "Units" column except where an alternate unit is presented to the right of the result.

REPORT OF LABORATORY ANALYSIS

This report shall not be reproduced, except in full,
without the written consent of Pace Analytical Services, LLC.

Pace Analytical Services, LLC
7726 Moller Road
Indianapolis, IN 46268
(317)228-3100

QUALIFIERS

Project: 216 College / 19-146
Pace Project No.: 50225466

DEFINITIONS

DF - Dilution Factor, if reported, represents the factor applied to the reported data due to dilution of the sample aliquot.

ND - Not Detected at or above adjusted reporting limit.

TNTC - Too Numerous To Count

J - Estimated concentration above the adjusted method detection limit and below the adjusted reporting limit.

MDL - Adjusted Method Detection Limit.

PQL - Practical Quantitation Limit.

RL - Reporting Limit - The lowest concentration value that meets project requirements for quantitative data with known precision and bias for a specific analyte in a specific matrix.

S - Surrogate

1,2-Diphenylhydrazine decomposes to and cannot be separated from Azobenzene using Method 8270. The result for each analyte is a combined concentration.

Consistent with EPA guidelines, unrounded data are displayed and have been used to calculate % recovery and RPD values.

LCS(D) - Laboratory Control Sample (Duplicate)

MS(D) - Matrix Spike (Duplicate)

DUP - Sample Duplicate

RPD - Relative Percent Difference

NC - Not Calculable.

SG - Silica Gel - Clean-Up

U - Indicates the compound was analyzed for, but not detected.

N-Nitrosodiphenylamine decomposes and cannot be separated from Diphenylamine using Method 8270. The result reported for each analyte is a combined concentration.

Pace Analytical is TNI accredited. Contact your Pace PM for the current list of accredited analytes.

TNI - The NELAC Institute.

LABORATORIES

PASI-I	Pace Analytical Services - Indianapolis

ANALYTE QUALIFIERS

1d	RPD is outside control limits due to sample non-homogeneity
2d	RPD is outside control limits due to sample non-homogeneity KJE 5/28/19
ED	Due to the extract's physical characteristics, the analysis was performed at dilution.
M0	Matrix spike recovery and/or matrix spike duplicate recovery was outside laboratory control limits.
M3	Matrix spike recovery was outside laboratory control limits due to matrix interferences.
M6	Matrix spike and Matrix spike duplicate recovery not evaluated against control limits due to sample dilution.
P6	Matrix spike recovery was outside laboratory control limits due to a parent sample concentration notably higher than the spike level.

This report shall not be reproduced, except in full,

June 11, 2019

Mr. Jacob Teuschler
BCA Environmental Consultants, LLC
7202 E. 87th St.
Suite 110
Indianapolis, IN 46256

RE: Project: 216 College / 19-146
Pace Project No.: 50225468

Dear Mr. Teuschler:
Enclosed are the analytical results for sample(s) received by the laboratory on May 17, 2019. The results relate only to the samples included in this report. Results reported herein conform to the most current, applicable TNI/NELAC standards and the laboratory's Quality Assurance Manual, where applicable, unless otherwise noted in the body of the report.

Some analyses have been subcontracted outside of the Pace Network. The subcontracted laboratory report has been attached.

Revised Report: This revision replaces previous report dated June 4, 2019. Field filtered metals were added per client request. 6/7/19 RRB

If you have any questions concerning this report, please feel free to contact me.

Sincerely,

Regina Bedel

Results presented on this page are in the units indicated by the "Units" column except where an alternate unit is presented to the right of the result.

REPORT OF LABORATORY ANALYSIS

This report shall not be reproduced, except in full,
without the written consent of Pace Analytical Services, LLC.

Pace Analytical Services, LLC
7726 Moller Road
Indianapolis, IN 46268
(317)228-3100

QUALIFIERS

Project: 216 College / 19-146
Pace Project No.: 50225468

DEFINITIONS

DF - Dilution Factor, if reported, represents the factor applied to the reported data due to dilution of the sample aliquot.

ND - Not Detected at or above adjusted reporting limit.

TNTC - Too Numerous To Count

J - Estimated concentration above the adjusted method detection limit and below the adjusted reporting limit.

MDL - Adjusted Method Detection Limit.

PQL - Practical Quantitation Limit.

RL - Reporting Limit - The lowest concentration value that meets project requirements for quantitative data with known precision and bias for a specific analyte in a specific matrix.

S - Surrogate

1,2-Diphenylhydrazine decomposes to and cannot be separated from Azobenzene using Method 8270. The result for each analyte is a combined concentration.

Consistent with EPA guidelines, unrounded data are displayed and have been used to calculate % recovery and RPD values.

LCS(D) - Laboratory Control Sample (Duplicate)

MS(D) - Matrix Spike (Duplicate)

DUP - Sample Duplicate

RPD - Relative Percent Difference

NC - Not Calculable.

SG - Silica Gel - Clean-Up

U - Indicates the compound was analyzed for, but not detected.

N-Nitrosodiphenylamine decomposes and cannot be separated from Diphenylamine using Method 8270. The result reported for each analyte is a combined concentration.

Pace Analytical is TNI accredited. Contact your Pace PM for the current list of accredited analytes.

TNI - The NELAC Institute.

LABORATORIES

PASI-I	Pace Analytical Services - Indianapolis

ANALYTE QUALIFIERS

M3	Matrix spike recovery was outside laboratory control limits due to matrix interferences.
R1	RPD value was outside control limits.

All sample aliquots were received at the correct temperature, in the proper containers, with the appropriate preservatives, and within method specified holding times, unless qualified or notated within the report. Where applicable, all MDL (LOD) and RDL (LOQ) values reported for environmental samples have been corrected for the dilution factor used in the analysis. All Method and Batch Quality Control are within established criteria except where addressed in this case narrative, a non-conformance form or properly qualified within the sample results. By my digital signature below, I affirm to the best of my knowledge, all problems/anomalies observed by the laboratory as having the potential to affect the quality of the data have been identified by the laboratory, and no information or data have been knowingly withheld that would affect the quality of the data.

Guide to Reading and Understanding Your Laboratory Report

The information below is designed to better explain the various terms used in your report of analytical results from the Laboratory. This is not intended as a comprehensive explanation, and if you have additional questions please contact your project representative.

Abbreviations and Definitions

MDL	Method Detection Limit.
RDL	Reported Detection Limit.
Rec.	Recovery.
RPD	Relative Percent Difference.
SDG	Sample Delivery Group.
U	Not detected at the Reporting Limit (or MDL where applicable).
Analyte	The name of the particular compound or analysis performed. Some Analyses and Methods will have multiple analytes reported.
Dilution	If the sample matrix contains an interfering material, the sample preparation volume or weight values differ from the standard, or if concentrations of analytes in the sample are higher than the highest limit of concentration that the laboratory can accurately report, the sample may be diluted for analysis. If a value different than 1 is used in this field, the result reported has already been corrected for this factor.
Limits	These are the target % recovery ranges or % difference value that the laboratory has historically determined as normal for the method and analyte being reported. Successful QC Sample analysis will target all analytes recovered or duplicated within these ranges.
Original Sample	The non-spiked sample in the prep batch used to determine the Relative Percent Difference (RPD) from a quality control sample. The Original Sample may not be included within the reported SDG.
Qualifier	This column provides a letter and/or number designation that corresponds to additional information concerning the result reported. If a Qualifier is present, a definition per Qualifier is provided within the Glossary and Definitions page and potentially a discussion of possible implications of the Qualifier in the Case Narrative if applicable.
Result	The actual analytical final result (corrected for any sample specific characteristics) reported for your sample. If there was no measurable result returned for a specific analyte, the result in this column may state “ND” (Not Detected) or “BDL” (Below Detectable Levels). The information in the results column should always be accompanied by either an MDL (Method Detection Limit) or RDL (Reporting Detection Limit) that defines the lowest value that the laboratory could detect or report for this analyte.
Uncertainty (Radiochemistry)	Confidence level of 2 sigma.
Case Narrative (Cn)	A brief discussion about the included sample results, including a discussion of any non-conformances to protocol observed either at sample receipt by the laboratory from the field or during the analytical process. If present, there will be a section in the Case Narrative to discuss the meaning of any data qualifiers used in the report.
Quality Control Summary (Qc)	This section of the report includes the results of the laboratory quality control analyses required by procedure or analytical methods to assist in evaluating the validity of the results reported for your samples. These analyses are not being performed on your samples typically, but on laboratory generated material.
Sample Chain of Custody (Sc)	This is the document created in the field when your samples were initially collected. This is used to verify the time and date of collection, the person collecting the samples, and the analyses that the laboratory is requested to perform. This chain of custody also documents all persons (excluding commercial shippers) that have had control or possession of the samples from the time of collection until delivery to the laboratory for analysis.
Sample Results (Sr)	This section of your report will provide the results of all testing performed on your samples. These results are provided by sample ID and are separated by the analyses performed on each sample. The header line of each analysis section for each sample will provide the name and method number for the analysis reported.
Sample Summary (Ss)	This section of the Analytical Report defines the specific analyses performed for each sample ID, including the dates and times of preparation and/or analysis.

Qualifier	Description
J	The identification of the analyte is acceptable; the reported value is an estimate.
J6	The sample matrix interfered with the ability to make any accurate determination; spike value is low.
P1	RPD value not applicable for sample concentrations less than 5 times the reporting limit.

Pace National is the only environmental laboratory accredited/certified to support your work nationwide from one location. One phone call, one point of contact, one laboratory. No other lab is as accessible or prepared to handle your needs throughout the country. Our capacity and capability from our single location laboratory is comparable to the collective totals of the network laboratories in our industry. The most significant benefit to our one location design is the design of our laboratory campus. The model is conducive to accelerated productivity, decreasing turn-around time, and preventing cross contamination, thus protecting sample integrity. Our focus on premium quality and prompt service allows us to be YOUR LAB OF CHOICE.
* Not all certifications held by the laboratory are applicable to the results reported in the attached report.
* Accreditation is only applicable to the test methods specified on each scope of accreditation held by Pace National.

ANALYTICAL REPORT

July 01, 2019

Pace Analytical - Indianapolis, IN

Sample Delivery Group:	L1101712
Samples Received:	05/23/2019
Project Number:	50225468
Description:	216 College / 19-146

Report To: Regina Bedel
7726 Moller Rd.
Indianapolis, IN 46268

Entire Report Reviewed By: Nancy F. McLain

Nancy McLain
Project Manager

Results relate only to the items tested or calibrated and are reported as rounded values. This test report shall not be reproduced, except in full, without written approval of the laboratory. Where applicable, sampling conducted by Pace National is performed per guidance provided in laboratory standard operating procedures: 060302, 060303, and 060304.

All sample aliquots were received at the correct temperature, in the proper containers, with the appropriate preservatives, and within method specified holding times, unless qualified or notated within the report. Where applicable, all MDL (LOD) and RDL (LOQ) values reported for environmental samples have been corrected for the dilution factor used in the analysis. All Method and Batch Quality Control are within established criteria except where addressed in this case narrative, a non-conformance form or properly qualified within the sample results. By my digital signature below, I affirm to the best of my knowledge, all problems/anomalies observed by the laboratory as having the potential to affect the quality of the data have been identified by the laboratory, and no information or data have been knowingly withheld that would affect the quality of the data.

Nancy McLain
Project Manager

Guide to Reading and Understanding Your Laboratory Report

The information below is designed to better explain the various terms used in your report of analytical results from the Laboratory. This is not intended as a comprehensive explanation, and if you have additional questions please contact your project representative.

Abbreviations and Definitions

Coef1	First Order Coefficient.
Coef2	Second Order Coefficient.
Corr.	Correlation Coefficient.
Incpt	Intercept.
MDL	Method Detection Limit.
RDL	Reported Detection Limit.
Rec.	Recovery.
RPD	Relative Percent Difference.
RSD	Relative Standard Deviation.
SDG	Sample Delivery Group.
Analyte	The name of the particular compound or analysis performed. Some Analyses and Methods will have multiple analytes reported.
Dilution	If the sample matrix contains an interfering material, the sample preparation volume or weight values differ from the standard, or if concentrations of analytes in the sample are higher than the highest limit of concentration that the laboratory can accurately report, the sample may be diluted for analysis. If a value different than 1 is used in this field, the result reported has already been corrected for this factor.
Limits	These are the target % recovery ranges or % difference value that the laboratory has historically determined as normal for the method and analyte being reported. Successful QC Sample analysis will target all analytes recovered or duplicated within these ranges.
Qualifier	This column provides a letter and/or number designation that corresponds to additional information concerning the result reported. If a Qualifier is present, a definition per Qualifier is provided within the Glossary and Definitions page and potentially a discussion of possible implications of the Qualifier in the Case Narrative if applicable.
Result	The actual analytical final result (corrected for any sample specific characteristics) reported for your sample. If there was no measurable result returned for a specific analyte, the result in this column may state “ND” (Not Detected) or “BDL” (Below Detectable Levels). The information in the results column should always be accompanied by either an MDL (Method Detection Limit) or RDL (Reporting Detection Limit) that defines the lowest value that the laboratory could detect or report for this analyte.
Slope	Slope of calibration curve.
Uncertainty (Radiochemistry)	Confidence level of 2 sigma.
Case Narrative (Cn)	A brief discussion about the included sample results, including a discussion of any non-conformances to protocol observed either at sample receipt by the laboratory from the field or during the analytical process. If present, there will be a section in the Case Narrative to discuss the meaning of any data qualifiers used in the report.
Quality Control Summary (Qc)	This section of the report includes the results of the laboratory quality control analyses required by procedure or analytical methods to assist in evaluating the validity of the results reported for your samples. These analyses are not being performed on your samples typically, but on laboratory generated material.
Sample Chain of Custody (Sc)	This is the document created in the field when your samples were initially collected. This is used to verify the time and date of collection, the person collecting the samples, and the analyses that the laboratory is requested to perform. This chain of custody also documents all persons (excluding commercial shippers) that have had control or possession of the samples from the time of collection until delivery to the laboratory for analysis.
Sample Results (Sr)	This section of your report will provide the results of all testing performed on your samples. These results are provided by sample ID and are separated by the analyses performed on each sample. The header line of each analysis section for each sample will provide the name and method number for the analysis reported.
Sample Summary (Ss)	This section of the Analytical Report defines the specific analyses performed for each sample ID, including the dates and times of preparation and/or analysis.

Qualifier	Description
J	The identification of the analyte is acceptable; the reported value is an estimate.
J6	The sample matrix interfered with the ability to make any accurate determination; spike value is low.
P1	RPD value not applicable for sample concentrations less than 5 times the reporting limit.

Pace National is the only environmental laboratory accredited/certified to support your work nationwide from one location. One phone call, one point of contact, one laboratory. No other lab is as accessible or prepared to handle your needs throughout the country. Our capacity and capability from our single location laboratory is comparable to the collective totals of the network laboratories in our industry. The most significant benefit to our one location design is the design of our laboratory campus. The model is conducive to accelerated productivity, decreasing turn-around time, and preventing cross contamination, thus protecting sample integrity. Our focus on premium quality and prompt service allows us to be YOUR LAB OF CHOICE.
* Not all certifications held by the laboratory are applicable to the results reported in the attached report.
* Accreditation is only applicable to the test methods specified on each scope of accreditation held by Pace National.

RE: Project: 216 S. College / 19-146
Pace Project No.: 50227372

Dear Mr. Teuschler:
Enclosed are the analytical results for sample(s) received by the laboratory on June 07, 2019. The results relate only to the samples included in this report. Results reported herein conform to the most current, applicable TNI/NELAC standards and the laboratory's Quality Assurance Manual, where applicable, unless otherwise noted in the body of the report.

If you have any questions concerning this report, please feel free to contact me.

Sincerely,

Regina Bedel

QUALIFIERS

Project: 216 S. College / 19-146
Pace Project No.: 50227372

DEFINITIONS

DF - Dilution Factor, if reported, represents the factor applied to the reported data due to dilution of the sample aliquot.

ND - Not Detected at or above adjusted reporting limit.

TNTC - Too Numerous To Count

J - Estimated concentration above the adjusted method detection limit and below the adjusted reporting limit.

MDL - Adjusted Method Detection Limit.

PQL - Practical Quantitation Limit.

RL - Reporting Limit - The lowest concentration value that meets project requirements for quantitative data with known precision and bias for a specific analyte in a specific matrix.

S - Surrogate

1,2-Diphenylhydrazine decomposes to and cannot be separated from Azobenzene using Method 8270. The result for each analyte is a combined concentration.

Consistent with EPA guidelines, unrounded data are displayed and have been used to calculate % recovery and RPD values.

LCS(D) - Laboratory Control Sample (Duplicate)

MS(D) - Matrix Spike (Duplicate)

DUP - Sample Duplicate

RPD - Relative Percent Difference

NC - Not Calculable.

SG - Silica Gel - Clean-Up

U - Indicates the compound was analyzed for, but not detected.

N-Nitrosodiphenylamine decomposes and cannot be separated from Diphenylamine using Method 8270. The result reported for each analyte is a combined concentration.

Pace Analytical is TNI accredited. Contact your Pace PM for the current list of accredited analytes.

TNI - The NELAC Institute.

LABORATORIES

PASI-I	Pace Analytical Services - Indianapolis

ANALYTE QUALIFIERS

H3	Sample was received or analysis requested beyond the recognized method holding time.
M0	Matrix spike recovery and/or matrix spike duplicate recovery was outside laboratory control limits.
R1	RPD value was outside control limits.

Glass

DG9B	40mL Na Bisulfate amber vial	AG0U	100mL unpreserved amber glass
DG9H	40mL HCL amber voa vial	AG1H	1 liter HCL amber glass
DG9M	40mL MeOH clear vial	AG1S	1 liter H2SO4 amber glass
DG9P	40mL TSP amber vial	AG1T	1 liter Na Thiosulfate amber glass
DG9S	40rnL H2SO4 amber vial	AG1U	1liter unpreserved amber glass
DG9T	40mL Na Thio amber vial	AG2N	500mL HNO3 amber glass
DG9U	40mL unpreserved **amber** vial	AG2S	500mL H2SO4 amber glass
VG9H	40mL HCL clear vial	AG2U	500mL unpreserved amber glass
VG9T	40mL Na Thio. clear vial	AG3S	250mL H2SO4 glass amber
VG9U	40mL unpreserved **clear** vial	AG3U	250mL unpreserved amber glass
VGFX	40mL w/hexane wipe vial	BG1H	1 liter HCL clear glass
VSG	Headspace septa vial & HCL	BG1S	1 liter H2SO4 clear glass
WGKU	8oz unpreserved clear jar	BG1T	1 liter Na Thiosulfate clear glass
WGFU	4oz clear soil jar	BG1U	1 liter unpreserved glass
JGFU	4oz unpreserved amber wide	BG3H	250mL HCl Clear Glass
		BG3U	250mL Unpreserved Clear Glass

Plastic / Misc.

BP1A	1 liter NaOH, Asc Acid plastic
BP1N	1 liter HNO3 plastic
BP1S	1 liter H2SO4 plastic
BP1U	1 liter unpreserved plastic
BP1Z	1 liter NaOH, Zn, Ac
BP2A	500mL NaOH, Asc Acid plastic
BP2N	500mL HNO3 plastic
BP2O	500mL NaOH plastic
BP2S	500mL H2SO4 plastic
BP2U	500mL unpreserved plastic
BP2Z	500mL NaOH, Zn Ac
BP3B	250mL NaOH plastic
BP3N	250mL HNO3 plastic
BP3S	250mL H2SO4 plastic
BP3U	250mL unpreserved plastic
BP3Z	250mL NaOH, Zn Ac plastic

AF	Air Filter
C	Air Cassettes
R	Terra core kit
SP5T	120mL Coliform Na Thiosulfate

1.0 SUMMARY

BCA Environmental Consultants, LLC (BCA) has performed a Phase I Environmental Site Assessment (ESA) of the north section of the parking lot (Sicks Parking Lot) located at 216 S. College Ave., Bloomington, Monroe County, Indiana 47404 (Subject Property). The work was conducted within the framework of the ASTM 1527-21 and the All Appropriate Inquiry (AAI) Standards. The Subject Property is bounded by commercial and residential properties.

The Subject Property was historically utilized as a filling station from 1927 until it was converted into a parking lot between 1955 and 1963. In total, five (5) gas tanks were observed on historical fire insurance maps of the Subject Property. The Subject Property was still being utilized as a parking lot during the Site reconnaissance. The Subject Property is currently owned by Thomas Sicks & Nancy Held.

This assessment has revealed evidence of the following Recognized Environmental Conditions (RECs) or Vapor Encroachment Conditions (VECs) currently in connection with the Subject Property:

Parking Lot (Subject Property), 216 S. College Avenue
A Phase II ESA was conducted on the Subject Property in 2019 (BCA, 2019b). The results of the sampling and analyses confirmed that soil and groundwater on the Subject Property had been impacted by the historical handling and distribution of petroleum products. Most notable was the presence of petroleum related compounds in the groundwater at the two (2) probes. Benzene, 1-methylnaphthalene, and naphthalene were detected on the Subject Property at concentrations exceeding the R2 Residential HHL. Regarding soils, arsenic, benzene, naphthalene, 1,2,4-trimethylbenzene, 1,3,5-trimethylbenzene were detected at concentrations exceeding the RCG Migration to Groundwater (MTGW) SLs.

- The detection of elevated concentrations of petroleum related compounds in the soil and groundwater at the Subject Property during the Phase II ESA in 2019 is a REC and a VEC.

- The historical utilization of the Subject Property as a gasoline filling station that operated on the Subject Property with multiple gasoline tanks from the 1920s through at least the late 1950s with no documentation of proper closure is a REC and a VEC.

- The historical presence of a battery and ignition service station on the Subject Property in the late 1940s, with no information of the operations is a REC.

See sections 7.1 through 7.3 of this report for details of BCA's findings, opinions, and conclusions.

2.0 INTRODUCTION

2.1 Location and Legal Description

The parking lot at 216 S. College Avenue (Subject Property) is comprised of one (1) parcel of land (#53-05-33-310-243.000-005), totaling approximately 0.4 acres in size, and situated in the SW ¼ of the SW ¼ of the SW ¼ of Section 33, Township 9N, Range 1W in Bloomington, Monroe County, Indiana. The Subject Property is currently owned by "Sicks, Thomas & Held, Nancy" and has a legal street address of N. College Ave. Bloomington, Indiana, 47404 (**Figures 1** - **2**).

2.1.1 Site and Vicinity General Characteristics

The Subject Property is a commercial parking lot and the surrounding area is predominantly commercial in nature.

2.1.2 Current Uses of the Property

The Subject Property is currently being utilized as a parking lot.

2.1.3 Descriptions of Structures, Roads, Other Improvements

The Subject Property contains approximately 17,424 ft^2 of paved parking with curb cuts onto W. 4th Street. The Subject Property has electricity, natural gas, and city water and sewer services available to it.

2.1.4 Current Uses of the Adjoining Properties

The Subject Property is bordered generally by commercial office space to the west; commercial retail stores to the north across W. 4th Street; restaurants to the east across College Avenue; and a continuation of the parking lot to the south.

2.2 Purpose

BCA was requested and authorized by Mr. Alex Crowley, Director, Office of Economic and Sustainable Development, City of Bloomington, Indiana to perform a Phase I Environmental Site Assessment (ESA) of the parking lot located at 216 S. College Avenue in Bloomington, Indiana. This report is prepared for the City of Bloomington Redevelopment Commission (User) and the City of Bloomington and is funded through a U.S. EPA Brownfield Assessment Grant to the City of Bloomington (Cooperative Agreement No. BF-00E03051). This report presents the information obtained during the investigation and provides findings, opinions, and conclusions based on the information.

2.3 Detailed Scope-Of-Services

BCA performed this Phase I Environmental Site Assessment pursuant to the scope of work requested by the client. This work was performed in accordance with the "Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process," ASTM E1527-21 (the Standard) with the exceptions noted in Section 2.5 below and the All Appropriate Inquiry (AAI) standard codified at 40 CFR 312 as updated December 21, 2021. To accomplish the goals set forth in the Standard and AAI, BCA personnel conducted historical research, a review of public records,

interviews, and a site visit.

The scope of historical research conducted by BCA in the preparation of this Phase I site assessment included a search of Sanborn Fire Insurance Map coverage for the area of and around the Subject Property, a review of available city directory listings for addresses near the subject property, a review of historical aerial photographs of the subject property and surrounding land, a review of available Property Tax Records, and a review of available building permits.

The public records search included, but is not limited to, an examination of US EPA and Indiana Department of Environmental Management (IDEM) computer databases for sites that fall within the search radii that are published in the Standard. An effort was made to find specific information about the Subject Property and adjoining sites identified in this database search that could have an impact on the Subject Property. This effort included a review of files that are available online on the IDEM Virtual File Cabinet (VFC).

The site visit portion of the assessment included an inspection of the Subject Property and those parts of neighboring properties that could be seen from public rights-of-way around and near the Subject Property. Appropriate notes and photographs were obtained pursuant to the Standard.

2.4 Significant Assumptions

Assumptions made in the preparation of this report include the assumption that the environmental records obtained from the IDEM and US EPA internet sites are complete and up-to-date. It also has been assumed that information on groundwater flow and vapor migration in an area can *in general* be extrapolated from the local topography, surface drainage, investigations from local LUST, State Clean-up, and VRP sites, and published reports. BCA has assumed that all persons that were interviewed for this report have been truthful in their answers.

2.5 Limitations and Exceptions

BCA based the conclusions of this Phase I report upon the information described herein subject to the limitations attached to or described in the report. Because of the limited nature of the inquiry, BCA makes no warranties; either expressed or implied, that the site is free of contamination. BCA does warrant, however, that it performed this assessment in accordance with the level of care and skill ordinarily exercised by other persons or entities currently performing similar work and practicing under similar conditions.

2.6 Special Terms and Conditions

No Special terms or conditions apply to this Phase I report.

2.7 User Reliance

BCA makes this report for the benefit of the City of Bloomington Redevelopment Commission (User) and the City of Bloomington who may rely upon it. A copy of the

report may be given to a lender, investor or purchaser of the property covered by the report. Reliance by any third party on this report is prohibited without approval by BCA. The reliance on this report by any person or party (other than the User) is limited by the ASTM standard since a third party is not the User and has not fulfilled User Obligations. ASTM E1527-21 specifies that a report completed less than 180 days previously is presumed to be valid.

3.0 USER PROVIDED INFORMATION

3.1 Chain of Ownership

No title search or related information was provided by the User. However, a Property Report Card (PRC) with partial ownership history was obtained from the Monroe County GIS Web site. According to the PRC, the current owner of the Subject Property is Thomas Sicks & Nancy Held.

According to the PRC, the immediate past owner of the Subject Property is Marilyn A. Sicks.

Refer to Section 4.4.4 for further information regarding property ownership history.

3.2 Environmental Liens

The User is not aware of any environmental liens or activity and use limitations (AULs) associated with the Subject Property. A search provided by *EDR* reported no environmental liens or AULs associated with the Subject Property (**Appendix B**). In addition, a search of the IDEM Institutional Controls (IC) Registry was conducted by BCA on April 7, 2023. No AULs were found for the Subject Property or immediately adjoining sites in the IDEM IC Registry.

3.3 Specialized Knowledge

No specialized knowledge was provided by the User for the preparation of this report.

3.4 Commonly Known or Reasonably Ascertainable Information

No commonly known or reasonably ascertainable information was used in preparation of this report.

3.5 Valuation Reduction for Environmental Issues

There is no known valuation reduction associated with the Subject Property and the User is not aware of any valuation reduction for environmental issues.

3.6 Owner, Property Manager, and Occupant Information

The Subject Property is currently owned by Thomas Sicks & Nancy Held and contains an approximately 17,424 ft^2 parking lot.

3.7 Reason for Performing Phase I

BCA makes this report for the benefit of the City of Bloomington Redevelopment Commission (User) and the City of Bloomington who may rely upon it. A copy of the report may be given to a lender, investor or purchaser of the property covered by the report. The reliance on this report by any person or party (other than the User) is limited by the ASTM standard since a third party is not the User and has not fulfilled User Obligations. ASTM E1527-21 specifies that a report completed less than 180 days previously is presumed to be valid.

The User completed and signed the AAI User Questionnaire provided in **Appendix C**.

4.0 RECORDS REVIEW

4.1 Standard Environmental Record Sources

Agency public records maintained by the Indiana Department of Environmental Management (IDEM) and made available on the internet through the Virtual File Cabinet (VFC) and those of the U.S. EPA available from electronic databases were searched on April 5, 2023 by BCA and *EDR* to determine if there had been any environmental reports, permits, incidents, or similar events specified in the ASTM 1527-21 Standard at or near the Subject Property. Pertinent records and search results are provided in **Appendix D**.

Based on our review of the records, it appears that:

a) No Federal NPL sites are currently located within one mile of the Subject Property.

b) No Federal Delisted NPL sites are currently located within one-half mile of the Subject Property.

c) No Federal CERCLIS (SEMS) sites are currently located within one-half mile of the Subject Property.

d) Two (2) Federal CERCLIS NFRAP (SEMS – Archive) sites are currently located within one-half mile of the Subject Property. See *EDR* Report in Appendix D for additional information.

e) Two (2) Federal RCRA Corrective Action sites are currently located within one mile of the Subject Property. See *EDR* Report in Appendix D for additional information.

f) Two (2) RCRA TSD facilities are located within one-half mile of the Subject Property. See *EDR* Report in Appendix D for additional information.

g) No RCRA hazardous waste generator sites are reported on the Subject Property or adjoining properties.

h) One (1) RCRA Non-Generator hazardous waste generator site is reported on the Subject Property or adjoining properties. See *EDR* Report in Appendix D and Section 4.2 below for additional information.

i) No Federal IC / EC registries are reported on the Subject Property or adjoining properties.

j) No Federal ERNS registries are reported for the Subject Property.

k) 22 state-listed cleanup sites are located within one-half mile of the Subject Property. See *EDR* Report in Appendix D for additional information.

l) No State records of reported spills were found for the Subject Property or adjoining properties.

m) Six (6) Solid Waste Landfill or solid waste disposal facilities are located within one-half mile of the Subject Property. See *EDR* Report in Appendix D for additional information.

n) No registered Underground Storage Tank (UST) sites are located on the Subject Property or on sites adjoining the Subject Property.

o) Nineteen (19) Leaking Underground Storage Tank (LUST) sites are located within one-half mile of the Subject Property. See *EDR* Report in Appendix D for additional information.

p) No State IC / EC registries are reported for the Subject Property or adjoining properties.

q) Two (2) State Voluntary Remediation sites are situated within one-half mile of the Subject Property. See *EDR* Report in Appendix D for additional information.

r) 29 State and U.S. Brownfield Program Site listings are situated within one-half mile of the Subject Property. See *EDR* Report in Appendix D for additional information.

s) 45 registered or Historic Drycleaner Site listings are situated within one-quarter mile of the Subject Property. See *EDR* Report in Appendix D for additional information.

t) No reported PFAS Sites are reported within one-quarter mile of the Subject Property.

4.2 Additional Environmental Records

BCA searched IDEM's VFC on April 7, 2023 for any environmentally significant reports associated with the Subject Property or adjoining sites. In addition, environmental reports of the Subject Property and nearby sites not found in the VFC were reviewed and summarized below.

Parking Lot (Subject Property), 216 S. College Avenue

No significant files were found in the IDEM VFC for the Subject Property. BCA completed a Phase I and Phase II ESA on the Subject Property and adjoining areas to the south and west in 2019 (BCA, 2019a & BCA, 2019b). A total of two (2) soil and

groundwater probes were advanced throughout the Subject Property and soil and groundwater were sampled for VOCs, PAHs, SVOCs, and metals. The results of the sampling & analyses confirmed that soil and groundwater on the Subject Property has been impacted by the historical handling and distribution of petroleum products. Most notable was the presence of petroleum related compounds in the groundwater at the two (2) probes. Benzene, 1-methylnaphthalene, and naphthalene were detected on the Subject Property at concentrations exceeding the R2 Residential HHL. Regarding soils, arsenic, benzene, naphthalene, 1,2,4-trimethylbenzene, 1,3,5-trimethylbenzene were detected at concentrations exceeding the RCG Migration to Groundwater (MTGW) SLs.

It is unclear if the petroleum impacts have migrated off-site, although it is possible. In addition, there does not appear to be an immediate potential for vapor migration exposure on the Subject Property or within the surrounding area from the results at the locations sampled.

Josephine Brown Trust Property, 211 & 213 S. College Avenue
This property is located about 75 feet east of the Subject Property across College Avenue. According to documentation, this site has operated as an automotive dealership, auto repair shop, gasoline service station, and automotive rental facility. A total of seven (7) underground storage tanks were removed from the site in 1995. A total of 1,600 tons of contaminated soil were removed from the site for proper disposal. Eight (8) monitoring wells were installed on-site and screened near the soil/bedrock interface at approximately 15 feet below ground surface. All monitoring wells produced water with acceptable concentration levels except for one. MW-7 appears to produce water with elevated levels of PCE and TCE. These findings are reported in a site remediation report dated July 16th, 1997. A brownfields Site Status Letter was granted to the site in October 1998, indicating that "there is no risk of exposure to any chemical of potential concern at the property, and the reuse of the property is not expected to pose any additional risk to human health or result in any additional harm to the environment". VFC Documents # 14582194 & 15433359.

4.3 Physical Setting

As estimated from the U.S. Geologic Survey 7.5 Minute Series Topographic Quadrangle Map for Bloomington, Indiana (2013; C.I. = 10 feet), the elevation of the site is approximately 750 feet above mean sea level, relative to the North American Vertical Datum of 1988. The Subject Property is situated on relatively level terrain. Surface drainage in the overall area of the Subject Property is generally to the south-southeast toward Clear Creek located 0.4 miles southeast of the Subject Property. However, surface drainage at the Subject Property is influenced somewhat by the adjacent streets and municipal storm water system.

4.3.1 Soils

As described in the *Web Soil Survey, Soil Resource Report for Monroe County, Indiana Parking Lot-216 S. College Ave.,* and accessed on April 6, 2023, there is one (1) soil map unit within the Subject Property:

Ua Udorthents, loamy 100%
Udorthents are human-altered and human-transported (HAHT) soils and materials. HAHT soils include those intentionally and substantially modified by humans for specific purposes (e.g., terraced agriculture, building support, mining, transportation, etc.). They do not include soils modified through standard agricultural practices (such as shallow plowing, liming, and fertilization) or farmed soils with unintended wind and water erosion (Web Soil Survey, **Appendix E**).

4.3.2 Surficial Geology
The area of the Subject Property is underlain by approximately 5 to 15 feet of unconsolidated deposits that lie on Mississippian age bedrock (Fenelon, et al, 1994). Total thickness of unconsolidated deposits overlying bedrock in Monroe County is commonly reported as 6 to 25 feet. The unconsolidated sediments consist of Terra Rossa – red, clayey regolith, 5 to 50 feet thick, over limestone of Middle Mississippian age.

4.3.3 Bedrock Geology
The Subject Property and surrounding area lie within the Mitchell Plateau physiographic unit within the Southern Hills and Lowlands regional physiographic province (Gray, 2000). The Mitchell Plateau is bounded by the older rocks of Norman Upland on the east and the younger rocks of the Crawford Upland to the west. The Mitchell Plateau (also referred to as the Mitchell Plain) is a karst area in Indiana of relatively low relief. An extensive underlying cave system developed in Mississippian age limestone bedrock. Surface drainage is rare due to most streams in the area disappearing into caves or joints within the rock.

Bedrock at the site is reported to be the Mississippian-aged Sanders Group (that includes the Harrodsburg and Salem Limestones). The Sanders Group consists of a variety of carbonate rocks in complex facies relationships. The Ramp Creek and Muldraugh Formations at the base of the group are dominantly a mixture of fine-grained dolomite and limestone. Cherty and siliceous intervals are common, and minor amounts of siltstone and shale are present. Above that interval in the Harrodsburg Limestone, well-cemented bioclastic calcarenites and calcirudites are dominant over argillaceous limestone, dolosiltites, and shale. The abundance of geodes and chert decreases upward in the group. The Salem Limestone except for the Somerset Shale Member at its base is dominated by porous calcarenite, although it contains a wide variety of other kinds of limestone.

4.3.4 Hydrology
Surface Water
The Subject Property lies within the East Fork White River basin, which has a total drainage area of 5,746 square miles in south-central Indiana. In general, drainage of the Mitchell Plain (including the Subject Property) in Monroe County is considerably different from the rest of the basin; most runoff quickly leaves the surface by entering sinkholes and becoming part of the ground-water system. In

the streams that do flow across the Mitchell Plain, some surface water is intercepted by swallow holes and diverted underground into either the groundwater system or subterranean channels. Surface water drainage from the Subject Property flows southeast into Clear Creek, located 0.16 miles to the southeast.

Unconsolidated Aquifer System
The Subject Property lies in the Dissected Till and Residuum / Unglaciated Southern Hills and Lowlands Aquifer System. Total thickness of unconsolidated deposits overlying bedrock is commonly 6 to 25 feet. Clay material dominates this unconsolidated aquifer system; however, discontinuous sand or gravel deposits are reported. These deposits are commonly 1 to 3 feet thick. Because of low permeability of surface materials, this system is not considered very susceptible to contamination from surface sources.

Bedrock Aquifer System
The Blue River and Sanders Groups occur as the uppermost bedrock aquifer system over most of the west-central portion of Monroe County. Depth to bedrock is generally between 5 and 30 feet. The Blue River and Sanders Groups Aquifer System is not regarded as a major ground-water resource in the county. Static water levels range from 0 feet to 197 feet below land surface but generally between 15 and 75 feet below surface. Areas of shallow bedrock, especially where joints, fractures, and solution features are present, may allow contamination. These conditions warrant considering the aquifer system to be susceptible to contaminants introduced at and near land surface.

A report pertaining to the nearby Indiana Gas Company site 200 feet to the west of the Subject Property suggests the groundwater flow direction is to the southeast (VFC Document # 47437557). Based on environmental reports for the Josephine Brown Trust Property 75 feet east of the Subject Property, local groundwater flow around the Subject Property is to the south to southeast (VFC Document # 14582194). The regional groundwater flow in the area is predominately to the south in general conformance with surface topography/drainage and the regional attitude of underlying bedrock.

4.4 Historical Use Information on the Property

4.4.1 Sanborn Fire Insurance Maps

Sanborn Fire Insurance Maps were searched by *EDR* on April 6, 2023, and reviewed by BCA. Maps covering the Subject Property for the years 1883, 1887, 1892, 1898, 1907, 1913, 1927, 1947, and 1963 were reviewed. Copies of the Sanborn Maps are included in **Appendix F**. The descriptions for each map reviewed are provided below:

Sanborn Maps – 1883 & 1887
A residential dwelling is present on the northeastern corner of the Subject Property. Three structures are built on to the edges of this dwelling. Another small stable is

located on the southwestern corner of the Subject Property.

Sanborn Map - 1892
An additional dwelling is built on the southern edge of the Subject Property.

Sanborn Maps – 1898 & 1907
These maps show the Subject Property to be essentially the same as the 1892 map with the exception of a new stable shown along the western boundary of the Subject Property and a doctor's office is shown in the building on the northeast corner.

Sanborn Map - 1913
This map shows the Subject Property to be essentially the same as the 1907 map with the exception of the appearance of a new building in the northern boundary labelled "lunch" and "fish market".

Sanborn Maps - 1927
This map shows a new structure labeled "Filling Station" located in the central area of the Subject Property. Two (2) gas tanks are labeled in the northeast area of the Site.

Sanborn Maps – 1947
This map shows the filling station moved to the northeast corner of the Site. Three (3) new gas tanks appear in the southeastern area. A battery & ignition service building is visible on the southwestern corner of the Subject Property.

Sanborn Maps – 1963
In this map, the entire Subject Property is depicted as a parking lot.

4.4.2 Aerial Photos

Several aerial photos showing the Subject Property were available through EDR (searched April 6, 2023) and were reviewed by BCA. Aerial photographs for the following years were reviewed: 1939, 1941, 1946, 1952, 1955, 1965, 1967, 1977, 1983, 1986, 1992, 1998, 2005, 2008, 2012, 2016, and 2020. Copies of the aerial photos are included in **Appendix G**. The descriptions for each photo reviewed are written below.

1939 - 1955 Aerial Photographs
These photos indicate that there appear to be two (2) main structures on the Subject Property. The structure on the northeast corner appears to be similar to that of a filling station, but the photo resolution is insufficient to discern much detail.

1965 – 2020 Aerial Photographs
These photos indicate that the Subject Property is being utilized as a parking lot.

4.4.3 City and County Directories

A search of city and county directories was performed by *EDR* on April 10, 2023 and reviewed by BCA. Directories were searched from 1960 (the earliest reviewed) through 2020 for the Subject Property. Results of the search are included in **Appendix H** and summarized in the table below. There were no environmentally significant results found on the Subject Property during the city directory search.

Address	Occupant	Years Listed
216 S. College	KRC Banquet & Catering	2010 - 2017
	City Grille	2000 - 2005
	Reliable Drug Store	1992
	Peoples Drug Co. Inc.	1986
	Haag Drug Co Inc.	1960 - 1981

4.4.4 Ownership History

Chain of Title for the Subject Property was not provided to BCA by the User. Based on the information obtained from the Monroe County Tax Assessor GIS property report card, the Subject Property is currently owned by "SICKS, THOMAS & HELD, NANCY". Information on former owners is listed below:

Parcel #	Owner	Dates
53-05-33-310-243.000-005	SICKS, THOMAS & HELD, NANCY	03/2009 to present
53-05-33-310-243.000-005	SICKS, MARILYN A.	09/1977 to 03/2009
53-05-33-310-243.000-005	WOODY, KATHRYN B	Unknown to 09/1977

No other information regarding previous ownership was found.

4.4.5 Other Records of Historical Use

No other records of historical use were found.

4.5 Historical Use Information on Adjoining Properties

4.5.1 Sanborn Fire Insurance Maps

Sanborn Fire Insurance Maps were searched by *EDR* on April 6, 2023 and reviewed by BCA. Maps covering the Subject Property and adjoining properties for the years 1883, 1887, 1892, 1898, 1907, 1913, 1927, 1947, and 1963 were reviewed. Copies of the Sanborn Maps are included in **Appendix F**. The descriptions for each map reviewed are provided below:

Sanborn Maps – 1883 & 1887

These maps show a blacksmith and wood shop north of the Subject Property and a livery adjoining to the west of the Subject Property. This map doesn't include the

area south of the Subject Property.

Sanborn Map - 1892
This map is essentially the same as the 1887 map with the exception that the blacksmith and wood shop north of the Subject Property has been replaced by a billiards hall.

Sanborn Maps – 1898 & 1907
These maps are essentially the same as the 1892 map with the exception that there is a tin shop north of the Subject Property.

Sanborn Map - 1913
This map is essentially the same as the map from 1907 with the exception of Hughes Bro's Lumber & Coal Yard, including a planning mill, adjoining the south boundary of the Subject Property.

Sanborn Map - 1927
This map is essentially the same as the map from 1913 with the exception of Hughes Bro's Lumber & Coal Yard replacing the livery that adjoined the west boundary of the Subject Property.

Sanborn Maps – 1947 & 1963
These maps indicate that an auto garage replaced the tin shop north of the Subject Property. Also, the lumber yard south of the Subject Property was replaced by a parking lot in 1963.

4.5.2 Aerial Photos

Several aerial photos for the area surrounding the Subject Property were available through *EDR* (searched April 6, 2023) and were reviewed by BCA. Aerial photographs for the following years were reviewed: 1939, 1941, 1946, 1952, 1955, 1965, 1967, 1977, 1983, 1986, 1992, 1998, 2005, 2008, 2012, 2016, and 2020. Copies of the aerial photos are included in **Appendix G**. The descriptions for each photo are written below:

1939 – 1955 Aerial Photographs
In these photographs, the structures visible on properties surrounding the Subject Property appear consistent with other images/maps seen. Commercial type structures are visible in all directions surrounding the Subject Property. Contrast and resolution are insufficient to yield significant observations.

1965 Aerial Photograph
In this photograph, the parcel adjoining the south boundary of the Subject Property is being utilized as a parking lot. The parcel adjoining the west boundary of the Subject Property appears in its current configuration.

1967 – 2020 Aerial Photographs

The area immediately surrounding the Subject Property appears essentially the same as its current configuration, with commercial properties to the north, east, and west.

4.5.3 City and County Directories

A search of city and county directories was performed by *EDR* on April 10, 2023 and reviewed by BCA. Directories were searched from 1960 (the earliest reviewed) through 2017 for the area surrounding the Subject Property. Results of the search are included in **Appendix H**. The table below summarizes the occupants of the adjoining and nearby properties which are relevant to this investigation.

Address	Occupant	Years Listed
108 S. College Ave.	Davis Cleaners & Tailors	1960
211 S. College Ave.	Jerry's Diagnostic Center (Auto Repair)	1986-1995
211 S. College Ave.	Frosty's Dodge Inc. (Auto)	1981
211 S. College Ave.	Sciscoe Dodge Inc. (Auto Dealer)	1971-1976
211 S. College Ave.	Brown Paul Motor Sales (Auto Dealer)	1960-1968
223 S. College Ave.	Brown's Standard Service Gas Station	1968
223 S. College Ave.	Walker Standard Service Station (Gas Station)	1960-1964
301 S. College Ave.	Bloomington Tire Co.	1964-2005
301 S. College Ave.	Bloomington Auto Service Center	1971-1981
302 S. College Ave.	Tom O'Daniel Motor Sales	1964-1986
104 W. 4th St.	Bloomington Fire Department	1964 - 1992
210 W. 4th St.	PPG Industries	1968-1971

5.0 SITE RECONNAISSANCE

5.1 Methodology and Limiting Conditions

A site reconnaissance was conducted on April 6, 2023 by Mr. Jacob Teuschler, Project Manager for BCA. The site visit included observation of the Subject Property and adjoining sites for environmentally significant items, such as transformers, storage tanks, unusual cracks or ground discoloration, as well as significant commercial or industrial activity. Photographs were taken of conditions at the time of the site visit. During the site visit evaluation of adjoining properties were limited to observations from public rights-of-way or other public areas.

Notes of observations made during the site visit were made in a notebook and/or marked on a site map. Photographs were taken of items of interest.

5.2 General Site Setting

The Subject Property is situated in the City of Bloomington in a commercial area.

5.3 Exterior Observations

The Subject Property is currently utilized as an approximately 17,424 ft^2 parking lot (photos 1-3). City water, electricity, gas, and sewer services are currently available to the Subject Property.

The following were **not observed** to be present during the exterior reconnaissance of the Subject Property:

- Use or storage of hazardous chemicals.
- Petroleum products (including vent pipes and fill ports)
- Above Ground Tanks (ASTs)
- Underground Storage Tanks (USTs)
- Solvents
- Degreasers
- Drums
- Drains
- Unidentified containers
- Ground staining
- Corrosion
- Sumps
- Pits
- Ponds
- Lagoons
- Stained vegetation
- Solid waste
- Wastewater systems
- Air emissions
- Odors
- Pools of liquid

- Wells
- Septic systems
- Electrical Transformers

5.4 Interior Observations

There are no interior spaces on the Subject Property.

5.5 Observations on Adjacent Properties

Commercial retail outlets and a hotel adjoin the Subject Property across 4th Street to the north/northwest, commercial services adjoin to the east across S. College Ave., a parking lot adjoins the Subject Property to the south, and a commercial office building adjoins to the west of the Subject Property (photos 4-9).

- One (1) set of three pole-mounted electrical transformers were observed on the parcel adjoining the Subject Property to the west. The transformers were over a paved surface and the exterior of the transformers were stained black. No labeling or other indication of PCB content was visible on the transformers (photos 10-11).

The following were **not observed** to be present on adjoining properties during the reconnaissance of the Subject Property:

- Use or storage of hazardous chemicals
- Petroleum products
- ASTs
- USTs
- Solvents
- Degreasers
- Drums
- Drains
- Unidentified containers
- Ground staining
- Corrosion
- Sumps
- Pits
- Ponds
- Lagoons
- Stained vegetation
- Solid Waste
- Wastewater systems
- Septic Systems
- Air emissions
- Odors
- Pools of liquid
- Wells - potable or monitoring wells

6.0 INTERVIEWS

6.1 Interview with Site Owner

The Subject Property is currently owned and managed by Thomas Sicks & Nancy Held. Multiple attempts were made by BCA to contact the site owners for interviews and all were unsuccessful.

6.2 Interview with Site Manager

See Section 6.1 above.

6.3 Interview with Site Occupant

See Section 6.1 above.

6.4 Interview with Local Government Official

BCA contacted Monroe County Health Department (4/10/2023) requesting any information they might have concerning environmental issues for the Subject Property. Mr. Mike Kuzemka, Environmental Health Services Manager with the Monroe County Health Department, responded (4/11/2023) and indicated that they had one (1) report on file regarding a complaint. The report was released to BCA on 4/17/2023 and did not contain environmentally significant issues at the Subject Property.

6.5 Interview with Others

Mr. Alex Crowley, Director, Economic & Sustainable Development Department, City of Bloomington, and representative for Bloomington Redevelopment Commission, was interviewed via e-mail on April 11, 2023. Mr. Crowley indicated that he has no knowledge of any environmental cleanup liens or activity and land use limitations (AULs) associated with the Subject Property. Mr. Crowley stated that the purchase price for the property does reflect fair market value. Mr. Crowley is aware of the past uses of the property; however, he is not aware of any specific chemicals used, does not know of any spills or chemical releases, and is not aware of any environmental cleanups at the property. Mr. Crowley indicated that he is unaware of any obvious indicators of the presence or likely presence of a release or releases on the property. Mr. Crowley completed the AAI User Questionnaire (dated 4/11/2023). A signed copy of the questionnaire is provided in **Appendix C**.

7.0 EVALUATION

7.1 Findings

The ASTM Standard defines the term recognized environmental condition (REC) as "the presence of hazardous substances or petroleum products in, on, or at the subject property due to a release to the environment; the likely presence of hazardous substances or petroleum products in, on, or at the subject property due to a release or likely release to the environment; or the presence of hazardous substances or petroleum products in, on, or at the subject property under conditions that pose a material threat of a future release to the environment."

Phase I findings identify known or suspected environmental conditions associated with the property, including recognized environmental conditions (REC), controlled recognized environmental conditions (C-REC), historical recognized environmental conditions (H-REC), vapor encroachment conditions (VEC) and *de minimis* conditions, among other environmental conditions. *De minimis* conditions are those that are judged to not to present a material risk of harm to health or the environment. Controlled RECs include past releases that have been addressed to the satisfaction of the applicable regulatory authority, with contaminants allowed to remain in place subject to the implementation of required controls. Historical RECs include records of past releases that have been remediated to the satisfaction of the governing regulatory agency. VECs are potential releases that involve volatile organic compounds that could result in vapor intrusion to structures on the Subject Property. BCA's opinions regarding each of the findings below are listed in Section 7.2. The following environmental conditions were found during this investigation:

1. Parking Lot (Subject Property), 216 S. College Avenue
   The Subject Property was historically utilized as a filling station from 1927 until it was converted into a parking lot between 1955 and 1963. In total, five (5) gas tanks were observed on historical fire insurance maps of the Subject Property. The Subject Property was still being utilized as a parking lot during the Site reconnaissance.

   A Phase II ESA was conducted on the Subject Property in 2019 (BCA, 2019b). A total of two (2) soil and groundwater probes were advanced at the Subject Property and soil and groundwater were sampled for VOCs, PAHs, SVOCs, and metals. The results of the sampling and analyses confirmed that soil and groundwater on the Subject Property had been impacted by the historical handling and distribution of petroleum products. Most notable was the presence of petroleum related compounds in the groundwater at the two (2) probes. Benzene, 1-methylnaphthalene, and naphthalene were detected on the Subject Property at concentrations exceeding the R2 Residential HHL. Regarding soils, arsenic, benzene, naphthalene, 1,2,4-trimethylbenzene, 1,3,5-trimethylbenzene were detected at concentrations exceeding the RCG Migration to Groundwater (MTGW) SLs.

- The detection of high concentrations of petroleum related compounds in the soil and groundwater at the Subject Property during the Phase II ESA in 2019 is a REC and a VEC.

- The historical utilization of the Subject Property as a gasoline filling station that operated on the Subject Property with multiple gasoline tanks from the 1920s through at least the late 1950s with no documentation of proper closure is a REC and a VEC.

- The historical presence of a battery and ignition service station on the Subject Property in the late 1940s, with no information of the operations is a REC.

2. Josephine Brown Trust Property, 211 & 213 S. College Avenue
This site, located adjoining southeast of the Subject Property across S. College Avenue, historically operated as an automotive dealership, auto repair shop, gasoline service station, and automotive rental facility. A 1997 site remediation report indicated that seven (7) underground storage tanks were removed from the site in 1995, and a total of 1,600 tons of contaminated soil were removed from the site for disposal. In addition, a groundwater monitoring well on the site indicated elevated levels of PCE and TCE in groundwater. However, the site received a Site Status Letter from IDEM in October 1998 granting site closure with no restrictions for redevelopment. Since this site is downgradient to cross-gradient from the Subject Property, it is unlikely to have materially affected the environmental conditions of the Subject Property. This is a *de minimis* condition with respect to the Subject Property.

3. The following nearby sites were listed in the EDR report as being historical drycleaner sites:

    a. *College Laundry, 121 S. College Ave.* - was located 160' northeast of the Subject Property. It was referenced in the 1938 and 1945 Polk City Directories.

    b. *Sam Moy (College Ave Laundry), 119 S. College Ave.* - was located 180' northeast of the Subject Property. It was referenced in the 1913, 1916, 1918, 1920, 1922, 1929, 1931, and 1934 Caron's City Directories. It was also shown in the 1913 Sanborn Map.

    c. *Meister & Kinser, 115 S. College Ave.* - was located 220' northeast of the Subject Property. It was referenced in the 1922 and 1929 Caron's City Directories.

    d. *Beem & Morris, 108 S. College Ave.* - was located 230' north of the Subject Property. It was referenced in the 1929, 1931, and 1934 Caron's City Directories. It was also referenced in the 1945, 1948, 1950,

1952, and 1955 Polk City Directories.

No other information was found for each of these sites, and it is unknown if they were drycleaners and/or ever used/handled chlorinated solvents. However, chlorinated solvents were not detected in any of the soil/groundwater sampling probes installed during the 2019 BCA Phase II ESA (BCA, 2019b), therefore, it is unlikely that a release from any of these sites (if any) have materially affected the environmental conditions of the Subject Property. They are considered *di minimis* with respect to the Subject Site.

4. Other Sites
   In addition to the sites listed above, two (2) Federal CERCLIS NFRAP (SEMS – Archive) sites, two (2) RCRA Corrective Action sites, two (2) RCRA TSD sites, 22 State Listed Cleanup sites, six (6) Solid Waste Landfill or solid waste disposal facility sites, 19 LUST sites, two (2) Voluntary Cleanup sites, 27 State and U.S. Brownfield Program sites, and 41 historic drycleaner sites are located within the respective search radii of the ASTM and AAI Standard. However, these sites are located down-gradient from the Subject Property, have received No Further Action status, or are low priority w/ soil contamination only. As such, these sites are considered *de minimis* conditions with respect to the Subject Property.

7.2 Opinion

7.2.1 Contaminant Migration

Potentially, releases that occur on and near the Subject Property are likely to migrate vertically until contact with groundwater and then laterally in the down-gradient direction. Based on local surface topography, groundwater flow at the Subject Property is likely to be to the south-southeast toward Clear Creek, located 0.4 miles southeast of the Subject Property.

Because of the above considerations, releases at properties located to the northwest (up-gradient) of the Subject Property could potentially have an impact on the site. Releases at properties immediately adjoining to the northeast and southwest (cross-gradient) of the Subject Property could impact the Subject Property only if they are very near; however, releases farther away in these directions would not. Because radial spread of contaminants is common at the source, especially in the shallow soil or smear zone at the top of the water table, releases that took place very near the Subject Property may have affected it even if the site is down-gradient (southeast) of the Subject Property.

Vapors from releases to the groundwater could migrate through the subsurface via loose and unconsolidated soils, utility conduits and trenches, and disturbed or excavated soils. Vapors can accumulate beneath structures, asphalt and concrete pads or parking lots, and in poorly ventilated buildings. Vapors from sources and impacted groundwater near the Subject Property could impact structures around

the Subject Property. The current IDEM guidance indicates potential for vapor intrusion from groundwater impacted above screening levels at a lateral distance of 25-feet for petroleum and 100-feet for chlorinated volatile organic compounds.

7.2.2 Evaluation of Identified Environmental Conditions

This section presents BCA's opinions regarding RECs and VECs identified in Section 7.1.

Parking Lot (Subject Property), 216 S. College Avenue

The Subject Property was historically utilized as a filling station from 1927 until it was converted into a parking lot between 1955 and 1963. In total, five (5) gas tanks were observed on historical fire insurance maps of the Subject Property. The Subject Property was still being utilized as a parking lot during the Site reconnaissance.

A Phase II ESA was conducted on the Subject Property in 2019 (BCA, 2019b). The results of the sampling and analyses confirmed that soil and groundwater on the Subject Property had been impacted by the historical handling and distribution of petroleum products.

- The detection of high concentrations of petroleum related compounds in the soil and groundwater at the Subject Property during the 2019 Phase II ESA (BCA, 2019b) is likely related to the historical utilization of the Subject Property as a gasoline filling station. The concentrations of impacts exceeded R2 guidelines and have the potential to cause vapor intrusion issues.

- The historical presence of a battery and ignition service station on the Subject Property in the late 1940s, with no information of the operations is an environmental concern. However, no impacts from this operation were detected in the subsurface during the 2019 Phase II ESA (BCA, 2019b).

7.3 Conclusions

We have performed a Phase I Environmental Site Assessment of the Subject Property located at 216 S. College Ave., Bloomington, Indiana in conformance with the scope and limitations of ASTM Practice E1527-21. Exceptions to, or deletions from this practice are described in Section 2.5 of this report. Detailed findings and opinions regarding the Subject Property and surrounding sites are included in Sections 7.1 and 7.2 above.

Parking Lot (Subject Property), 216 S. College Avenue

The Subject Property was historically utilized as a filling station from 1927 until it was converted into a parking lot between 1955 and 1963. In total, five (5) gas tanks were observed on historical fire insurance maps of the Subject Property. The Subject Property was still being utilized as a parking lot during the Site

reconnaissance.

A Phase II ESA was conducted on the Subject Property in 2019 (BCA, 2019b). The results of the sampling and analyses confirmed that soil and groundwater on the Subject Property had been impacted by the historical handling and distribution of petroleum products. Most notable was the presence of petroleum related compounds in the groundwater at the two (2) probes. Benzene, 1-methylnaphthalene, and naphthalene were detected on the Subject Property at concentrations exceeding the R2 Residential HHL. Regarding soils, arsenic, benzene, naphthalene, 1,2,4-trimethylbenzene, 1,3,5-trimethylbenzene were detected at concentrations exceeding the RCG Migration to Groundwater (MTGW) SLs.

- The detection of elevated concentrations of petroleum related compounds in the soil and groundwater at the Subject Property during the Phase II ESA in 2019 is a REC and a VEC.

- The historical utilization of the Subject Property as a gasoline filling station that operated on the Subject Property with multiple gasoline tanks from the 1920s through at least the late 1950s with no documentation of proper closure is a REC and a VEC.

- The historical presence of a battery and ignition service station on the Subject Property in the late 1940s, with no information of the operations is a REC.

7.4 Deviations and Data Gaps

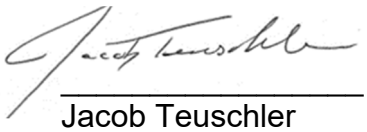
There have been no data gaps or deviations from the scope of work requested by the client during the preparation of this report.

7.5 Additional Services

No additional services beyond the scope of the ASTM Standard were provided in the preparation of this Phase I report. Examples of possible non-scope services are listed in Section 8.2.

7.6 Signatures of Environmental Professionals

I declare that, to the best of my professional knowledge and belief, I meet the definition of Environmental Professional as defined in 312.10 of 40 CFR 312. I have the specific qualifications based on education, training, and experience to assess a property of the nature, history, and setting of the subject property. I have developed and performed the all appropriate inquiries in conformance with the standards and practices set forth in 40 CFR Part 312.



Jacob Teuschler
Project Manager
May 31, 2023

8.0 NON-SCOPE SERVICES

8.1 Recommendations

Based on the conclusions of this Phase I ESA, BCA makes the following recommendations:

Conducting further investigation to address the RECs and VECs identified in Section 7 above.

8.2 Other Non-Scope Considerations

No other non-scope services beyond the recommendations above were provided in the preparation of this Phase I report. Additional services can include Business Environmental Risks (BERs) such as asbestos and lead-based paint surveys, radon gas assessment or EPA Radon Map, lead in drinking water, to name a few. Beyond BERs, other non-scope services can include FEMA flood plains maps, wetland inventory maps, and/or polyfluoroalkyl substances (PFAS) evaluation.

Bloomington, Indiana 47404

QUALIFICATIONS OF ENVIRONMENTAL PROFESSIONALS

JACOB TEUSCHLER, PROJECT MANAGER

Jacob Teuschler joined BCA as an Environmental Scientist in the summer of 2013. Mr. Teuschler has a Biology and Chemistry degree from the University of the Cumberlands. He has over 15 years of comprehensive environmental consulting experience performing a diverse range of environmental studies and overseeing related projects from inception to completion. Mr. Teuschler is experienced with site characterizations and environmental monitoring; remedial designs, engineered system optimization and maintenance, tank removals, permitting and reporting, soil, groundwater, and air sampling, analytical (health and ecological) site and risk assessments, sampling and safety protocols, corrective action plans, closure processes, habitat restorations and wetland delineations. Mr. Teuschler has prepared Phase I and Phase II ESA's, site characterization reports, corrective action plans, permit applications, NPDES reports, various closure reports, and demolition reports. Mr. Teuschler is a Licensed Asbestos Building Inspector.

EDR Environmental Lien and AUL Search

The EDR Environmental Lien and AUL Search Report provides results from a search of available current land title records for environmental cleanup liens and other activity and use limitations, such as engineering controls and institutional controls.

A network of professional, trained researchers, following established procedures, uses client supplied address information to:

- search for parcel information and/or legal description;
- search for ownership information;
- research official land title documents recorded at jurisdictional agencies such as recorders' offices, registries of deeds, county clerks' offices, etc.;
- access a copy of the deed;
- search for environmental encumbering instrument(s) associated with the deed;
- provide a copy of any environmental encumbrance(s) based upon a review of key words in the instrument(s) (title, parties involved, and description); and
- provide a copy of the deed or cite documents reviewed.

Thank you for your business.
Please contact EDR at 1-800-352-0050
with any questions or comments.

MEMO TO FILE

Date: March 16, 2023

From: Timothy E. Veatch, Petroleum Branch Chief

Re: Petroleum Eligibility
College Square
216 South College Avenue
Bloomington, Monroe County, Indiana
Brownfields #4190505

On May 19, 2019 the Indiana Department of Environmental Management (IDEM) made a determination that the former College Square (Site) located at the address noted above was eligible for federal brownfield grant funds to conduct assessment activities at the Site. (The May 19, 2019 Petroleum Eligibility Determination is attached as Exhibit A.) Those funds were expended for assessment of the Site in July 2019. The Site consists of two parcels; however, additional funds are requested for the parcel identified by #53-05-33-310-243.000-005 only. The parcel is no longer associated with the address noted above and is now associated with North College Avenue. The ownership of the parcel has not changed since the original eligibility and the parcel continues to be utilized as a parking lot. Additional funds are requested to conduct further site assessment activities to delineate petroleum impacts in soil and groundwater identified during the July 2019 investigation. The purpose of this memoranda is to serve as IDEM's determination that the Site remains eligible for U.S. EPA brownfields funds.

The Program has reviewed the current eligibility requirements for use of federal petroleum brownfields grant funding. The IDEM is unaware of any reasons why the City of Bloomington cannot move forward with the assessment at the Site using federal brownfield grant funds. If you have any questions, please call Susie Holmes at 317-232-6772 or email at sholmes1@ifa.in.gov.

Sincerely,

Timothy E. Veatch, Branch Chief
Petroleum Branch
Office of Land Quality

May 29, 2019

Brian Payne
City of Bloomington
401 N Morton Street
Bloomington, Indiana 47404

Re: Petroleum Eligibility
College Square
216 S. College Avenue
Monroe County, Indiana
BFD #4190505

Dear Mr. Payne:

This letter acknowledges that the City of Bloomington (City), pursuant to U.S. EPA grant requirements, notified the Indiana Department of Environmental Management (IDEM) of its plans to perform site assessment activities at the above referenced site (Site). The City provided information, including on ownership, regarding the potentially petroleum-contaminated Site and requested that IDEM make the necessary determination on eligibility for federal brownfields funding. Based on the information provided with the request or otherwise reviewed by IDEM, and using both the applicable federal guidelines and Indiana law and related policies, IDEM has determined the following with respect to the request:

I) The Site is not listed in IDEM's databases relating to underground storage tanks (USTs), and there are no reported releases for the Site. The Site is not being cleaned up by funds from the state Excess Liability Trust Fund (ELTF) or the federal Leaking Underground Storage Tank (LUST) trust fund, and is not subject to a response under the Oil Pollution Act.

II) IDEM is unaware that any responsible party (RP) has been identified through:

(a) A judgment in a court of law or an administrative body that would require that party assess, investigate or remediate the Site; or,

(b) A filed enforcement action brought by federal or state authorities, or is party to a citizen suit, that would, if successful, require that party to assess, investigate or clean up the Site; or,

(c) A citizen suit, contribution action or other third party claim brought against the current or immediate past owner for the site that would, if successful, require the assessment, investigation, or remediation of the Site.

III) The Site is not subject to any order issued under 9003(h) of the Solid Waste Disposal Act.

IV) The current owners, Rbowa, LLC, and Thomas Sicks and Nancy Held, (Current Owners), and the immediate past owners, Indiana University Foundation and Marilyn A. Sicks (Past Owners), did not dispense or dispose of, or own the Site during the dispensing or disposal of, any contamination at the Site and have taken reasonable steps with regard to stopping any potential petroleum releases, prevented any threatened future releases of petroleum and prevented or limited exposure to any previously released petroleum contamination at the Site. The Site consists of two parcels totaling 1.6 acres of land. The Current and Past Owners used the Site as a commercial parking lot since prior to 1962. Environmental concerns associated with the Site is the past usage as gasoline filling stations and automotive repair facilities in the 1920s through 1940s. Refer to the table below for a description of the Site's parcels, uses and ownerships.

Parcel and uses	**Current Owner**	**Dates**	**Immediate Past Owner**	**Dates**
53-05-33-310-240.000-005 (Commercial parking lot)	Rbowa, LLC	3/1/1995 - present	Indiana University Foundation	Unknown – 3/1/1995
53-05-33-310-243.000-005 (Commercial parking lot)	Thomas Sicks & Nancy Held	3/2/2009 - present	Marilyn A. Sicks	9/27/1977 – 3/2/2009

V) The City is a volunteer that is not potentially liable for the suspected petroleum contamination because it has not dispensed or disposed of or owned the property during the dispensing or disposing of petroleum or petroleum product at the Site. It has also not exacerbated the contamination at the Site and has taken reasonable steps with regard to the contamination at the Site.

VI) No information pertaining to RPs (or the financial viability of any RPs) was provided to IDEM as part of this request, and IDEM has no additional information suggesting there is a financially viable RP that will address contamination at the Site.

The information reviewed above is consistent with the determinations set forth in Section 101(39)(d)(II)(bb) of the Comprehensive Environmental Response, Compensation, and Liability Act. IDEM is unaware of any reasons why the City cannot move forward with the assessment at the Site using federal brownfield grant funds. If you have any questions, please call Katie Erny at 317-234-8099 or email at KErny@ifa.in.gov.

Sincerely,

John Morris, Branch Chief
Underground Storage Tanks Branch

All Appropriate Inquiry User Questionnaire

College Square – Sicks Parking Lot
216 S. College Avenue
Bloomington, Indiana 47404

ALL APPROPRIATE INQUIRY USER QUESTIONAIRE

PROJECT DESCRIPTION: Parking Lot PROJECT NO: 23-134

SITE ADDRESS: 216 S. College Avenue, Bloomington Indiana

In order to qualify for one of the *Landowner Liability Protections (LLPs)* offered by the Small Business Liability Relief and Brownfields Revitalization Act of 2001 (the "*Brownfields Amendments*"), the *user* must provide the following information (if available) to the *environmental professional*. Failure to provide this information could result in a determination that "*all appropriate inquiry"* is not complete.

(1.) Environmental cleanup liens that are filed or recorded against the site (40 CFR 312.25).

Did a search of *recorded land title records* (or judicial records where appropriate, see Note 1 below) identify any environmental liens filed or recorded against the *property* under federal, tribal, state or local law?

NOTE 1— In certain jurisdictions, federal, tribal, state, or local statutes, or regulations specify that environmental liens and AULs be filed in judicial records rather than in land title records. In such cases judicial records must be searched for environmental liens and AULs.

Yes No

(2.) Activity and land use limitations (AULs) that are in place on the site or that have been filed or recorded in a registry (40 CFR 312.26).

Did a search of *recorded land title records* (or judicial records where appropriate, see Note 1 above) identify any AULs, such as *engineering controls*, land use restrictions or *institutional controls* that are in place at the *property* and/or have been filed or recorded against the *property* under federal, tribal, state or local law?

Yes No

(3.) Specialized knowledge or experience of the person seeking to qualify for the LLP (40 CFR 312.28).

As the *user* of this *ESA* do you have any specialized knowledge or experience related to the *property* or nearby properties? For example, are you involved in the same line of business as the current or former *occupants* of the *property* or an adjoining *property* so that you would have specialized knowledge of the chemicals and processes used by this type of business? If yes, please describe as specifically as possible.

Yes No

(4.) Relationship of the purchase price to the fair market value of the *property* if it were not contaminated (40 CFR 312.29).

(a.) Does the purchase price being paid for this *property* reasonably reflect the fair market value?

Yes No

(b.) If you conclude that there is a difference, have you considered whether the lower purchase price is because contamination is known or believed to be present at the *property*?

Yes No
If yes, please explain:

(5.) Commonly known or *reasonably ascertainable* information about the *property* (40 CFR 312.30)
Are you aware of commonly known or *reasonably ascertainable* information about the *property* that would help the *environmental professional* to identify conditions indicative of releases or threatened releases? For example,
(a.) Do you know the past uses of the *property*?
Yes No

(b.) Do you know of specific chemicals that are present or once were present at the *property*?
Yes No

(c.) Do you know of spills or other chemical releases that have taken place at the *property*?
Yes No

(d.) Do you know of any environmental cleanups that have taken place at the *property*?
Yes No

(6.) The degree of obviousness of the presence of likely presence of contamination at the *property*, and the ability to detect the contamination by appropriate investigation (40 CFR 312.31).

As the *user* of this *ESA*, based on your knowledge and experience related to the *property* are there any *obvious* indicators that point to the presence or likely presence of releases at the p*roperty*?
Yes No
If yes, please describe as specifically as possible.

EXECUTIVE SUMMARY

A search of available environmental records was conducted by Environmental Data Resources, Inc (EDR). The report was designed to assist parties seeking to meet the search requirements of EPA's Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), the ASTM Standard Practice for Environmental Site Assessments (E 1527-13), the ASTM Standard Practice for Environmental Site Assessments for Forestland or Rural Property (E 2247-16), the ASTM Standard Practice for Limited Environmental Due Diligence: Transaction Screen Process (E 1528-14) or custom requirements developed for the evaluation of environmental risk associated with a parcel of real estate.

SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified in the following databases.

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property.
Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in ***bold italics*** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

STANDARD ENVIRONMENTAL RECORDS

Lists of Federal CERCLA sites with NFRAP

SEMS-ARCHIVE: SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that. based upon available information, the location is not judged to be potential NPL site.

A review of the SEMS-ARCHIVE list, as provided by EDR, and dated 01/25/2023 has revealed that there are 2 SEMS-ARCHIVE sites within approximately 0.5 miles of the target property.

Lists of Federal RCRA facilities undergoing Corrective Action

CORRACTS: CORRACTS is a list of handlers with RCRA Corrective Action Activity. This report shows which nationally-defined corrective action core events have occurred for every handler that has had corrective action activity.

A review of the CORRACTS list, as provided by EDR, and dated 03/06/2023 has revealed that there are 2

CORRACTS sites within approximately 1 mile of the target property.

Lists of Federal RCRA TSD facilities

RCRA-TSDF: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

A review of the RCRA-TSDF list, as provided by EDR, and dated 03/06/2023 has revealed that there are 2 RCRA-TSDF sites within approximately 0.5 miles of the target property.

Lists of Federal RCRA generators

RCRA-SQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month.

A review of the RCRA-SQG list, as provided by EDR, and dated 03/06/2023 has revealed that there is 1 RCRA-SQG site within approximately 0.25 miles of the target property.

RCRA-VSQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Very small quantity generators (VSQGs) generate less than 100 kg of hazardous waste, or less than 1 kg of acutely hazardous waste per month.

A review of the RCRA-VSQG list, as provided by EDR, and dated 03/06/2023 has revealed that there are

3 RCRA-VSQG sites within approximately 0.25 miles of the target property.

Other Ascertainable Records

RCRA NonGen / NLR: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or

dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

A review of the RCRA NonGen / NLR list, as provided by EDR, and dated 03/06/2023 has revealed that there are 12 RCRA NonGen / NLR sites within approximately 0.25 miles of the target property.

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR MGP: The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used

whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

A review of the EDR MGP list, as provided by EDR, has revealed that there is 1 EDR MGP site within approximately 1 mile of the target property.

Equal/Higher Elevation	Address	Direction / Distance	Map ID	Page
INDIANA GAS/BLOOMING	205 S MADISON STREET	W 0 - 1/8 (0.090 mi.)	F26	115

EDR Hist Auto: EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

A review of the EDR Hist Auto list, as provided by EDR, has revealed that there is 1 EDR Hist Auto site within approximately 0.125 miles of the target property.

Lower Elevation	Address	Direction / Distance	Map ID	Page
3RD ST SHELL	301 S WALNUT	ESE 0 - 1/8 (0.100 mi.)	E31	143

EDR Hist Cleaner: EDR has searched selected national collections of business directories and has collected listings of potential dry cleaner sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include dry cleaning establishments. The categories reviewed included, but were not limited to dry cleaners, cleaners, laundry, laundromat, cleaning/laundry, wash & dry etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

A review of the EDR Hist Cleaner list, as provided by EDR, has revealed that there is 1 EDR Hist Cleaner site within approximately 0.125 miles of the target property.

Latitude:	39.1651982
Longitude:	-86.5357277
HCM Label:	-
Map Scale:	-
Point of Reference:	-
Highlights:	Former Use: The Subject Site is a commercial office building property located at 216 S. College Avenue in Bloomington, Indiana. The current building occupants include the Campus Costume Store (retail) and Hilliard Lyons (wealth advisors). The large parcel (with the commercial building) on Subject Site is currently owned by Rbowa LLC. The two (2) small parcels located near the northeast portion of the Subject Site are owned by Thomas Sicks & Nancy Held. The large parcel is currently owned by the Bloomington Redevelopment Commission. The Subject Site had two (2) former gas stations that operated in the northeast quadrant of the Subject Site. Commercial Building & Parking Lot - Planned redevelopment includes the expansion of the convention center to include a 20K-30K sq foot expansion of the current convention center, $35-$45 million for the convention center expansion. This project is being planned in conjunction with the construction of a convention center garage on the 310 S College site; with a projected redevelopment costs of $17 million.
